Many Members of the House, including myself, relying upon the foregoing statement of the gentleman from North Carolina [Mr. BONNER], the chairman of the Merchant Marine and Fisheries Committee, the author of the bill, assumed, and I believe correctly, that this bill would not be brought out again unless it was done so under a rule.

It appeared clear to me that the bill had been withdrawn for all purposes and consideration from the floor of the House and would not reappear unless a rule was obtained.

On July 9 and 10, the Rules Committee held protracted hearings on this bill and, as of today, no rule has as yet been obtained, and to all intents and purposes the matter is still before the Rules Committee.

Yesterday, July 16, 1956, the bill again appeared on the Consent Calendar and was passed. The House convened at 12 noon. The passage of this bill took place sometime before 12:20 p. m.

My absence from the floor at the convening of the House yesterday was due to the following facts. At 10 a. m., an open meeting of the Merchant Marine and Fisheries Committee, of which the gentleman from North Carolina [Mr. BONNER], is chairman, was held for the resumption of labor hearings held in Los Angeles and Long Beach, Calif. The witnesses appearing before the committee were Paul St. Sure, president of the Pacific Maritime Association; Harry Bridges, president, International Longshoremen and Warehousemen's Union; and Ben McDonald, local 13, ILWU, San Pedro, Calif.

I arrived at the committee room at about 10:30 a. m. In the absence of the chairman, the gentleman from North Carolina [Mr. BONNER], and in the absence of the next ranking majority member, the gentleman from Alabama [Mr. BOYKIN], the meeting was being conducted by the acting chairman, the gentleman from Maryland [Mr. GARMATZ]. The committee was in session until just before noon.

I left the committee hearing several minutes before its recess. At no time during my attendance there was the chairman of the committee, the gentleman from North Carolina [Mr. BONNER], nor the ranking majority member, the gentleman from Alabama [Mr. BOYKIN], present. Thereupon, I went to a meeting of a large group of Members to discuss the civil rights bill, which was to be brought up on the floor.

The foregoing statement of my official congressional activities yesterday morning contains the reasons for my failing to be present at the opening of the House.

Sometime between 12:15 and 12:20 p. m., I entered the House Chamber and walked over to the committee table where I sat down next to the chairman of the Merchant Marine and Fisheries Committee, the gentleman from North Carolina, who was already there. Upon inquiry, he informed me that H. R. 11122 had been passed.

Thereafter, in order to indicate my further opposition to the measure, I requested unanimous consent to return H. R. 11122 to the floor for immediate consideration. The sole objection was made by the chairman of the Merchant Marine and Fisheries Committee, the gentleman from North Carolina [Mr. BONNER], the author of the bill. The following is a verbatim extract from the House RECORD, page 11745:

Mr. ZELENKO. Mr. Speaker, I ask unanimous consent to return for immediate consideration to Consent Calendar No. 626, the bill (H. R. 11122) to promote the development and rehabilitation of the coastwise trade, to encourage the construction of new vessels, and for other purposes.

Mr. BONNER. I object, Mr. Speaker.

Several hours later, almost at the conclusion of the session, I renewed the request. Objection was then made by the gentleman from Virginia [Mr. ROBESON]. The gentleman from North Carolina [Mr. BONNER], the author of the bill, was present in the House at the time and sitting alongside the gentleman from Virginia, who made the objection.

In conclusion, I direct your attention to the title page of Cannon's Procedure in the House of Representatives, House Document 562. On the lower portion of the page appears the following quotation:

BASSANIO. And I beseech you wrest once the law to your authority; to do a great right, do a little wrong.

PORTIA. It must not be; * * * 'twill be recorded for a precedent, and many an error by the same example will rush into the state.

A Year Since Geneva

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 10, 1956

Mr. DODD. Mr. Speaker, just a year ago the so-called summit conference was held in Geneva.

At that time, there were high hopes and great expectations in the United States and elsewhere in the free world that this meeting would lay a foundation for the easing of tensions and the beginnings of peace in the world.

In the year that has elapsed, none of these hopes or expectations has been realized; and instead, the forces of aggressive communism have made frightening progress while the forces of freedom and justice in the world have lost ground.

Mr. R. H. Shackford of the Scripps-Howard papers has written a scholarly and informative analysis of developments since the Geneva meeting, which appears in today's issue of the Washington News.

Mr. Shackford's article reads as follows, and I commend it to the attention of my colleagues:

A MINUS FOR THE WEST—A YEAR SINCE GENEVA
(By R. H. Shackford)

A year ago this week the leaders of the four great powers met for the first time in 10 years at Geneva in a mood of optimism. One year later that optimism is badly tarnished.

But the debate over who gained or lost from that summit conference still goes on.

Some argue it was a major setback for the West—that the Bolsheviks accomplished a major objective by encouraging the Western World to relax—which it has—and thus become easier prey.

Others argue that the Geneva meeting was a major gain for the West—that it relaxed internal tensions and diminished the danger of war.

The record supports the claim that the Geneva Conference was a plus for the Soviets and a minus for the West:

The Reds have made alarming headway with expanded influence in south Asia and the Middle East, and have increased the danger of an Arab-Israeli war.

Western alliances have been creaking and the West in general, basking in the afterglow of the phony Geneva spirit, is letting down its guard and indulging in the luxury of intra-family squabbles.

The new Soviet leaders have managed—by changing only their manners—to mislead many people into believing that the Kremlin is sanctioning fundamental changes though the Soviet leaders themselves have stated that their fundamentals will not change.

On specific subjects discussed at Geneva, the conference and all subsequent negotiations have proved complete flops. The East and West are just as divided as they were at Geneva.

The Foreign Ministers' Conference which followed the summit meeting was, according to the President, to be the "acid test" of Soviet intentions. It was a greater flop.

Mr. Eisenhower suggested that the test of Soviet cooperation pledges to him at Geneva would come "in the language and terminology in which we will find speeches and diplomatic exchanges couched."

Last week Soviet delegate Andrei Gromyko bitterly denounced the United States

before the United Nations, provoking the American delegate to describe the speech as "in the worst traditions of Stalinism."

A few days earlier a Soviet note absurdly accused the United States Air Force of espionage in flights over Soviet cities.

Pravda's "new spirit of conciliation and cooperation" is displayed by blaming Secretary of State John Foster Dulles wholly for Poland's bread riots.

The easy answer is the one used by President Eisenhower in his recent letter to Chiang Kai-shek:

"International communism alters its tactics from time to time but we have as yet no evidence of any change in its objectives."

Nevertheless, it has been the change in Soviet tactics—looked at uncritically by much of the world—which has given the Soviet Union the advantages it has reaped in the past year by merely playing on world gullibility.

How superficial those changes are is evident in a summary of the year's highlights:

The Soviets keep at high tempo their pious professions of peace, but they leapfrogged into the Middle East with a Czech-Egyptian arms deal, provoking an arms race which could lead to war.

West Germany established diplomatic relations with Russia after a Soviet promise to return prisoners of war held more than 10 years. All the POW's were not returned and now the Soviet leaders have recalled their ambassador in Bonn.

Khrushchev and Bulganin toured India, Burma, Afghanistan, and Pakistan, indulging in international demogoguery on a grand scale and promising the moon to all who would believe them.

Russia vetoed Japan's admission to the United Nations.

The East German army formally was incorporated in the Soviet-Warsaw Pact, but the Kremlin still demands dissolution of all Western military alliances.

The Soviet leaders painted Stalin as a maniacal despot so far as most of internal evils are concerned, but haven't mentioned any of his international crimes except his blunder with Tito.

There is much talk about a better deal for the Soviet people, but the new 5-year plan is just Stalin's old forced industrialization policy. Emphasis is overwhelmingly on heavy and military industry—only crumbs for the consumer.

The Kremlin's anti-Stalin and kiss-and-make-up-with-Tito campaigns seemed to encourage the satellites to be more independent. But when Polish workers demanded more bread and freedom they were shot down by the army.

The Cominform was "dissolved" and foreign Communist parties enjoyed a couple of weeks of criticizing the Kremlin's handling of the anti-Stalin campaign. But the foreign Reds have now all swung into line—and are no longer asking Khrushchev what he was doing when Stalin was rampaging.

The U. S. S. R. claims it cut its armed formes by 640,000 men last year and will make another reduction of 1.2 million this year—and demands the West do the same. But it steadfastly refuses to accept any arms-reduction plan which would provide inspection. The same is true of Soviet atomic armaments proposals.

The unhappy facts are that on the really important issues—Germany, the satellites, disarmament, the Far East, etc.—the new Soviet regime's policy has hardened.

Changes may be occurring inside the Soviet empire. It is probably true that the Soviet leaders would like to avoid a major war—as did Stalin—if objectives can be attained by other means.

But nothing has happened since the Geneva Conference to encourage hope for even a change of tactics—except for the worse—on the issues that could spell the difference between war and peace.

Commonwealth Club of California Vote on U. N. Membership

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks I include the results of the vote taken on July 16, 1956, by the Commonwealth which is the official publication of Commonwealth Club of California.

This vote concerns the advantages and disadvantages of the United Nations which it is believed by the members are useful or nonuseful to our own national policies, to our independence of action and to our constitutional rights.

I am certain that the Members would be interested in reading the results of the vote of the Commonwealth Club members. The Commonwealth Club has been studying public problems, both local, State and national, as well as international problems that affect us, for half a century. Consequently their backlog of experience in handling public problems is listened to with great respect. I believe that the Members of the House will be interested in looking at the results of this poll or vote taken by the Commonwealth Club.

The results of the vote follow:

COMMONWEALTH CLUB OF CALIFORNIA VOTE ON UNITED NATIONS MEMBERSHIP—BALLOT OF ENTIRE CLUB FOLLOWING STUDY BY INTERNATIONAL RELATIONS SECTION

I. Do the advantages of United States membership in the U. N. outweigh the disadvantages? Yes, 1,574.

Do the disadvantages of United States membership in the U. N. outweight the advantages? Yes, 324.

II. (A) Does our membership in the U. N. endanger our national sovereignty? Yes, 564; no, 1,308.

(B) Because of our membership in the U. N. does our Constitution need to be amended to give greater assurance that the American people, through constitutional processes, retain national sovereignty? Yes, 664; no, 1,054.

III. Should the U. N. have any control over:

(a) Our constitutional rights and traditional safeguards? Yes, 56; no, 1,847.

(b) Our immigration laws? Yes, 114, no, 1,780.

(c) Our tariff laws? Yes, 185; no, 1,699.

IV. Should the supreme law of the United States be:

(a) The U. N. Charter Yes, 79.

(b) United States Federal Constitution? Yes, 1,805.

V. (A) Should the United States continue its membership in the U. N. as now organized and functioning? Yes, 1,584; no, 304.

(B) Should the U. N. be asked to remove its headquarters from the United States? Yes, 255, no, 1,585.

VI. Should the United States Government support a pro-U. N. publicity campaign in the United States? Yes, 913; no, 906.

VII. (a) Can the U. N. prevent war? Yes, 686; no, 1,086.

(B) Is the U. N. useful to the United States in our policy of helping to prevent war? Yes, 1,614; no, 268.

VIII. Regardless of our membership in the U. N., must we rely for our security principally on our own strength and our defensive alliances? Yes, 1,803; no, 100.

IX. Was U. N. participation in connection with the Korean war:

(a) An advantage to the United States? Yes, 1156.

(b) A disadvantage to the United States? Yes, 586.

X. (A) Should United States foreign aid:

(a) Be channeled only through the U. N.? Yes, 89.

(b) Be handled only directly with individual nations? Yes, 757.

(c) Be handled by both methods? Yes, 934.

(B) Should United States foreign aid be limited to nations which cooperate with policies supported by the United States? Yes, 1,200; no, 535.

XI. Has the activity of the United Nations:

(a) Encouraged upheavals in the colonial areas? Yes, 527.

(b) Discouraged upheavals in the colonial areas? Yes, 185.

(c) Had little effect either way? Yes, 986.

XII. Should we withdraw our support from:

(a) UNESCO (United Nations Scientific and Cultural Organization)? Yes, 491; no, 1,219.

(b) ILO (International Labor Organization)? Yes, 692; no, 960.

XIII. Have American Communists employed by the U. N. given help to the U. S. S. R. in the cold war? Yes, 1,198; no, 242.

XIV. Does the United States need to strengthen and perfect its defense against subversion by Communists operating in the U. N.? Yes, 1,361; no, 263.

XV. Has the U. N. helped Communist expansion throughout the world in the past 10 years? Yes, 536; no, 1,039.

XVI. Should the United States continue to pay the proportion of the costs of the U. N. heretofore allocated to it in the form of:

(a) Cash? Yes, 1,065; no, 444.

(b) Technical assistance? Yes, 1,248; no, 249.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Not the South's Fight Alone

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 13, 1956

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the RECORD, I enclose an editorial from the Richmond News Leader of Richmond, Va., of Monday, July 16, 1956. Mr. James Jackson Kilpatrick, the able exponent of the Doctrine of Interposition, is the editor of the Richmond News Leader.

This editorial points out very forcefully, as I undertook to do yesterday in my speech in opposition to the so-called civil rights bill, H. R. 627, that the bill may prove—and most likely will—as dangerous to the Northern and Western States as to the Southern States.

The editorial is as follows:

NOT THE SOUTH'S FIGHT ALONE

If there is anything good to be said of the "civil rights" bill now before the House of Representatives, a close reading of the proponents' statements fails to disclose it. The bill seeks to cure certain evils which already are susceptible to remedy by existing law; but in order to attack these evils, the bill creates far greater ones. If the measure drew its greatest support from people who are sincere, if misguided, at least their good intentions would merit some respect; but this bill draws its chief support from a band of shamelessly cynical politicians bidding for the Negro vote. They know the bill will be killed in the Senate; their irresponsible aim is solely to create a voting record in the House.

Yet the most regrettable aspect of this whole affair is the apparent inability of the press and the public outside the South to comprehend the invitation to bureaucratic tyranny concealed in the scheme. The bill is understood as another conflict between North and South, between white man and black man; it drives the wedge of sectional misunderstanding still deeper.

Should these vindictive proposals ever become law, a terrible weapon of vengeance and harassment will have been placed in Federal hands, to be levied against public officials and private individuals throughout the country. The sweeping powers of summons and subpena provided in this bill, and the wholly unwarranted powers relating to civil suits in Federal courts, would serve utterly to degrade State judicial authority.

Back in March of 1833, if we may recall a little recent history, the Congress vengefully adopted a force bill aimed at South Carolina. But the bill never was used against South Carolina. To the intense chagrin of the northern interests that had compelled its adoption, the bill first was employed against the sovereign State of Ohio some 10 or 15 years later. What had seemed a desirable weapon against the rebellious Carolinians then was seen clearly as a detestable instrument of Federal power against all States.

The current civil rights bill, we are reliably advised, will die in the Senate Judiciary Committee, but the Federalist spirit behind it will survive. And so long as the apostles of tyranny can cloak their intentions in a spurious, eye-rolling effort to protect the Negro, it will prove difficult indeed to convince our northern brothers that it is not the Negro's liberties that are endangered: It is their own.

Mr. Senator, Mr. Congressman, Before You Go Home You Have Unfinished Business

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a splendid statement that appeared today in the Washington Post and Times Herald regarding the present desperate plight of the textile industry. It contains much of the basic data, which I have included from time to time in my various speeches and statements in the House about this subject.

How anyone can read it without being deeply impressed concerning the dangers would seem incomprehensible to me and surely one would not have to possess great foresight in order to realize that the same unfair competitive conditions now so seriously undermining the textile industry are developing with respect to other American industries, and that the time will come in the not too distant future when the whole economy is bound to be threatened by a deluge of cheap foreign imports that will shatter our present high living standards, wages and full employment, and general prosperity.

I again urge the indulgence and consideration of my colleagues respecting the very serious problems presented to this country by these substandard competitive imports:

MR. SENATOR, MR. CONGRESSMAN, BEFORE YOU GO HOME, YOU HAVE UNFINISHED BUSINESS

You are leaving one of the most vital segments of the American economy in a position of danger.

You are exposing the second greatest industry in the United States to the imminent risk of serious and permanent impairment.

And this is an industry essential to our national defense.

The jobs and livelihood of a large percentage of the more than a million workers directly employed in this industry, and their families; of hundreds of thousands of others in allied and related industries; and of countless more tradesmen and merchants who serve them and whose businesses are dependent upon them, are at stake.

This is the textile industry which makes the fabric for the clothing that you and your own families and friends as well as some 167 million other American men, women, children and infants must wear—the sheets and pillowcases on which we all sleep—the towels and washcloths to keep us clean—the household and automobile upholstery upon which we sit—the carpets, curtains and draperies that make our homes attractive and liveable—the industrial fabrics without which almost no other American products could be produced—the uniforms that clothe and protect our Armed Forces, and fabrics that are indispensable to the construction and performance of our planes, ships, tanks and other military requirements.

It is an industry threatened today by a mounting invasion of cheap fabrics and garments from Japan, Italy, France, and England produced by low wage-earners with which many American mills are unable to cope without adequate Government protection.

Forty-four of you who are members of the United States Senate seemed to realize on the afternoon of June 28 the importance to our economy of America's textile industry, but by that same evening one of you changed your mind. It is not for me to question why. It is enough to note that, as a result, the imposition of mandatory quotas on the importation of cotton fabrics and apparel was finally defeated by the close vote of 45 to 43.

Do you Senators who opposed import quotas—and you Representatives of the people in the House—fully appreciate how serious the situation really is?

Here are some facts that are on the public records: American raw cotton is being sold to Japanese textile mills at prices more than 20 percent lower than our own mills must pay for it. Japanese mills pay their workers one-tenth as much as the wages earned by American textile employees. So even after the payment of custom duties, Japanese goods are being sold in this country well below what it costs American mills to make the same goods.

In the first 4 months of 1955, less than 21 million square yards of Japanese cotton cloths came into the United States. In the same 4 months this year over 64 million yards were shipped here. In the whole year of 1955 the Japanese shipped about 33 million yards of ginghams to this country. In just 4 months this year, they sold us almost 54 million yards of ginghams. Less than 200,000 yards of Japanese velveteens were imported in the first 4 months of last year, more than a million and a half yards came in from January through April this year. In the same 4 months, close to 375,000 dozen Japanese shirts were imported this year, compared with less than 63,000 dozen in 1955.

What have been the consequences?

Our cotton mills have been obliged to curtail production and cut down on hours of employment. Some gingham and velveteen mills in particular have closed down or continue operating only at a loss in the hope that the Government may finally provide some relief.

The head of one of the Nation's greatest cotton mills was recently quoted as saying, "I must retrench. I must go on a 5-day

week. I must give up any plans for expansion. I can't compete with Japanese imports when the Japanese buy cotton for 10 cents a pound less than I am forced to pay for it."

Other mills, with smaller resources than this one, have had to cut down to 4- and 3-day work weeks, or cease operations altogether.

And cotton is not alone in feeling the squeeze. The woolen and worsted industry, which was already staggering because of domestic conditions, is facing the possibility of almost fatal blows from imports.

British woolen imports the first 5 months of this year were over 6 million yards compared with slightly more than 4½ million yards in 1955. Japanese woolen imports in the first quarter of this year were 3 times as great as last year. Italian and French woolen imports also are rising.

These foreign woolen goods, like cotton, are selling in our own American market, duty-paid, for less than the cost of manufacturing them in the United States, and 20 percent under what American mills would have to charge for the same goods just to break even. They have completely taken over the American domestic worsted market in critical price categories and leaders in the industry agree that unless woolens are granted higher tariff protection the few worsted mills remaining in this country may soon have to go out of business.

Let's grant the Japanese have voluntarily imposed some quotas on their own textile exports to the United States. The fact is those quotas are only on some classes of goods, some of them permit as much or larger quantities than are coming in already, and they can be terminated or abandoned any time the Japanese see fit. Only mandatory quotas and higher duties imposed by our own Government can protect our own textile and apparel industries.

The textile industry has been in a prolonged slump while the rest of the Nation's economy has been prospering since the end of World War II. And the figures issued by the Federal Trade and Securities and Exchange Commissions just this 10th of July ought to be positive proof of the unhealthy condition of the textile industry today.

Those figures show that textile profits are 40 percent below the average in all industries; textile earnings on sales after taxes are little over 3 cents per dollar compared with about 5½ for all manufacturing corporations; and profits after taxes are some 7 percent against over 12 percent for all manufactures.

Is this an industry that should be left to the mercy of impossible-to-meet salary competition from foreign imports? Do you Senators and Congressmen realize that your vote of June 28 was tantamount to telling the American people that our textile industry is expendable? Do you think America can get along with this industry crippled and impotent?

There is still time before Congress adjourns, for you to reverse the action of the Senate on June 28th and provide not only the textile industry but the whole American economy the protection it rightfully must have.

I appeal to you Senators and Congressmen to give some relief to the American textile community of manufacturers. This basic industry must be preserved if it is to continue to serve the best interest of the American people.

RELIABLE SAMPLE CARD CO.
IRVING WARSOFF.

NEW YORK CITY, *July 16, 1956.*

(Published in the interest of the American Textile Industry)

Congressman Dawson Reports

EXTENSION OF REMARKS
OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. DAWSON of Utah. Mr. Speaker, I have had many, many requests for information concerning the Central Utah project, one of the major participating projects of the upper Colorado River storage program, which was approved by this session of Congress. For that reason I am inserting in the RECORD a series of weekly newsletter outlining the details of this tremendous undertaking.

CONGRESSMAN DAWSON REPORTS

(By Representative WILLIAM A. DAWSON)

CENTRAL UTAH

Now that the fight for the upper Colorado River project is over—and won—it is possible for me to examine some of the details of the project, rather than viewing it as a whole. Most of the attention and publicity has centered around the large storage dams—Glen Canyon and Flaming Gorge. Publicity on these dams, and Echo Park, has focused attention away from some of the other important structures authorized by the legislation, including the vitally important central Utah project.

Details impress

Even the central Utah project is so complex that it is hard to comprehend its vastness without a more detailed examination. After examining these details, one begins to realize how the construction of central Utah is going to affect the State not only economically, industrially, and agriculturally, but in recreational resources as well. The addition that Glen Canyon—with its 181-mile long reservoir—will make to Utah's recreational resources is generally well-known. But we should not overlook the impact of some of the smaller structures.

Small reservoirs

Thirteen new reservoirs will be built as part of the central Utah project. All of them will be in Utah and several of them will be of a size to add greatly to the State's swimming, boating, and fishing pleasures. In addition, Strawberry Reservoir's present 283,000 acre-feet capacity will be increased 5 times by the construction of the 268-foot high, quarter-mile-long Soldier Creek Dam.

One example

Let us examine in detail one of the small reservoirs in its relationship to recreation. Starvation Reservoir will be created by a 160-foot high, one-third mile long earth filled dam 4 miles northwest of Duchesne. The reservoir will cover the present U. S. 40 highway and be slightly larger than Deer Creek. The reservoir will be about 3 miles long and a little over a mile wide. It will cover what is at present a sage and juniper bush flat.

Things to come

The construction of this minor unit of the overall project will cost $18.7 million. This expenditure, of course, is to store water for domestic, industrial and agricultural users who will pay for the cost of the project. But boating, swimming, and fishing will be additional assets readily available to the residents of all Utah. With the construction of boat docks, picnic areas, and camping facilities, Starvation Reservoir should become as popular a play area as Deer Creek is now.

Lots more

The story of Starvation Reservoir will be repeated many times as the other reservoirs in the central Utah project are constructed. There will be a new lake at Round Knoll near Wallsburg in Wasatch County. Situated in an attractive upland valley, the lake will be a haven for fishermen, boatmen, and swimmers. Each new reservoir will create another delightful place for Utahans to spend an afternoon, a weekend, or an entire vacation. These benefits are incidental to the overall purpose of the project—water for Utah's future.

CONGRESSMAN DAWSON REPORTS

(By Representative WILLIAM A. DAWSON)

BIG BORE

The attention that has been focused on the two large storage dams of the upper Colorado River project—Flaming Gorge and Glen Canyon—has somewhat obscured the fact that the central Utah project is the project that will make the changes in Utah's water picture. For it is central Utah that will bring the water over the Wasatch Mountains to thirsty farmlands and household water taps in the Bonneville Basin. One of the major features of the central Utah will be Utah's biggest bore—a 28.3 mile tunnel through the top of the Wasatch Range.

Collection system

This tunnel—plus 7.5 miles of pipe and 1 mile of siphon—will collect water high in the Uintah Mountains. This water makes up 80 percent of the present flow of Rock Creek, Hades Creek, Wolf Creek, Currant Creek, and the West Fork of the Duchesne River. Instead of flowing to waste in the Green River, these waters would be transported through the mountains to the Strawberry Reservoir which will be enlarged to five times its present capacity. The Strawberry aqueduct tunnel will carry 137,600 acre-feet of water annually—four times as much as the Duchesne tunnel—now Utah's largest underground water conduit.

Engineering feat

The tunnel will be an engineering feat of the first magnitude. It will be the single, most costly feature—$33 million—of the overall $208 million price of the entire central Utah project. Of this $33 million, $29 million will be spent for actual construction, $2.7 million for engineering, and one and three-tenths million-plus dollars for temporary construction facilities. Since the aqueduct travels through national forest lands, no expenditure is necessary for acquiring rights-of-way.

Recreation use

In reviewing the construction plan of the Strawberry aqueduct, I was concerned about its possible effect on the Uintah National Forest. I need not have been. The Forest Service welcomes the construction of the tunnel. Tunnel waste will be placed where it will not be detrimental to the beauty of the area and the debris will be screened from view to the maximum extent possible.

New roads

New roads into the high forest site of the aqueduct would increase access to this primitive area for the average visitor. Construction-camp facilities could be used by tourists and after the construction period is over they could be taken and administered by the Forest Service as campsites.

New fishing

Thus, the tunnel which gathers the water for Utah's future will, as an incidental benefit, open new areas for our citizens who want to enjoy Utah's primitive areas. Next week I will describe how other individual features

of the central Utah project will add to the wealth of Utah's recreational resources.

CONGRESSMAN DAWSON REPORTS

(By Representative WILLIAM A. DAWSON)

STRAWBERRY RESERVOIR

One of the major features of the central Utah project—the project that will furnish water for Utah's future—will be the enlargement of Strawberry Reservoir. The enlarged reservoir will store water gathered high in the Uintah Mountains for later use in the water-thirsty areas in Utah and Salt Lake valleys. The water—137,600 acre-feet per year—now runs to waste in the Pacific Ocean.

Major undertaking

The present capacity of the Strawberry is 283,000 acre-feet. This will be increased to 1,370,000 acre-feet under the central Utah project, making the Strawberry Utah's largest artificial lake. Major construction at Strawberry will be the building of Soldier Creek dam—a 268-foot high, 1,370-foot long, earth-filled dam 9 miles downstream from the present Strawberry Dam. Overall cost of the unit will be $12,620,000 of which $500,000 would be spent for temporary construction headquarters.

Face changing

The proposed enlargement of Strawberry to five times its present size will make major changes in the use and appearance of the area. The new reservoir will be 7 to 8 miles wide and 8 to 9 miles long in addition to a 4-mile arm behind Soldier Spring at the new damsite. The new reservoir will inundate several miles of United States Highway 40 which now skirts the north margin of the present reservoir area.

Recreation use

Being only 70 miles from Salt Lake City, Strawberry now is a major fishing and recreation area. The proposed enlargement will only increase this incidental benefit to the State. Present fishing villages will be flooded out, but new ones will spring into being along the shores of the enlarged reservoir. In addition construction camps will be available for recreation use after the project is completed.

Park plan

The National Park Service, at the request of the Bureau of Reclamation, has already made preliminary recommendations concerning development of recreation facilities around the new reservoir. They include the development of a major tourist cabin area on Windy Ridge just west of Soldier Creek. The Park Service also points out that the reservoir will make several cabin sites available for development for summer homes. It is recommended that $275,000 be spent developing boating and fishing facilities.

Isaak Walton

Isaak Walton once said: "God doubtless could have made a better berry than the strawberry. But, doubtless, He never did." I think the time-honored spokesman for the angler would be pleased with the fishing prospects of the reservoir coincidently named after his favorite fruit. Next week I will discuss other details of the vital central Utah project authorized as a part of the upper Colorado storage project approved this session of Congress.

CONGRESSMAN DAWSON REPORTS

(By Representative WILLIAM A. DAWSON)

NEW TUNNEL

The $208 million Central Utah project—a unit of the Upper Colorado River project—will make many changes in the face of Utah as it transports and stores 137,600 acre-feet of water now going to waste in the Pacific Ocean. Many new reservoirs and other structures will come into being as the project gathers water in the high Uintahs, transports it over, around, and through the mountains to an enlarged Strawberry Reservoir where it will be stored for later use by farms, cities, and industries along the west side of the Wasatch Mountains.

New tunnel

In order to transport this new water through the Wasatch Divide and into the valleys below, the present 8.6-foot, horseshoe Strawberry Tunnel will be enlarged to a 9.6-foot circular structure at a cost of more than $5 million. From there, the water will pass down Diamond Fork and Spanish Fork Canyons, passing through 4 powerplants with a combined capacity of 61,000 kilowatts on the way. Money from the sale of this power—estimated at nearly $2 million per year—will help repay the cost of the project.

New aqueduct

In its journey through the powerplants and out over the benchlands south of Spanish Fork and Payson, the water will be transported through the Wasatch Aqueduct—a 20 mile stretch of canal, pipe and siphon. Two smaller storage reservoirs will be built to regulate the flow—a $4.1 million structure at Monk's Hollow, 14 miles up Spanish Fork Canyon, and a $360,000 reservoir at Goosenest, 3 miles south of Payson. From the aqueduct, the water would empty into the 17-mile long Mona-Nephi Canal and be used on lands between Santaquin and Nephi and as far west as Elberta in Utah County.

New lakeshore

Another major feature of the Central Utah project will make a notable change in the outline of Utah Lake. Construction of the $1 million Provo Bay Dike, 6.7 miles long and 20 feet high, will cut off the eastern arm of the lake making 9,340 acres of rich bottom land available for farming. In addition to conserving water, the new dike would make an excellent route for a new highway and its use as such might save a good deal of money.

Jordan River

The project includes improving the channel and increasing the capacity of the Jordan River from Utah Lake through the Jordan narrows. Additional water made available would go into the new West Valley Canal, which would run from the Utah-Salt Lake County line along the west side of the Jordan River to Magna-Garfield, a distance of 18 miles.

City water

The water supply for Salt Lake City would be increased by construction of Bates Reservoir on the Provo River above Deer Creek. This additional storage, plus water now being used in South Utah County, should be sufficient to meet all anticipated needs of Salt Lake Valley until the year 2000 according to experts. Next week, I will discuss how the Central Utah project benefits the Uinta Basin area.

CONGRESSMAN DAWSON REPORTS

(By Representative WILLIAM A. DAWSON)

UINTA BASIN

The central Utah project, which will furnish the water for Utah's future, has two major units—Bonneville Basin and Uinta Basin. The Bonneville Basin unit is a series of reservoirs, aqueducts, tunnels, and canals that will bring 137,600 acre-feet of water annually through the mountains to the communities and farms along the west slope of the Wasatch Mountains. This water currently is running to waste in the Pacific Ocean. The central Utah project also provides new storage reservoirs to expand irrigation, industrial, and domestic water supplies for cities and towns in the Uinta Basin.

New reservoirs

This week I would like to discuss the Uinta Basin phase of the central Utah. The Uinta Basin currently has a surplus of water. But due to lack of storage, most of this surplus runs to waste down the Colorado River system during the spring runoff. To store this water for later use, the central Utah project includes the construction of five new reservoirs to serve the Uinta Basin area.

Most costly

By far the largest and most costly reservoir serving the Uinta Basin will be the Starvation. Slightly larger than Deer Creek, this reservoir and dam will be located about 4 miles northwest of Duchesne, right across the present route of U. S. Highway 40. The dam will be 160 feet high and the overall cost will be $18.6 million. The reservoir will impound water in the Strawberry River and be fed additional water through a 7-mile feeder canal from the Duchesne River.

Other structures

The four other reservoirs in the Uinta Basin area are: Tyzack, on Brush Creek, 10 miles northeast of Vernal; Hanna, on Duchesne River, 29 miles northwest of Duchesne; Upalco, on Big Sand Wash, about 1 mile northwest of Upalco, Utah; and Stanaker, an offstream reservoir 3.5 miles north of Vernal, which will store water from Ashley Creek. The total cost of these four reservoirs and canals and laterals serving them will be about $22 million.

More water

The Uinta Basin portion of the central Utah project will furnish water for an additional 6,890 acres of new land and supplemental water for 34,490 acres already under irrigation. It is estimated that it will satisfy the municipal and industrial growth demands of the basin until at least the year 2000.

Recreation features

According to the National Park Service, Tyzack and Stanaker Reservoirs will be fine for swimming and boating and the Service recommends expenditure of $100,000 for development of recreation facilities. Hanna Reservoir, high in the Uintas, should be good for camping and fishing. Next week I will discuss the Emery County project, which, like the central Utah project, has been authorized by Congress as a part of the upper Colorado River storage project.

CONGRESSMAN DAWSON REPORTS

(By Representative WILLIAM A. DAWSON)

EMERY PROJECT

In addition to Flaming Gorge and Glen Canyon dams and reservoirs, and the Central Utah project, the upper Colorado River legislation also provides for the construction of another project important to Utah's economy and growth. This is the $9.8 million Emery County project which will bring additional water to farms in the vicinity of Orangeville, Castledale, Huntington, and Cleveland, Emery County.

Benefits told

The project will capture and put to use 32,400 acre-feet of water now running to waste in the Colorado River system. This water will irrigate 3,630 new acres of land and benefit an additional 20,450 acres of farmland now having inadequate water supplies. Of the total cost of the project, all but $229,000 will be repaired by water and power users.

New reservoir

Major unit of the project will be a dam and reservoir on Cottonwood Creek about 12 miles northwest of Orangeville in Joes Valley. The dam will be 185 feet high and will create a reservoir about the size of Fish Lake. Cost of the dam is estimated at $5.5 million. The project also contemplates construction of a $120,000 diversion dam 8 miles downstream from Joes Valley.

Long canal

From the diversion dam at Swasey, water would be transported 17 miles through the Cottonwood-Huntington Canal which will be built at a cost of nearly $4 million. Laterals

from the terminal point near Huntington would carry the new water supply to thirsty farms in the area. The project will require the relocation of Utah Highway 10, part of which will be flooded out by Joes Valley Reservoir.

Recreation use

The National Park Service has surveyed the area and reports that the project will greatly increase its recreational value. Noting that Utahans drive many miles to fish at Fish Lake and Scofield Reservoir, the Service remarks that Joes Valley Reservoir will be similar in size and setting. The Service predicts that the area will become popular for summer homes and high altitude summer vacations.

Vast benefits

During the past few weeks, I have tried to give you some of the details of the overall $1 billion Upper Colorado River project as they affect Utah. Certainly construction of this vast project—the largest single reclamation project ever approved by Congress—is going to make great changes, not only in the prospects for the future of the State and its citizens, but in the appearance of many of our recreation areas.

Allwood Kids Can't Resist Postman's Smiles—and Gum

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. CANFIELD. Mr. Speaker, Uncle Sam's homefront ambassadors are the postmen, and most of them perform a valuable public relations job as they make their daily appointed rounds.

Such an ambassador of good will is Charles Conte, mail carrier, whose story is told in the following article by Marie Hugo, staff correspondent for the Passaic, N. J., Herald-News:

ALLWOOD KIDS CAN'T RESIST POSTMAN'S SMILES—AND GUM

(By Marie Hugo)

Like the legendary Pied Piper of Hamelin, Charles Conte, Allwood's oldest mailman in years of service, attracts small children who follow him on his daily route.

However, they follow Conte for a different reason. Charlie not only has a winning personality but also has supplied the kiddies with chewing gum for 32 years. Some of the youngsters who tag along with him are the offspring of other Allwood children—to whom Conte was like an idol, a generation ago.

When Charlie first delivered mail in Allwood 32 years ago, he had only 5 or 6 streets to cover. They were Chelsea, Lyall, Peru, Morris, and Brighton Roads. That's all the streets there then and Charlie was the only mailman in the section. At present, nine carriers serve Allwood daily.

During World War II and the Korean conflict, Charlie was a harbinger of the boys all across the world. He laughed and cried with the mothers of all the boys and listened to the glad tidings of promotions or any sad news. Some of the boys to whom he had given gum did not come back. Charlie always had a special sound to his whistle when he carried a serviceman's letter to some Allwood family.

Charlie starts out with full packs of gum, but every once in a while, he is compelled to break each piece in half so his supply would last the length of his route. Over the years, Charlie estimates he has spent a considerable sum of money for the children.

He and Mrs. Conte, who live at 47 Morris Road, have three children, Mrs. Arthur Di Salvo, of Paterson; Charles, Jr., and George. Both sons have seen service—as their father did in World War I.

When Charlie retires from the postal service, the new mailman will wonder why little children follow him asking for a piece of gum. For some of the youngsters, it was almost their first word.

A Record Campaign

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. ASPINALL. Mr. Speaker, we often find ourselves in the situation of being too close to events to give them proper evaluation. We all long, on occasion, to take a bit of time and stand back for a moment and sort out the events that pass each day, assigning to each its place of real importance. In that we seldom find this time, it is rewarding to find an example of this type of reflection. Just such an example recently came to my attention and I wish to call it to the attention of the Members.

It is an article from the Roundup section of the Denver Post for July 8 of this year on the campaign of Adlai Stevenson. Most of us have some opinion of Governor Stevenson, but it is my thought that this article by Lawrence Martin, an associate editor of the Denver Post, is important not because it is about Governor Stevenson but rather because it covers an important part of the political history of the present, and covers it more in the tenor of the long run than of the harried present. I recommend this article as an important bit of what will one day be history, but written for the present.

The article follows:

A RECORD CAMPAIGN

(By Lawrence Martin)

No man in American political history—not even William Jennings Bryan—has ever conducted so long a full-speed campaign for the Presidency as Adlai Stevenson. For, after a brief interlude to let the bruises heal, he began his second run only a few weeks after the first one ended in November 1952.

It has been one of the most notable performances in American politics, and in its earliest stages at least, it was keyed to obligation rather than ambition—to the proposition that no one man is indispensable to the Democrat Party's success. But inevitably the laborer felt worthy of his hire, and on that basis, if on no other, Mr. Stevenson appears at this time to have a strong claim to reimbursement by the party for his large labors through the last 3½ years.

He has repeatedly stated his reasons for bouncing back so briskly from the 1952 knockdown. Early in February 1953 he sounded this rallying call to Democrats: "While we may be a defeated party, we are not a beaten party."

That bit of semantics was small comfort, at that time, to many of his party colleagues. Their ears twitched with more interest, however, when a bit later he said that "the determining fact in my mind after the election of 1952 was that I remained—and would remain for some time—the titular head of the party." That, he added, imposed on him an obligation "to help wipe out the inevitable deficit accumulated during a losing campaign, and also to revive, reorganize, and rebuild the party."

Proving he meant it, Stevenson has ever since been working on the deficit—in money, in votes, and in party spirit. He refused to take bankruptcy in any of those categories. Putting that into baseball terms, he told a moaning friend that "one strikeout should never be an excuse for losing the whole ball game."

While his unsparing efforts have won him generous applause from his party generally, some Democrats are still unconvinced he has thereby earned another presidential nomination. They advance various reasons. Stevenson took note of one such criticism in a speech before a Democratic organization, when he said: "Perhaps you will say that I am making not a Democratic but a Republican speech; that I am counseling unity and courage in the Republican Party and administration. You bet I am. For as Democrats, we don't believe in political extermination of Republicans, nor do we believe in political fratricide, in the extermination of one another."

That sort of talk is considerably above the usual partisan level, and especially when appraised outside of context, is disquieting to party stalwarts, to whom every Republican vote is painful.

At any rate, as the climax of his long campaign approaches, Stevenson has fully asserted his leadership, his spokesmanship and his devotion, and has set down, in terms both broad and explicit, the kind of Democrat platform with which he believes his party can win, and on which he can be elected. He has done this in more than 100 speeches—over and above those made during his recent presidential primary tours—in dozens of articles, and in many conferences with Democrat groups.

A perusal of those speeches and writings does disclose many similarities, in words, at least, with Republican Party philosophy. But when Stevenson used the familiar Eisenhower word "partnership" to describe the ideal relation between government and people, he always drew a sharp distinction between the word and its application. "It is not only what we do, but how we do it," he has said many times.

The evolution of the 1956 Stevenson platform can best be sketched in his own words, from his speeches and writings, in the examples that follow.

Talking on the subject, "Giving the Government Back to the People," before the Democrat national committee in Chicago last November, he said: "We propose not to make issues where there are none, nor to be critical without being constructive. Our disagreement with the central principles of Republican policy runs deep, but it does not diminish our respect for those who sincerely hold that political faith. Let us be very clear that Republicans want a safe and sane world every bit as much as Democrats."

That does not change the facts, however, he went on, "that the cold war is still in the deep freeze, that our security system is deteriorating, and that a safe and orderly world is still a distant goal. Certainly we must have learned by now that peace and security cannot be had for the asking, or by slogans and tough talk, or by blowing alternately hot and cold, rash and prudent. * * * We must have learned that sound foreign policies cannot be devised with one eye fixed only on the budget, and the other on divisions in the Republican Party. We must have learned that in the fluctuating market of world affairs there is no bargain basement where peace is for sale cheap."

Stevenson has throughout been earnest in counseling his party against the temptation to say, "Elect the Democracts and the farm problem will be solved overnight," or to promise instant magic on any other issue. "Let us leave that sort of talk to Republicans," he has said.

Further delineating his views on platform issues, Stevenson said: "I agree that this is a time for catching our breath; I agree that moderation is the spirit of the times. But we best take care lest we confuse moderation with mediocrity, or settle for half answers to hard problems. Moderation, yes; stagnation, no."

In his oft repeated treatment of specific problems and issues, Stevenson has covered a wide range. Here are examples:

Agriculture: "We are committed to restoring farm income to fair levels by a many-pronged attack. Democrats do not contend that price supports are the whole answer. * * * Price supports must be employed in conjunction with a whole series of both supplementary and complementary measures. * * * The real key to the farmer's welfare is an intelligent, sensitive, and responsive administration on a day-to-day basis."

Foreign policy: "In these last 3 years, the United States has come dangerously close to losing its leadership in the world—economically, militarily, and worst of all, morally. At a time when the new leadership in Russia has been successfully playing on the universal desire of people elsewhere for an end of cold-war tensions, the (Eisenhower) administration has clung stubbornly to its military emphasis in pacts, foreign aid, trade and international exchanges of all kinds. * * * While the Soviet policy has become more flexible, we have become more rigid."

Asia: "The fall of China, the war in Korea, the disaster in Indochina all have been accompanied by discord and disunity and by some of the worst demagoguery in the history of the Republic. The first step in the development of a sensible Asian policy is to take Asia out of American politics."

Middle East: "Steps should be taken to make it unequivocally clear that Israel is here to stay; that we will not tolerate armed aggression by either side; that an equitable balance of armed strength should be preserved between Israel and her neighbors."

Foreign aid: "If we propose to make economic aid most effective, we will have to stop demanding that recipient nations pass loyalty tests, and stop using our money to bribe feeble governments and set up rubber check military pacts which will bounce as soon as we try to cash them."

Segregation: "As President, I would work ceaselessly and with a sense of crucial urgency, with public officials, private groups and educators, to meet this challenge in our life as a nation, and this threat to our national reputation."

Public power against private power: "One of the first things I propose to do is to stop the Republican giveaway of our great power resources, and to begin again the big and vital job of development that was symbolized under Democratic administrations by the TVA, Bonneville Power Administration and the rural electrification program."

Labor and business: "The Eisenhower administration has completely denied the essential role played in this society and Government by free labor unions and free collective bargaining. * * * Let us be quite clear about this; there is no conflict between the Democratic Party and business. What we criticize is not business, but the virtual exclusion of everybody else. Eight of the ten members of the Cabinet, and almost three-quarters of the men appointed to high executive office come from big business. * * * We will seek to protect the place of small business. At the rate smaller businesses are going bankrupt or being swallowed up by bigger businesses, you can't help but be anxious about the future of enterprise."

Education: "We Democrats are for a country in which the schools are worthy of the children, and adequately staffed by teachers supported as their honored profession merits."

Housing: "We are for a country where no man's home is blighted by smoke, dirt, and noise, and cut off from sunlight, trees, and air. * * * I am convinced that government and private enterprise must work closely together if we are to clear our slums and house our people."

Taxes: Stevenson has consistently favored debt reduction before tax cuts, and then tax reduction for the little fellow.

Security and civil rights: "A political party divided against itself, half McCarthy and half Eisenhower cannot produce national unity. * * * Everyone hopes the administration will find and remove all the real subversives from government. * * * But out of 2 million Federal employees, only 1 alleged active Communist has been found."

Role of the President: "The American presidency is the greatest temporal office in our planet. When the President leads, billions follow. When the President falters, the world trembles. When the President speaks, the world takes heed. When he is silent, or when he is absent, chaos threatens. We cannot do things by drift, complacency, advertising, mottoes, slogans, and fine moral sentiments."

"This is what I think," Stevenson wrote in the introduction to 1 of the 3 published volumes of his speeches. To anyone familiar with the phrasing of party platforms, much of what Stevenson thinks—and says—is couched in the language of platform planks. And that, very likely, was not accidental on the part of this man who confidently expects that his long labors, his trip around the world to study foreign affairs, and his very substantial fund raising for the party's depleted coffers will be suitably rewarded at Chicago in August.

If that is done, he will say many of the same things again during the campaign, but as a fully seasoned and probably more realistic campaigner, he is likely to be less gentle than in the past toward all Republicans, because of the hard necessity of getting votes—Democrat votes.

Katyn Massacre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Letters to the Editor column in the Washington Post and Times Herald of Monday, July 16, 1956, written by Mr. Julius Epstein, of New York City, which includes a letter that Mr. Epstein wrote to the editor of Moscow's Pravda on the subject of the Katyn Forest Massacre of 1940:

Since the Washington Post and Times Herald has always been among those American newspapers very much interested in the Katyn Massacre and its investigation through Congress, your readers might be interested in the following letter which this writer just sent to the editor of Moscow's Pravda:

"As the founder and former executive secretary of the now defunct American Committee for the Investigation of the Katyn Massacre, Inc. (chairman, Ambassador Arthus Bliss Lane) which laid the groundwork for the great American congressional investigation of the massacre of 4,243 Polish officers in the spring of 1940 at Katyn, U. S. S. R., I want to ask you why the Soviet Government and the Communist Party have not yet admitted Stalin's and Beria's guilt in this greatest military crime in history.

"The printed record of the investigation, carried out by the Select Committee To Conduct an Investigation of the Facts, Evidence, and Circumstances of the Katyn Forest Massacre (chairman, Congressman Ray J. Madden) comprises 2,437 pages, the testimony of 103 witnesses, and 229 exhibits.

"No other crime in history has ever been the object of such long and thorough parliamentary investigation as the Katyn Forest Massacre. The result of this investigation was the establishment beyond the shadow of any doubt of the fact that the Katyn massacre as well as the murder of another 11,000 Polish officers on Soviet soil was the work of the NKVD.

"You would render a great service to the cause of the truth if you would admit what the non-Soviet world has already known for a considerable time.

"Mr. Nikita S. Khrushchev has already blamed Stalin and Beria for so many crimes that the non-Soviet world cannot understand why he did not include the Katyn Forest Massacre in his list of crimes committed by Stalin and Beria.

"I trust and hope—and with me the whole non-Soviet world—that you will no longer deprive the Soviet people of the truth which can easily be found in the 7 volumes and 2 special reports, published by the American Congressional Select Committee To Investigate the Katyn Forest Massacre in 1952."

JULIUS EPSTEIN.

NEW YORK.

Should Stick to Facts

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks I include an editorial appearing in the Mount Vernon, Ohio, News entitled "Should Stick to Facts." I sincerely hope that all Members and all candidates read this editorial.

SHOULD STICK TO FACTS

Adlai Stevenson, foremost candidate for the Democratic presidential nomination, recently said in a speech that the plight of the farmers is as bad as it was during the depression.

One wonders where Stevenson got the information upon which to base such a statement.

Official statistics, based on careful study of the farm situation, certainly don't provide material for such a statement.

Take, for instance, the information contained in Business Trends, a publication issued by the research department of the Federal Reserve Bank of Cleveland, which serves the Fourth Federal Reserve District.

"Farm prices," says this publication, "in June were above year-ago levels for the first time in nearly 4 years, having climbed nearly 11 percent from the 9-year low of last Decem-

ber. During June prices received by farmers averaged 2 percent higher than a month earlier and better than 2 percent above a year ago.

"The price rise which started early this year has extended to many commodities. Prices of both crops and livestock have shown improvement since December, but the recovery has been somewhat stronger in crops than in livestock products. The all-crops index of prices received advanced nearly 16 percent from December to mid-June, to a level 8 percent above the corresponding month of last year. Meanwhile the index of prices of livestock and products rose about 6 percent, but the current level is moderately below a year earlier."

Those are facts, Mr. Stevenson, not political hooey.

Industrial Concentration Accelerated by Mergers

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a letter I received from the Textile Workers of America, dated July 11, 1956:

TEXTILE WORKERS UNION OF AMERICA,
New York, N. Y., July 11, 1956.

Hon. EMANUEL CELLER,
House Office Building,
Washington, D. C.

DEAR MR. CELLER: We have called your attention to the process of integration and mergers in the textile industry which has advanced the importance of the corporate giants in this industry. Whatever justification there may be for such consolidations in other industries and whatever benefits may have flown from such mergers in other sections of the economy, none has become evident in the textile industry. These mergers are designed to capitalize on opportunities for immediate speculative profit or to eliminate competitive forces within the industry.

Two developments observable in former years have become particularly evident in the current one. The cannibalization process has been proceeding apace. The giants have bought large corporations and then have broken them up. In previous years they closed individual properties; they have continued to do so in 1956. This year, in addition, they have broken up the mill chains which they acquired. The Amerotron Corp. sold 2 plans to Burlington Industries, Inc., and 1 plant to Deering, Milliken & Co. Burlington sold the Pacific Mills' cotton division to the M. Lowenstein Corp. Visking Corp. sold its fabric division to Johnson & Johnson. J. P. Stevens & Co., which last year bought the Cheney Bros. Co., and forthwith proceeded to close down many of its operations, has now sold the remainder to the Gerli interests, which control La France Industries .

The second development is the increasing tendency for textile mills to invest larger and larger sums in nontextile properties, thereby diverting talent, skills, and funds to nontextile industrial areas. The most glaring example is Textron, Inc., which now has about 40 nontextile properties with sales of approximately $200 million. Botany Mills, Inc., which closed its large woolen mill in Passaic, N. J., has followed suit by acquiring Rolley, Inc. (cosmetic producer) and Marksson Bros., Inc. (retail clothing chain). Chadbourn Gotham Hosiery has recently announced the proposed acquisition of Riverton Lime & Stone Co., Inc. Plymouth Cordage Co. has bought two subsidiaries from the United States Shoe Machinery Co., which manufactures shoe nails and shoe eyelets. Similar moves are being reported for other corporations in the industry.

The largest single merger during recent months has added to the Dan River Mills, already one of the largest organizations in the industry, employing more than 10,000 workers, the properties of Woodside Mills, with 7 mills in South Carolina, employing 3,000 workers; the 8 mills of the Alabama Mills, with 3,000 employees in Alabama and Georgia; and the Iselin-Jefferson Co., one of the largest selling agents and factors in the industry, together with their mill properties—besides Woodside Mills—including 2 mills with 1,400 employees. This new giant, moreover, is dominated by a group of financial interests headed by Julius Abernethy and A. Alex Shuford, which already controls 18 mills employing 3,700 workers, and has recently bought another large organization, the Fulton Bab Cotton Mills, with 4,000 employees in 8 plants, primarily located in Georgia. Several financial interests associated with the latter group are in control of other textile interests. The full result of these transactions will be to bring this group up to the first five companies within the industry. We are attaching herewith an analysis of the interrelated interests involved in these mergers.

The older industrial giants have not been idle, for they have also moved ahead in the expansion of their facilities. The Burlington Industries has acquired two blended fabric plants of the Amerotron Corp. primarily to eliminate a low-cost and low-price competitor. It has also added the Hess, Goldsmith organization, with plants in Pennsylvania and California. These 2 groups of mills have added some 3,500 new employees to the 50,000 already employed by the No. 1 giant of the textile industry.

Deering, Milliken & Co. has added a plant of the Amerotron Corp. in Maine and a worsted plant in Kinsgtree, S. C. United Merchants & Manufacturers, Inc., has added woolen interests to its other operations by acquiring the Virginia Woolen Co. Johnson & Johnson has acquired the Le Page Corp., with four plants, and the fabric division of the Visking Corp. The Kendall Co. has expanded its organizations by adding the Julia Cade Mills, of Albertville, Ala.

In 1956, our record shows, 73 textile mills employing 25,000 workers have been absorbed or are in the process of being absorbed by the giants in their process of growth through mergers. These developments warrant a thorough study and investigation.

We know that the bill before the Congress, which will require filing of notice of such mergers, will bring more of these cases to the public's attention. But that is only a first step in the development of an adequate public test of the propriety of such mergers and the growth of large corporations.

We cannot wait until these giants assume the proportions of a General Motors and then force them to spin off subsidiaries. We must proceed apace to develop criteria by which to judge whether such large corporations are in the public interest; determine what their maximum size shall be; how they shall be forced to contract; what their administrative policies shall be.

The recent General Motors hearings have focused on one phase of these problems. The Congress and the administration have to insure that these mergers are more closely examined in terms of the public interest. May we urge that steps be taken to examine closely the merger and big business problem in the light of these developments.

Very sincerely yours,

SOLOMON BARKIN.

The Demands Aren't Cricket?

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. PHILLIPS. Mr. Speaker, in view of present discussions on the subject of security regulations and the desires of those Americans who still think we ought to keep Communists out of the Government, I have asked unanimous consent to include the accompanying editorial in this extension of my remarks. It is from the Date Palm, a newspaper published in Indio, Calif., in my district. The editor is Mr. Ole J. Nordland. It is a timely editorial from the July 12 issue:

THE DEMANDS AREN'T CRICKET?

On the day after the Pearl Harbor attack, Secretary of the Treasury Morgenthau made a momentous decision.

He informed his staff that Harry Dexter White, the Treasury's Director of Monetary Research, would have the status of "Assistant Secretary of the Treasury in charge of foreign affairs."

According to new excerpts found in the voluminous Morgenthau diaries, the Secretary said:

"I want it in one brain and I want it in Harry White's brain. He will handle China."

White has since been identified as a member of a Russian spy ring. He "handled" China, sure enough—and without doubt to the complete satisfaction of the Kremlin. America's China policy eventually gave the Communists control of the world's most populous nation.

White and a number of other Government officials of that era have been identified as Soviet agents. Almost certainly there were others, in equally high places, and who may still be in a position to influence American foreign policy.

Yet there are some "liberals" who say it isn't cricket to demand that former Communists now identify their one-time associates in treason, and tell what they did in one of the blackest conspiracies in all history.

Training of Personnel for the Fishing Industry

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I received recently from Mr. G. P. Halferty, chairman of the Stream Conservation Coordinating Council, relating to a proposed training course for fishermen at the School of Fisheries of the University of Washington. The letter refers to the benefits derived some years ago from a somewhat similar training effort in connection with the halibut fishery.

The bill (S. 2379) which recently passed the Senate recognizes the continuing need for the training of personnel in the field of commercial fisheries, and is designed to provide such training. I hope that final action will be taken on the bill at this session of the Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STREAM CONSERVATION
COORDINATING COUNCIL,
DIVISION OF THE ASSOCIATION
OF PACIFIC FISHERIES,
Seattle, Wash., June 26, 1956.

Senator WARREN G. MAGNUSON,
In Care of Senate Office Building,
Washington, D. C.

DEAR SENATOR: Our attention is called to S. 2379.

For your information, the council has taken up with Dr. Van Cleve, who is in charge of the school of fisheries at the University of Washington, the matter of setting up a course for approximately 50 fishermen to be held next February or March.

When Dr. W. F. Thompson was first delegated to check the halibut fishery situation, men were sent out on the halibut boats to collect specimens, make observations, etc., and it was not long until the fishermen themselves began to realize that if the industry was to be revived so that it was profitable to them to carry on their occupations and make use of their boats and equipment, that they must understand the fundamentals that were necessary for the revival of a fishery and its preservation for the future.

This undertaking was very successful, and an industry that was on its last legs, so to speak, has been revived and, in joint management with Canada, the resource has been continued from year to year.

The thought of setting up a course at the school of fisheries is that these men would be selected by, say the Alaska Fishermen's Union and other organizations so as to get a fair representation in Oregon, Washington, and Alaska, and that these men would be taught the fundamentals necessary for the continuation of the salmon industry and that they would pass this information on to salmon fishermen that operate within their area through their unions or otherwise. This would be a worthwhile undertaking and doubtless would do much good to an industry that needs more public understanding, and this certainly includes other members of the industry who have been complacent and not vigilant in the protection of its future.

I trust this will be interesting to you, and the council would be most grateful for your cooperation.

Yours sincerely,

G. P. HALFERTY, *Chairman.*

Peaceful Coexistence for Free and Slave Worlds?

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. BEALL. Mr. President, recent actions by various Communist leaders have made quite a few persons wonder whether there can be peaceful coexistence for the free and slave worlds. A thoughtful and timely editorial on the subject was published in the July 13, 1956, edition of the Catholic Review, the the official organ of the Archdiocese of Baltimore, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DE-STALINIZING FOR RECOGNITION

The de-Stalinizing propaganda machine of world communism is having a field day with its cry of coexistence and "live and let live." So much so, that it appears quite a few responsible persons in this country are seriously considering the possibility of recognizing Red China and accepting its admission to the United Nations.

Of course, the consideration is being made mainly in the privacy of the "smoke filled rooms," which are noted hotbeds of political intrigue and policymaking. The people concerned are made up of elements of both major political parties and the Government. They appear to be prepared to pay lip service to the idea of nonrecognition, at least until after the November elections. Once they are over, the drive will be underway to soften up the people for the shameful betrayal of our basic principals of freedom and justice.

It is, therefore, time for all good citizens to again speak out against any possibility of welcoming the brigands of Peiping as members of decent world society. The facts prove otherwise. Indeed, one has to go no further back than last Saturday—a day when two American priests arrived in Hong Kong after suffering for several years in Communist Chinese jails. These two priests give the lie to those who would say that the de-Stalinized world of communism has changed its ways.

The same barbaric doctrine which stilled the breath of freedom in countless lives in Europe has been imposed on China and its people live under the threat of brute force. The most elementary rules of morality are trampled underfoot. The most hateful, violent persecution has been perpetrated on innocent people. The people of China are suffering under the most frightful barbarity the world has ever known. And this new phase of brute force has no respect for supernatural values and attempts to destroy in its path all hope.

Let us not join those who would appease for political expediency. Let us not accept assurances of reformed despots until we have witnessed the reforms. It is not sufficient to release 11 more Americans who languish in Chinese dungeons. Only when the people of China are freed from bondage can we deal honorably with their rulers.

Texas City Tin Smelter

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. GAMBLE. Mr. Speaker, the continued operation of the Texas City tin smelter has been the subject of numerous editorials in the publications specializing in the metal trades.

More than a year ago on Friday, March 25, 1955, the American Metal Market predicted that we would continue the operation of the Texas City smelter for another year. This prediction was fulfilled when we passed Senate Concurrent Resolution 26 on April 21, 1955. The American Metal Market on April 29, 1955, commented editorially on this action.

I ask unanimous consent that these two editorials from the American Metal Market, which review the history of the tin smelter, may be reprinted in the RECORD.

The two editorials follow:

[From the American Metal Market of March 25, 1955]

SPRING, AND THE TEXAS SMELTER

With the fidelity of robin redbreast, as harbinger of the returning spring, the issue of the Texas City tin smelter may be counted to occupy the attention of the national Congress. It is true that, owing to the vagaries of the weather, the eastern robins cannot boast the punctuality of the swallows of Capistrano, but they always show up. In 1954, the continued operation of the Texas smelter was the subject of discussion as early as the beginning of March. Not forgotten but merely a trifle delayed, as the robins sometimes are, it is now back with us again, as full of vim, vigor, and vitality as if it had not added another year to its old age.

A year ago we suggested that the smelter would continue in operation for another year. It was not our view that this was because the plant was needed by the tin-consuming industry or in the interest of the national defense. It involved other factors, with which Washington is well acquainted and, whatever the deciding reason, the smelter continued to function, as was anticipated.

It was contended then that time was required for a congressional investigation into the need for the smelter. Although the closing of the smelter had been recommended by the administration, and although no provision has been made in the budget for the continued operation of the smelter after June 30 of this year, the report on this investigation is still awaited. It may become available in a few days, but whatever it may conclude, friends of the operation are already urging its being continued for another year, as, among other things, it would have greater value as a going concern than as an abandoned project.

One must concede that there is considerable validity to such reasoning. Admittedly, the continuing operation of the plant in private hands would appear to depend on the granting of a protective tariff on pig tin (something which has not yet occurred in all our history), but the reason mentioned does constitute a good basis for urging the continued operation of the plant—with the incidental employment it provides for a couple of hundred persons in a community of moderate size. The surprising thing is that such resourceful advocates appear to think it necessary to supplement so ingenious an argument (readily understandable to all political realists) with the rehashing of old chestnuts that time has demonstrated have no merit at all.

One of these old standbys is, of course, the need of the smelter for defense purposes, as it is the only tin smelter in the Western Hemisphere. This argument grows out of the conditions of the last war, when Hitler took over all the European smelters on the Continent and threatened from the air (but never stopped) those in the British Isles, and when Japanese sea power disrupted all contact with Malaya and Indonesia. Falling into the old failure of "fighting the next war by preparing for the last," it overlooks that there is no longer any Japenese sea power to disrupt communications with southeast Asia, and that the Eastern frontier of the Western World is now in Eastern Germany.

It ignores also the fact that we met all tin requirements with a backlog of only about 50,000 tons of reserve stock, whereas today it is pretty well established that the Government can command control of nearly 6 years' consumption at the rate of last years' industrial absorption of primary tin. In short, without any more tin, our accumulated stocks would see us through 6 years' severance of new supplies, and the talk now is that with atomic weapons, a decision could eventuate within a few months.

Next only to our supposed need of the smelter for defense, is the claim that it is essential to the Bolivian economy. This ignores, of course, the fact that about half the Bolivian production has been going to Britain for smelting for a number of years and that all of it went to Europe before the opening of the Texas City smelter in 1942. It can be smelted in Europe today, through private companies, just as it was in the past. There is no need for the United States Government to subsidize the smelter, at a cost of a couple of millions a year, for this purpose.

Indeed, instead of a blessing for Bolivia, the smelter remains something of a curse, since it continues to be an excuse for the disastrous economic policies of the Bolivian Government since it "nationalized" the mines. As private operations, the mines were the main support of the country, and its principal source of foreign exchange. Whatever the faults of the private operations, they were not a drain on the very limited resources of that unfortunate land. They were the main prop of the Nation, even though the Government obliged them to accept only 60 Bolivianos for their dollars, to meet operating expenses and pay taxes, when the free rate would have yielded them as much as 160 Bolivianos.

Since then, nationalization of the mines has benefited the country by turning a source of income into a millstone of deficits. Precise figures are lacking, but it is reasonably well established that, although the number of miners has been vastly increased (some say doubled) costs have so mounted that every pound of tin concentrates pro-

duced results in a loss of possibly as much as 35 cents per pound, which an impoverished Government must make good. The result has been the fall of the Boliviano to about 2,400 to the dollar from 160. It is eloquent testimony that the continued operation of the Texas City smelter has not halted deterioration of the Bolivian economy, let alone sustained it.

As for the smelter being an anchor to windward against the machinations of the international tin cartel, it is worth noting that there has been a world surplus production of tin over the last half dozen years. This has proved to be of manageable proportions only because the output of the Texas City smelter has been impounded in the national stockpiles, instead of overhanging the world's markets.

However, all this may be, let us not be surprised if, in the interest of preserving a supposedly salable piece of merchandise, we continue to hold off some 30,000 tons of tin a year from the world markets, provide a dollar refuge for uneconomical operations in Bolivia and give orators continuing excuse for denouncing cartels. Nor let it cause surprise if we again hear some other reason for continuing the operation of the smelter, for just another year, about the time the robins fly north in March of 1956.

[From the American Metal Market of April 29, 1955]

TEXAS CITY WILL CONTINUE TO SMELT

The Senate, acting on the report and recommendation of its Committees on Armed Services and Banking and Currency, has passed without dissent a resolution favoring the continued operation of the Texas City tin smelter during the fiscal year 1955–56. If this action occasioned surprise in any quarter, it was certainly not in the tin trade, which has grown accustomed to this procedure and recognizes that the realities of politics are pretty much as established a part of our daily life as the merits or demerits of a proposition.

The trade, too, has become quite inured to indulgence by political figures in campaign oratory and would have been greatly surprised if such considerations did not continue to feature reports on this subject. Nevertheless, on this occasion the report rather surpasses all previous efforts and, if it has occasioned any surprise whatsoever, it is because the committees still feel constrained to resort to such deviations from fact to buttress their recommendations.

As a report of the committees points out, tin is produced outside the territory of the United States. Also, there is only one tin smelter on American territory and that is owned and operated by the Government. Consequently, tin is in a most unusual position. It has no constituency, except the staff of the smelter, and therefore is fair and safe game for hunting, since it cannot talk back at the polls. Therefore, once again, tin producers everywhere—except for the highest-cost mines in the world, which are presently operating only with the support of United States subsidies—are made the whipping boy for continuing an operation which the trade is virtually unanimous in regarding as an unnecessary and costly drain on the Public Treasury.

It is asserted that the maintenance and operation of the Government smelter "decreases the risk of the country's being at the mercy of price gouging by those controlling foreign tin supplies." If this were the case, why did the Government consider it safe to divest itself of the control and operation of the much more extensive artificial rubber plants, as natural rubber is wholly a product of foreign areas, identical in respect to two of the most important producers, as the two most important tin-producing areas?

If there existed a "tin cartel" of the character so frequently denounced by certain of our public figures, why is it that business and governments in the tin producing and tin consuming nations of the world have considered it desirable (in the interest of relative price stability and dependable supply) to set up an international tin agreement? If a cartel existed, would not such an agreement be entirely a superfluous duplication? And if such an agreement is regarded as desirable for all concerned—producers and consumers alike—why is it that after 7 years of effort, the required number of assents is still lacking? Can it be that some nations prefer to continue uncommitted, confident in the belief that the Congress itself will assure a tight and constant market for all the production the world's mines can turn out? It could very well be, for the Congress, deliberately or otherwise is contributing to the creation and maintenance of the very condition it denounces.

In 1952, world production of tin exceeded consumption by some 40,000 tons; in 1953 by some 45,000 tons; and in 1954 by nearly 37,000 tons. In free markets, the law of supply and demand still functions. That explained the temporary aberrations of virtually all primary markets—not only that of tin—during the hectic months following the outbreak of hostilities in Korea. Why hasn't it operated, then, on the reverse side, now that there is a persistent excess of supply over commercial demand for tin? Can it be that continuing operation of the Texas City smelter and the stockpiling of its output (37,651 tons in 1953) is contributing to the maintenance of the existing price of tin, without requiring any effort whatsoever on the part of the cartel. Heaven forbid.

It is interesting, nonetheless, to speculate on what the present price of tin would be if the subsidized Texas City output were not being taken out of current consumption, and considerable uneconomic foreign production were not being subsidized out of our public Treasury. Naturally whatever Texas City produces must be isolated, since the administration is opposed to Government competition with private, taxpaying enterprise. One wonders if the committee really intends to denounce others for creating—by unproved attribution only—a condition of which it, itself, is quite undisputably responsible.

Of course it is fantastic to assert that Bolivian concentrates can be smelted in quantity only in the Government smelter." Before the Texas City smelter existed all Bolivian concentrates were smelted in private smelters. Around half the Bolivian output continued to be smelted abroad all through the war and up to this moment. It is nonsense to infer that all Bolivian concentrates could not now be handled in private smelters.

The assertion that our consumption in the war years was as much as the total world production during peacetime is pure, ignorant nonsense. Our consumption was nearer one-third of normal peacetime production. Other similar deviations from reality could be cited, but why go on. Everybody knows the Texas City smelter will continue in operation, but hardly for the reasons cited by our august legislators.

Mr. Speaker, the reports of the Hoover Commission show that the Federal Government is still engaged in numerous operations of a commercial nature which cannot be justified as essential to any legitimate governmental function. The Hoover Commission and President Eisenhower have both stated that Government operation of the tin smelter was not necessary for our national interest. It was because of this that I introduced House Joint Resolution 285 on April 21 to authorize the immediate termination of this venture into socialism.

Mr. Speaker, I realize that the House has passed Senate Concurrent Resolution 26 to authorize the operation of this facility for another year. So that the RECORD may be complete, I wish to explain fully my opposition to the resolution we adopted last week.

The 83d Congress conducted extensive studies of Government operations of a commercial nature and recommended the discontinuance of many such activities with no detriment to any proper Government function and with substantial savings to our taxpayers. The Hoover Commission has also covered this area thoroughly. Unfortunately, when we recently passed the appropriation bill for the Defense Department for the fiscal year 1956, we included a provision requiring congressional sanction to terminate commercial-type activities which the Secretary of Defense believes should be eliminated with no loss to our fighting effectiveness and with benefit to our taxpayers. This act is regrettable and will hamper President Eisenhower in carrying out his basic philosophy which is to limit the intrusion of the Federal Government into fields normally served by private enterprise. His policy is designed to afford the greatest possible opportunity for the exercise of individual initiative by our private citizens consistent with our security and the welfare of our people.

The activities of the Federal Government in areas which we normally do not regard as governmental are so vast that they defy description. When President Eisenhower was inaugurated, the Federal Government was engaged in more than 100 different ventures including bread baking, coffee making, scrap-metal bailing, rope making, clothing manufacture, furniture repairing, the operation of sawmills, laundries and dry-cleaning establishments, paint manufacture, tire retreading, the making of ice cream and motion pictures, operating railroads and ships, and writing life insurance.

The Federal Government, in addition to its proper governmental activities, is the largest single electric power producer in the country, it operates the largest insurance business, it is our greatest banker, it is the largest tenant and the largest landlord, it owns more grain than anyone else, it operates more warehouses, more ships, and more trucks.

Mr. Speaker, some Members of the Congress have been devoting long hours to a study of monopoly and the concentration of economic power. There has never been such a concentration as exists within our Federal Government.

In the comparatively short time since President Eisenhower has been in office great progress has been made in better defining the proper scope of governmental activities. One of the first acts of the administration was to sell the Inland Waterways Corporation to private enterprise for $9 million. It operated barge lines for many years.

The Federal Government is now out of the hotel business. The Department of the Interior no longer operates Bluebeard's Castle in the Virgin Islands. It has been sold with the proceeds going into the general funds of the Treasury

and the property is now on the tax rolls.

The Congress recently authorized the sale of our synthetic rubber producing facilities to private industry. This is probably the largest and most important transfer of activities by the Federal Government to private enterprise.

However, the Federal Government is still operating a tin smelter. Mr. Speaker, I have investigated this operation and I am completely convinced that it is unnecessary for the defense and security of this country which is the only reason that we embarked on this activity in the first place.

Prior to World War II we depended upon the Far East for almost all of our commercial tin supplies. Indonesia and the Malay Peninsula supplied tin concentrates which were smelted in Western Europe. Access to the tin producing areas was denied by the Japanese and to the European tin smelters by the Germans. The only available source of tin concentrates was the Bolivian ores. Steps were taken to erect a tin smelter at Texas City, Tex., to refine these concentrates. This was the proper step for our Government to take as a war measure.

Mr. Speaker, let us contrast this situation with the picture which now confronts us. When the Texas City smelter was built our reserves of tin were most inadequate and industry had given little thought to conservation and substitution. The lack of availability of tin stimulated industry to use its ingenuity and get along with far less tin. For example, prior to World War II most of our tin plate was produced by the "hot dip process." Steel sheets were dipped into molten tin and thus coated with a protective covering necessary for can making so as to ensure the preservation of the contents.

Today, most of our tin plate is produced by an electrolytic process which uses far less tin and produces an even better protective coating. Furthermore, substitutes for tin have been developed so that it can be dispensed with entirely in many applications.

The 79th Congress enacted Public Law 520 providing a realistic stockpiling program. Strategic stockpiles of tin have been accumulating now for many years. The Office of Defense Mobilization has recently raised our stockpiling goals so that today a very substantial stockpile of tin is available. The amount now on hand exceeds the expanded present minimum requirements which adequately meet our immediate needs. Furthermore, tin is once again available from the Far East and can be procured in refined form at prices more advantageous to the taxpayer than through the operation of the Texas City smelter to complete our long range stockpiling program. This very large stockpile goal is quite close to attainment.

Mr. Speaker, if we are to follow President Eisenhower's program of encouraging private enterprise wherever possible, there can be no justification for continuing governmental operation of a tin smelter under these conditions unless we deliberately wish to foster Government operation of industry which, frankly, is nothing but socialism.

A year ago, Charles W. Merrill, the Assistant Chief of the Minerals Division of the Bureau of Mines, Department of the Interior, testified on this subject before the Special Subcommittee on Minerals, Materials, and Fuels Economics, of the Senate Committee on Interior and Insular Affairs. He said:

It is believed however first, that the United States Government should get out of the tin-smelting business. Second, it is believed that it is desirable to have a tin smelter in the United States operated privately, but that that desirability is not sufficient to justify a direct subsidy or tariff protection.

And third the security angle is considered of sufficient importance so that, if it were possible to find some private operator to take over the smelter and agree to run it at some minimum output, the Government would be justified in a lease or sale arrangement which would give only a nominal return of the capital investment that the Government has in the smelter.

That is a general outline of the Interior's approach to this thing (hearings, pt. 10, p. 845).

This statement by Mr. Merrill which I know is supported by the Assistant Secretary of the Interior for Mineral Resources, Felix E. Wormser, a man who has devoted his entire life to the mining industry, represents in my opinion, a sound and proper solution to this problem.

The report of the Hoover Commission on Business Enterprises, page 90, reaffirms this statement. The Commission said:

The Texas City tin smelter was a necessary enterprise begun during World War II. The tin sources in the East had been captured by the Japanese and there was no smelting for South American tin ores in the Western Hemisphere. South America was the only source of tin in this hemisphere, as there are no substantial deposits known in North America. The Texas City smelter property, plant, and equipment cost about $13,200,000 and the current depreciated book value is $6,500,000.

The smelter has produced about 33,000 tons of tin annually. In recent years the metal has been added to the strategic stockpile. The stockpile is now estimated at a 5-year war supply.

The smelter is uneconomical for many reasons and the loss in 1954 was $1,504,233. As there is no reason for continued operation, President Eisenhower on January 2, 1954, recommended that it be closed on June 30 of that year (pp. 90 and 91).

The time has come for us to permit normal economic forces to be operative in this situation and Government operation of the smelter should be terminated as soon as possible.

A Political Standard for Art?

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 17, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Political Standard for Art?" published in the St. Louis Post-Dispatch.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A POLITICAL STANDARD FOR ART?—THE MIRROR OF PUBLIC OPINION

Federal Information Agency canceled American art tour in Australia because of charges that some of the artists represented had had Communist-front associations; 2 editorials denounce this timidity; as if we want totalitarian political tests for art?

The New York Times:

"The United States Information Agency, which is supposed to help foreigners understand what America is all about, seems once again to have been bullied into a position that gives a false and distorted picture of our country that could rejoice only the hearts of our enemies.

"A few weeks ago it was revealed that the USIA had canceled plans to send to Australia an exhibition of American paintings on the subject of sports, because one group of fanatic extremists had claimed that some of the artists represented had had Communists-front associations.

"This time a much more comprehensive exhibition is involved. A collection of close to 100 paintings covering all styles of contemporary American art was being assembled for display under USIA auspices in several European countries next fall and winter. The USIA has indicated it may withdraw its sponsorship because some of the artists do not pass its political test.

"The American Federation of Arts, which is gathering the show together, refuses to exclude their work on such grounds. 'Art,' says the federation's trustees, 'should be judged on its merits * * * and not by the political or social views of the artist.'

"AFRAID OF CONGRESSMEN?

"Presumably what the USIA is afraid of is not the subversive effect of the paintings, because there is none, but the inflammatory effect on a few Congressmen that official American sponsorship of these paintings might induce. Since the USIA is dependent on Congress for the more than $100 million it will expend in the coming year, it doesn't want to alienate anybody. But it is paying a stiff price.

"In the instances cited, and they are not the only ones, the USIA is implying that art must undergo a test of the political legitimacy of the artist. The State Department has on occasion acted similarly.

"This is uncomfortably close to the Nazi and the Communist concept, which is diametrically opposed to the basic philosophy of free American culture."

The Des Moines Register:

"How do you judge a work of art? Do you judge it on its merits or on the basis of the artist's politics?

"In a freedom-loving country the answer would seem obvious. The very idea is barbarous that a work of art is unacceptable because someone says the artist had wrong ideas about politics.

"Yet that is what the United States Information Agency is insisting upon.

"Theodore Streibert, the information agency director, felt it necessary to make concessions to this distorted standard of art and literature during the brief reign of terror by Senator JOSEPH MCCARTHY, Republican, Wisconsin.

"When McCarthyism became a wasm Streibert made fine new resolutions and a good start in practice. Yet in several recent instances he has slipped back into the jellyfish role.

"The worst instance involves the proposed traveling exhibit of major paintings of 100 American artists of the 20th century. The United States agency turned over selection of the paintings (very sensibly) to the respected private American Federation of Arts, which has a standing policy that art should

be judged on its merits and not on the social views of the artist.

"The federaiton picked two distinguished museum officials to make the actual selections. They went to a lot of trouble and picked noted artists of many different styles.

"ART IS WHAT COUNTS

"It would be very surprising if such a collection did not include the work of artists with unorthodox political ideas or associations. We should expect, for example, that some of them might have flirted with communism, some with anarchism. Some might think the whole machine age was a mistake, some that anything pre-machine-age was corny.

"So what? A painting is not a discourse on politics or economics. The painting is what counts. The painter won't travel with the show.

"But no, the USIA found 10 of the 100 artists politically unacceptable. The federation's trustees voted unanimously not to take part in the show if the Government imposed political tests.

"Thus what might have been a dignified and interesting demonstration that America does after all have some culture becomes another weapon for propagandists that culture doesn't have a chance here. It also provides proof to foreigners that we don't live up to our own principles of cultural freedom."

A Catholic or a Candidate?

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 17, 1956

Mr. BEALL. Mr. President, in this election year, it is important for all of us to remember which items should be considered in our evaluation of the qualifications of the various candidates. Whether a man's religion should enter into our thinking was discussed in the Catholic Review, the official organ of the archdiocese of Baltimore, on July 13, 1956, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CATHOLIC OR A CANDIDATE?

Just recently Mr. Adlai Stevenson, or one of his campaign team, let it be known that he is "very friendly to the idea of nominating a Catholic for second place on the ticket."

Just what prompted the release of this information we do not know. However, such an announcement, whether it be made by a Democrat or Republican candidate, is a serious misstep. It is based on an entirely false presumption, and this presumption partakes of the character of an insult.

If the man who makes such a statement were asked, what reason could he give to justify it?

Would he be forced to admit that he is making a play for the millions of Catholic votes that will be available in November? If so, he would be questioning the intelligence of all Catholics, who should be presumed to have commonsense enough to cast their votes to the man best qualified for office, regardless of his religious affiliation.

Or would he say that only a Catholic could possess the eloquence, honesty, knowledge, practical skill, experience, disposition, judgment, and wisdom that the office requires? This nobody could buy, because it is simply not true.

Or would the explanation be that he is attempting to demonstrate a true democratic spirit of fair play? This would be an honorable motive for the act of nominating a Catholic at the convention. But it is the kind of thing that would have to be done without any comment at all, either before or after.

It seems that any candidate might as well make a statement to the effect that he is very friendly to the idea of nominating a baldheaded man for second place on the ticket. Then he can look forward to getting the votes of all baldheaded men, who are far more numerous than Catholics. Or perhaps it should be a left-handed man, or a Rotarian, or a vegetarian, or an antivivisectionist. Once the basic qualifications for office are set aside anything makes sense.

But Catholics will not forget the basic qualifications for office, nor, we hope, will any other citizens of our country. Religious affiliation is not one of those qualifications and it will not be a factor in the casting of any honest ballot.

Eisenhower Will Run

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. CRETELLA. Mr. Speaker, I wish to include for the RECORD an editorial from the July 11 New Haven (Conn.) Register. It mentions the complete candor with which the President and his medical advisers have informed the American people of his illnesses and it calls on the Democratic Party to provide the people with the vital issues and programs which are important to them rather than diverting attention to the so-called health issue of President Eisenhower.

EISENHOWER WILL RUN

For a second time President Eisenhower has let it be known that he considers his health sufficiently robust to stand for election to a second term.

And, as with his initial such announcement last February 29 following his recovery from a heart attack, the overwhelming public reaction has been one of gratification.

For over and above and apart from all political considerations, the President is an unusually popular, respected and admired man. There is thus great joy that his recovery from his recent surgery has been so swift and so complete that, in his own opinion, as well as in that of his top medical advisers, it offers no barrier to his seeking office, or in carrying on the full duties and responsibilities of that office if reelected next November.

As with the first such decision made as February ended and March began, it must again be said that it is expressive of the President's patriotism, his regard for his fellow citizens, and his desire to carry to completion his administration objectives, particularly those relating to the establishment of world peace.

These, without doubt, are compelling reasons. Yet behind them lies knowledge of the sacrifices of self and of family and private life that must be made if the President goes through another campaign and if he should be selected to go on from there to a second term.

It can thus be appreciated, alike by the President's supporters and his opponents, that decision could not have come easily, or without considerable soul searching.

Once again, too, it must be stressed that the President, and his aids and medical advisers as well, have been entirely frank with the American people. They, and he, have concealed nothing. Rather they have been fair and forward in bringing every known item of the President's physical condition into the open for the American people to look at and consider.

From the political standpoint this rather pulls the rugs from under any of those Democrats who would wish to make the President's health a major campaign issue. They, and their ultimate candidates, should go before the voters with specific issues and programs, and trust the November results to their popularity, or lack thereof.

This is as it should be—and as the intelligent voter would want it.

Now, if the President and his party candidates will do the same, by going before the electroate with a clear-cut, acceptable, and sound program directed toward the highest common interest of all of our citizens, the independent voter, who in the immediate past has had little base upon which to rest a choice of party, may yet find that choice made easier—by establishing definite and clear-cut lines of demarcation between the aims and ideals of the opposing major parties.

Soviet Challenge: Russia Needs 30 Years To Catch Up

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 17, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an article entitled "Soviet Challenge—Russia Needs 30 Years To Catch Up," written by J. A. Livingston, and published in the Washington Post and Times Herald of July 17, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET CHALLENGE

(By J. A. Livingston)

RUSSIA NEEDS 30 YEARS TO CATCH UP

Let's not kid ourselves. We can't draw exact mathematical curves of the Soviet Union's economic progress. We can't say within a year or even 5 years how long it will take Russia, at recent rates of industrial growth, to catch up with this country.

We don't know whether the Russians can maintain their recent pace. We don't know whether America's rate of growth, which also has been high in postwar years, is permanently higher or will gradually recede to prewar levels.

But we can say this much with some assurance: It will take the Russians about 30 years to catch up—if they can catch up at all. And 30 years is a long, long time. In which much can happen.

We know what the Soviet leaders are doing, and why. They're concentrating on military devices and industrial equipment; this to enable them to impose communism, the Soviet system, the Russian will, on the world—either by force or persuasion, which means unused force or the threat of force.

Let's not underrate Soviet accomplishments. United States nuclear physicists who have met Russian physicists report they have know-how, learn-how, and plenty of money to pursue their research. Gen. Nathan F. Twining, Chief of Staff for the United States Air Force, warned Congress that Russia could procure a "scientific breakthrough and consequent technological surprise in new weapons." Russian scientists, engineers, and industrialists "know their way around" hydrogen explosions and jet planes.

And yet we daren't underestimate our own strength either. In the battle for industrial leadership, a battle in which we start with a productive capacity 2½ to 3 times that of the Soviet Union, we can count these comparative blessings:

1. Technological and industrial depth. American manufacturing, mining, and transportation equipment and methods are generally the most advanced in the world. In the Soviet Union, engineers, technologists, and technicians are constantly studying and copying American methods. The libraries are full of American business and technical magazines—photostated and distributed by the U. S. S. R. Academy of Sciences.

2. Excellent agriculture. Of this, the American crop surpluses are the best evidence. In the Soviet Union, on the other hand, hunger and famine are always knocking on the door. About 550 million Soviet acres are arable. But adjusted to climatic hazards—cold, short growing seasons, and light rainfall—production efficiency is rated only 70 percent of America's 400 million arable acres. Yet there are 20 percent more mouths to feed in Russia than in the United States.

3. A population accustomed to initiative, to decision-making. In elections, Americans are expected to choose officers to run the Government; in labor unions and clubs, they speak out and again elect officers. In business, men change jobs, invest in machinery, start businesses.

Russia's long history of dictatorship, under czarism and communism, has developed a nation of disciplinarians and disciples. In industry, workers are told what to do. On collective farms, what to plant and how much is determined from on high.

In the present struggle for power Russia now relies on "competitive coexistence." Soviet leaders are shouting "Miroo mir"—"peace to the world." For the moment, force is too risky, too expensive. Instead, Soviet leaders are trying to beat us in industrial knowhow. They've picked our sport.

Soon the Soviet Union will submit its methods, techniques, and industrial boasts to objective tests in a world arena. Will Soviet engineers and technicians who go abroad give as good advice, develop as durable and workable products as Western engineers? It will be significant how the Soviet steel mill in India compares with the steel plant being built by the Kaiser Co. and the plant being built by an English group.

This is an economic contest for men's minds and hearts. To win it, these are 5 do's and 1 don't for Americans. We must:

1. Avoid a depression. For years, Soviet economists have been telling the world that an American collapse is just around the corner; that capitalism is unstable. We are proving, and must continue to prove, "it ain't so." In this, we'd be merely carrying out the mandate in the Employment Act of 1946.

2. Cut tariffs and act the part of a country which is both a great creditor and a great industrial nation. The Russians seem to have a trade advantage. A few men at the top make decisions. If they feel it helps them politically, they'll barter for Egyptian cotton or Burmese rice. Soviet labor or materials can be given away.

3. Maintain a strong Army, Air Force, and Navy, and the research necessary thereto. This has been a double purpose: It prevents Soviet aggression. And it puts pressure on the Soviet leaders. If they insist on an arms race plus an industrial race, let's let them have it. I, personally, believe that the Soviet Union wants a respite from armament production; that eventually, because of domestic pressures for improved living, the Soviet oligarchy will make a move toward realistic reduction in armaments. But, until that happens, we cannot afford to relax, peace talk isn't peace action.

4. Open the doors to an exchange of intellectuals with the Soviet Union. This doesn't mean inviting Soviet engineers and scientists to come to the United States to inspect all secret installations or new processes. We can give them the welcome-mat, hand-on-the-door treatment they gave General Twining and give all westerners. But I do think it would be advantageous to try to send United States students to Russian universities and permit Russian students to come here; also permit an exchange of professors.

5. Not pooh-pooh everything the Russians do. When Khrushchev and Marshal Zhukov announce a reduction in the armed forces, let's act pleased, call it a step in the right direction, rather than criticize and say it's nothing and long overdue. A dog-in-the-manger attitude doesn't help our status with undecided nations, nations that are trying to make up their minds.

6. Finally, we've got to examine our own social order in this age of competitive coexistence. In our society, we may not be paying sufficient attention to the management side—not the management side of business but the management side of the system itself. We don't give financial encouragement to people who want to go into Government—the State Department, the Army, the Air Force—into teaching, into research; to people who have to be as keen, as brilliant, as self-respectful as their counterparts in the Soviet Union, where the greatest rewards go to the commissars, engineers, doctors, professors, industrialists, and intellectuals. By paying the Government, industrial, and cultural elite in relation to their importance to the state, Soviet leaders not only take care of themselves, but also they help to develop and perpetuate the class of men who will make the system flourish.

The Soviet leaders have taken on the industrial champ, the United States. To win, they must regenerate and expand an industrial plant largely outmoded; they must overcome a harsh climate to increase agricultural output; they must increase output of consumer goods; and they must prove to Egypt, India, and other countries of Asia, that their engineering and industrial knowledge is on a par with ours.

In this contest, America starts off rich and well fed—with better plants, better equipment, better-trained technologists and workers, and a better standard of living. The Soviet Union starts as a hungry fighter who has to knock out the champ to eat. Yet, if we can't make the necessary adjustments in our system, in capitalism, to remain the champ, we don't deserve world leadership. That's our problem.

The problem of the Soviet leaders is different. To fulfill their promises, they have to widen responsibility and power—decentralize, a process which has already begun. They have to educate more and more people. As more and more persons get positions of responsibility—a sense of what's going on, as educated persons must—they will want, and eventually get, a say in what's decided. In a 30-year war for industrial supremacy, leaders will change; policies can change; systems might change. Even the Soviet system. Even dictatorship.

Snarling Our Neutrality Line

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. HUMPHREY of Minnesota. Mr. President, earlier today I introduced into the RECORD a number of editorials and articles relating to the so-called snarl on neutrality by President Eisenhower, Mr. Nixon, and Secretary Dulles. I ask unanimous consent to have printed in the RECORD an article entitled "It's Time To Unsnarl Our Neutrality Line," written by Robert Hewett, Minneapolis Star and Tribune foreign correspondent, and published in the Minneapolis Star and Tribune of recent date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S TIME TO UNSNARL OUR NEUTRALITY LINE

(By Robert Hewett)

Critics of India's sad-eyed Prime Minister, Jawaharlal Nehru, call him erratic. But when it comes to neutralism, our own statesmen are winning the booby prize for dizzy diplomacy.

Let's figure out a policy before we do any more talking about this touchy problem of the so-called neutral or uncommitted nations.

There already has been too much confusing talk from the very top—President Eisenhower, Vice President NIXON, and Secretary of State Dulles.

Within 5 weeks we have given the neutrals a friendly pat on the back, brushed them off as immoral, scolded them and indulged in a needless argument with Nehru. And now Dulles implies there aren't really any bad neutrals at all.

These contradictory comments have made our world leadership look somewhat ridiculous, at the very least.

It's worse than ridiculous, however, when we upset our nervous allies and unnecessarily offend such neutralist countries as India, countries which we hope eventually to convince of the dangers of communism.

It's time we curb the moralistic finger shaking and show the advantages of our free world society by deeds and examples, instead of by words which only create resentment. But first some thoughtful statement is needed from the President to tell exactly where we stand with our allies, with the neutrals and even with the Communists.

The diplomatic merry-go-round started June 6 when the President told his news conference many of the young neutral nations were justified in professing neutrality, pointing out that the United States was neutral in its younger days.

This naturally heartened such neutrals as India, Burma, Indonesia, and others. But it caused intense disquiet among leaders of such nations as the Philippines, Pakistan, and Turkey, which have military pacts with us.

The next day, therefore, the White House issued a clarifying statement saying the President did not mean to imply that neutrality would bring more security than mutual-defense alliances.

On June 9, at Ames, Iowa, Dulles went even further in emphasizing American support of mutual defense pacts, saying:

"These treaties abolish, as between the parties, the principle of neutrality, which pretends that a nation can best gain safety for itself by being indifferent to the fate of others. This has increasingly become an obsolete conception and, except under very exception circumstances, is an immoral and short-sighted conception."

This attack on neutrality as immoral upset India's Nehru, who thought the President had defended his position only 3 days before. Last week Indian-American relations were strained further by exchanges between Nehru and NIXON over the Vice President's comments on neutralism in his Philippine speech.

Dulles obviously was trying to steer clear of further brushes with Nehru and other neutrals when he was asked last Wednesday about his attack on neutrality as immoral. Dulles replied he was talking only of neutralism which had no concern for others.

A reporter then asked how a country could express concern for others and Dulles replied that could be done by membership in the United Nations, which commits members to standing together against aggression.

The reporter, obviously puzzled, commented, "I now have the impression that hardly any country would be considered to be immoral in its neutrality policy (under Dulles' definition)."

"I think there are very few, if any," Dulles replied, "although I do believe this: I believe that countries which denounce genuine collective security pacts are seeking to promote a somewhat wrong view of neutrality."

John Hightower, veteran Associated Press State Department correspondent, reported the switch thus:

"Secretary Dulles took United States policy on neutrality around another vast turn today and it wound up going in the opposite direction from that which he had last set for it."

How about straightening out the line, Mr. President?

Prediction

EXTENSION OF REMARKS
OF
HON. GEORGE A. SHUFORD
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SHUFORD. Mr. Speaker, the Franklin Press and the Highlands Maconian, published at Franklin, N. C., in Macon County, is one of the outstanding weekly papers of the Southeast. Its able editor, Mr. Weimar Jones, has written the attached editorial which appeared in the July 12 issue. This timely and interesting prediction reflects his area's thinking on the President's health as a campaign issue.

The editorial follows:

POLITICAL PREDICTION

Here we go, 'way out on a limb, to make a political prediction—two of 'em, in fact.

Prediction No. 1 (and it takes little courage to make this one): Barring early and unexpected physical complications, Ike's latest illness will not change his decision to run for reelection.

No. 2 (and here's where we take our life as a political prophet in our hands): Before November, Ike will be conducting something closely approaching a whistle-stop campaign. The reason? Ike's health.

We figure it this way: The Democrats are going to make the most of the health issue. Here is a man, they'll argue, who'll be 70 before the end of the next administration, and who has had two critical illnesses, and of a different nature, in less than a year.

The President's health, of course, should be an issue. The people have a right to know, before they vote, how good or bad it is. Mr. Eisenhower, himself, in fact, was honest enough to make it an issue, even before the ileitis operation.

And as the issue becomes hotter and hotter, the people are going to want physical evidence of Ike's fitness; they are going to demand to see him in person—and they're going to be doubtful, if they can't. Thus the Republican high command, which has been assuring both Ike and the Nation that a few television appearances will be enough to assure his reelection, will more and more tend to shuttle the President from one end of the Nation to the other.

What will that do to the President's health?

We, of course, don't know the answer; not even the doctors do.

What we do know is we'd hate to have the responsibility somebody's going to have to shoulder, should the strain prove too great.

Rising Young Politicians

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. ADDONIZIO. Mr. Speaker, I am proud that a young resident of the 11th Congressional District, Anthony De Miro, 150 North Park Street, East Orange, N. J., was elected governor at the American Legion's recent Boys' State Convention at New Brunswick. As the East Orange Record pointed out in a recent editorial, it is wise to encourage interest in political affairs among our young people so that they will develop into responsible citizens. I commend to the attention of my colleagues the editorial from the East Orange Record of July 12:

RISING YOUNG POLITICIANS?

In this presidential election year, we'll see a number of advertising and publicity campaigns to "Get Out the Vote." Thinking persons have long been disturbed by the small percentage of citizens who exercise their franchise. Either they don't value their freedom or they take it very much for granted. Good government needs the close attention of the electorate in a number of ways: By voting in all elections, in following the work of those elected while in office, and in participating in party activities. We need to attract more good men and women to governmental jobs, both elected and appointive.

In the democracies of Europe a far higher percentage of the voters turn out on election day and more good men seek political office. This is partly because of a longer tradition of public service and partly because there are fewer good jobs in private industry to compete with government positions. Moreover, we suspect that many Americans do not really understand much about the democratic system. There are not enough courses in civics in the public schools and college courses too often are purely theoretical, explaining the outline of our governmental systems but not how they are really operated by the political parties starting down in the local districts where a handful of votes, if compounded in a majority of other local districts will decide the outcome of a statewide election.

So we commend the additional efforts along these lines being made in many schools, and by private educational efforts, such as the DAR essay contests on citizenship, and the American Legion's annual Boys' State and Girls' State held at New Brunswick for several days each summer young people from all over New Jersey study government, hold party conventions to nominate candidates for state offices and elect officials from the governor down. This seems like the very best way to show the next generation just how it is done and to arouse a lively interest in a political career.

It looks as though some able future politicians are right here in our suburbs. Anthony De Miro, of East Orange, only an alternate delegate to Boys' State, ended up by getting himself elected governor. Sue Marcotte, of Bloomfield, not only was elected a state senator, but then president of the senate, the next position to that of the governor.

The Boys' Towns of Italy and Monsignor Carroll-Abbing

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. RODINO. Mr. Speaker, a heartbreaking and alarming aftermath of the Second World War in Europe was the sudden appearance of homeless and orphaned boys—boys who were forced to beg, steal, and "make deals" merely to keep alive. The immediate problem of getting these children off the streets was not easy. Harder still was the problem of providing them with food, clothing, and shelter.

In Italy, the first serious attempt to tackle this problem was made by Monsignor John Patrick Carroll-Abbing (an Irish priest) when in November 1945 he founded the first Boys' Town of Italy at Santa Marinella. The Boys' Town was conceived of as a practicing self-government democracy run by the children themselves. The administration of the town was and continues to be controlled by a mayor and his councilors who are elected by secret ballot. An assembly of elected members constitutes the legislature which makes rules and laws to guide the behavior of the boy citizens. A judicial committee sees to the proper application of these laws. In this manner the aim of self-government, that is, to make the boys responsible citizens and to increase their understanding of a democratic way of life, was achieved in a remarkably short period of time.

Hard work and training in a particular art, trade or craft—woodcarving, carpentry, painting, shoemaking, and so forth—provides the boys with an opportunity to make a living. A small market

system run by the boys themselves enables them to understand the exchange of money and goods. In the field of education the Italian Government and the American Relief for Italy have helped to provide elementary education by placing teachers in the schools in the Boys' Town. For the young citizens who show ability for higher study, scholarships in private schools are made available. Throughout the whole system great emphasis is placed on individual responsibility and cooperation, both of which aid a great deal toward character building and respect for one's fellow.

Today the Boys' Towns of Italy consist of nine citizens' republics with more than 2,400 youngsters. It is gratifying to see that the dedicated efforts of Monsignor Carroll-Abbing and the generous help of the American Relief for Italy have led to such excellent results. The formerly homeless street boys have found a new hope and a secure home in these Boys' Town republics. Although deprived of their own homes and parental care they respond readily to the help and guidance they are able to receive from their counselor, Monsignor Abbing, and also their fellow citizens.

Texas City Tin Smelter

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. GAMBLE. Mr. Speaker, the disposal of the Government-owned tin smelter at Texas City, Tex., will constitute an important step in removing Government from fields which should be left to private enterprise.

In the past, the Congress hesitated in taking action on a disposal program which was recommended by the President, the Hoover Commission, and almost the entire business community.

As we consider House Joint Resolution 607, which provides for the disposal of this facility, it is helpful to review past informed editorial opinion dealing with Government operation of the tin smelter. Barron's in its issue of May 23, 1955, had a lead editorial entitled "Mischief in Tin—the United States Is Punishing Its Friends, Rewarding Its Foes."

Mr. Speaker, I ask unanimous consent that this editorial be reprinted in the RECORD.

The editorial follows:

[From Barron's of May 23, 1955]

MISCHIEF IN TIN—THE UNITED STATES IS PUNISHING ITS FRIENDS, REWARDING ITS FOES

"Patriotism is the last refuge of a scoundrel," wise old Samuel Johnson once remarked. True perhaps of 18th century London, the good doctor's words also happen to have an uncomfortable relevance to the city of Washington in the mid-20th. For in recent years, in the fair name of defense, an astonishing number of dubious ventures have been sanctioned by lawmakers and executive agencies. Despite the change in administration, the habit has proved hard to break. Admittedly, under Engine Charlie Wilson, the military have abandoned their bootless efforts to equip the B–36, an obsolete piston-engine craft, with jets; similarly, they no longer encourage marginal auto makers to turn our flying boxcars. Yet, even today, if it is wrapped diligently enough in the American flag, the most barefaced raid on the Treasury is still all too likely to succeed.

In this connection, consider the strange case of the Government-owned tin smelter at Texas City, Tex. Some week ago, contrary to White House recommendation, the Senate voted unanimously to continue its operations for another year; the House is expected to soon to follow suit. The drive was led by Senator LYNDON JOHNSON, Democrat, of Texas, hundreds of whose constituents are gainfully employed at Texas City, but the case for the smelter was put on other grounds. In particular, Senator JOHNSON stressed its contribution to the national security, as well as to the welfare of a strategic good neighbor, the tin-rich Republic of Bolivia. The fact is, however, that the tin operation, far from furthering United States interests, is a purposeful drain on the taxpayer. At the same time, it is helping to support a revolutionary South American regime, which has as little respect for liberty as it has for property or law.

The smelter at Texas City, then, should become the object of a controversy as hot as anything in its furnaces. But its beginnings were rather different. The plant was constructed in 1941, when the rapid conquest of the Continent by the Nazis, and the imminent danger to the British Isles and Eastern Asia, threatened to cut off this country from its vital supply of tin. The metal, of course, is the indispensable ingredient of many chemical and metal products, most notably the tin can, without which the civilian economy would grind to a halt and no army could take the field. Completed in the spring of 1942, the Texas City smelter was, and is, the only one of its kind in the Western Hemisphere; it undoubtedly played a valuable role in World War II. Since then, however, with the gradual reopening of the normal channels of trade, its usefulness has been steadily dwindling. It has, besides, been running up a regular deficit of some millions of dollars annually and it has kept Washington, willy-nilly, in the metal business. Hence, for the past 2 years the Eisenhower administration has urged Congress to liquidate the wartime tin program.

These efforts have aroused the wrath of a small but determined group of local politicos who, while not shooting quite as straight as Davy Crockett at the Alamo, have defended their smelter with no less zeal. Their arguments, while rarely on target, nonetheless have been varied and far ranging. To illustrate, the Texans and such out-of-State supporters as Senator STUART SYMINGTON, Democrat, Missouri, lately have concentrated their fire on what they like to call the international tin cartel. This rapacious group, which comprises the tin mines of Malaya and Indonesia as well as the British smelting firms, apparently knows just one business tactic—gouging. Without the Texas City smelter, it is said, the American consumer would be fair game.

While perhaps persuasive in some circles, this line of reasoning overlooks 1 or 2 cardinal points. First, the wide fluctuations of the tin price in the postwar years, so costly at times to producers, suggest that the cartel, if in truth it does exist, is more properly an object of pity than terror. More to the point, the Texas City smelter and the United States stockpile it supplies, far from protecting domestic users, actually tend to raise prices by keeping metal off the market. It's no accident that after every Congressional vote against abolishing the Texas City works, tin quotations have firmed in London and Singapore.

From the angle of defense, the Texans' shots seem equally wild. For one thing, the trade estimates that the United States already has piled up enough tin to last for at least 6 years and possibly 10—longer than any war in its history. But even if more of the metal were genuinely needed, the Republic of Bolivia, which ships concentrates to Texas City, is a dubious source to depend on. The present regime came to power a few years ago through a leftist revolution, and ever since, by word and deed alike, it has shown an alarming resemblance to a dictatorship of the proletariat. It has burned newspapers, suspended civil liberties, and imprisoned thousands of its citizens. In addition, it has expropriated the private tin mines. As a consequence, output has dropped off shortly, inflation is rampant and the people are in growing want. In fact, but for the massive financial aid which Washington foolishly provides, the Government at La Paz in all likelihood would not long survive.

In regard to tin, then, this country has been following the absurd policy of punishing its friends and rewarding its enemies. Other South American countries, which have litle liking for Communist or racist revolts, cannot help but wonder at United States generosity to a fundamentally hostile and anti-Yanqui Bolivia. By the same token, the British are growing restive at what they rightly consider unwarranted senatorial sniping. Just last week the head of one of the biggest tin firms in the United Kingdom protested several "glaring inaccuracies" in a report recently issued by a committee of the upper House, and requested a rertaction. All this suggests that the issues go far beyong the confines of Texas City; more than a local industry is at stake. It's up to Congress as a whole to overrule the Senate and to set things to rights in tin.

Mr. Speaker, I take great satisfaction in supporting House Joint Resolution 607 which will finally authorize the disposal of the Government-owned tin smelter at Texas City, Tex.

More than a year ago on April 21, 1955, I introduced House Joint Resolution 285 to authorize the immediate disposal of the smelter. The Congress, in its wisdom, adopted Senate Concurrent Resolution 26, which authorized the operation of the Texas City Tin Smelter by the Government for another year. It also requested the President "to have conducted a study and investigation for the purpose of recommending the most feasible methods of maintaining a permanent domestic tin smelting industry in the United States."

The President asked the Office of Defense Mobilization and an interagency group comprised of representatives of the Departments of State, the Treasury, Defense, the Interior, and Commerce, the General Services Administration, and the United States Tariff Commission, to make this study for him. The President presented the study to the Congress on March 29, 1956. It has been given careful consideration by the Committee on Banking and Currency, and I heartily endorse its conclusions.

Mr. Speaker, I ask unanimous consent that the conclusions of this committee may be reprinted in the RECORD at this point in my remarks.

CONCLUSIONS

Major conclusions are: that the determination as to the practicability of establishing a permanent tin-smelting industry in this

country should be left to private enterprise; that Government participation in the tin business should terminate and Government operation of the Texas City Smelter should cease not later than June 30, 1956; and that announcement of the termination of Government activities in this field should provide the impetus for serious consideration by private enterprise of the feasibility of establishing such an industry independently. More specifically:

1. Neither the United States defense nor the national economy nor relations with other friendly countries requires the Government's continued participation in a domestic tin-smelting industry in the United States:

(a) The minimum stockpile objective for primary tin metal has been fulfilled, and the long-term objective is expected to be fulfilled by June 30, 1956. These will more than adequately offset the currently estimated deficit in a wartime emergency.

(b) Should a wartime demand arise for domestic smelting facilities as a result of unforeseen developments, an up-to-date and efficient smelter could be built quickly, as in World War II. Ores and concentrates could be contracted for and held in readiness for the smelter, and stockpile metal could supply industry until the new flow of domestic production began.

(c) The national economy has not been dependent upon a domestic tin-smelting industry. Industrial requirements for primary tin are now being met through imports alone.

(d) Countries that have supplied material to the Texas City Smelter and to the stockpile have been apprised of the probable discontinuance of the smelter and the impending cessation of stockpile purchases in ample time to find other markets. Their dependence upon the United States as a market has been a relatively recent development and should not be considered unalterable. However, should a tin-smelting industry be established in this country by private enterprise, obviously there would continue to be a market for foreign ores and concentrates since the domestic raw material supply is negligible.

(e) Some advantages would accrue to relations between the United States and countries supplying ores and concentrates if the smelter were to remain in operation. However, these are not of such significance that the decision concerning its future operation should hinge on them.

2. The establishment of a domestic tin-smelting industry should be left to private enterprise on a free enterprise basis.

(a) Government participation in the tin business should be terminated and the operation of the Texas City Tin Smelter by the Government should cease not later than June 30, 1956. An announcement to this effect and the terms of disposal of the Texas City Smelter should be made promptly, while the smelter is still in operation. Continued Government operation discourages interest of private enterprise in operating a domestic tin smelter.

(b) Government assistance, other than aid to a private operator in negotiations with foreign governments, should not be depended upon for maintenance of a domestic tin-smelting industry. Government subsidy in any form, for other than national defense, national economy, or foreign relations reasons, would be considered unwarranted competition with friendly foreign suppliers and with domestic importers, would be burdensome to taxpayers, and might result in additional expense to domestic tin consumers.

3. Government maintenance of a smelter in standby status is not practicable.

4. A domestic tin-smelting industry does not contribute fundamentally to this country's independence of foreign supplies; there are no known appreciable tin deposits in the United States or in contiguous countries.

5. A domestic tin-smelting industry would not remove the vulnerability of this country to restrictive actions on the part of producers of ores, concentrates, or metal acting in concert (pp. 1–3).

Mr. Speaker, I am not unmindful of the necessity of maintaining adequate supplies of tin to meet any war emergency. Let me contrast the conditions which prevail today with those in existence when our Government decided to construct the tin smelter. At that time Indoneisia and the Malay Peninsula supplied tin concentrates which were smelted in Western Europe. Access to the tin producing areas in the Far East was denied by the Japanese, and to the European tin smelters by the Germans. Our only available source of tin concentrates was from Bolivian ore. These concentrates could not be smelted in the Western Hemisphere. Steps were accordingly taken to erect the tin smelter at Texas City to refine these concentrates. This was a proper step for our Government to take as a war measure.

The 79th Congress enacted Public Law 520 which provided for a realistic stockpiling program. President Eisenhower has implemented this law by establishing two stockpile objectives, a minimum stockpile objective which has been fulfilled for tin, and a long-term objective which is expected to be fulfilled by June 30, of this year. The long-range stockpile objective represents this country's total foreseeable wartime requirements for primary tin, based on an assumption that neither tin in ores or concentrates nor tin metal will be imported from overseas sources in time of war. With the fulfillment of this long-range stockpile objective, there can be no justification on the ground of national security for continued operation of a Government facility of this type.

In the past it has been argued that this facility would lessen this country's dependence upon foreign sources for tin. I am referring to peacetime requirements, as the stockpile meets our needs in time of war. The report of the interagency committee to the President clearly showed that this dependence would not be lessened by the presence of a tin smelter as long as we still require imports of tin concentrates. Mr. Speaker, I ask unanimous consent that the chapter of the report to the President reviewing this subject may be reprinted at this point in my remarks:

1. Dependence of the United States on other countries: Since the United States has no appreciable tin deposits, she must import practically all her supplies of tin from other countries, some of which are substantially underdeveloped and often subjected to political disturbances. She is not a substantial exporter of primary tin, but does export a large quantity of manufactured products containing tin, principally tinplate, canned goods, and machinery.

Before the construction of the Texas City tin smelter, commercial supplies of metal were imported primarily from Malaya, with lesser amounts from Indonesia, the Netherlands, and the United Kingdom. After the smelter was established, Bolivia, Indonesia, the Belgian Congo, and Thailand became important sources of concentrates for the United States.

With the advent of war in Europe in 1939, the United States had no significant stockpile of tin, neither was she adequately prepared to offset the possible loss of access to the major tin-producing areas in the Far East. Germany's assault on Belgium, the Netherlands, and France in 1940 provided the incentive for a greatly intensified national defense effort, and the Department of the Treasury began acquiring a stockpile under Public Law 117 (76th Cong.). As the quantity of tin available for purchase was limited by quotas, the United States Government negotiated with the International Tin Committee for removal of restrictions in exchange for a guaranty that the United States would purchase all supplies at a stipulated price. As a result of these negotiations, production was permitted at the rate of 130 percent of a predetermined quota for the year beginning July 1, 1940, as compared with 80 percent level in force during the second quarter of 1940. This represented virtually unrestricted production. The United States Government contracted to purchase all supplies of tin offered, up to 75,000 tons, at not less than 50 cents a pound, cost, insurance, and freight, domestic ports, which enabled industry to build up inventories far above normal needs and the Government to add to the stockpile of tin.

Smelting facilities in the United States cannot in time of peace of war lessen this country's dependence upon foreign sources, nor can they remove vulnerability to restrictive actions by producers of ores, concentrates, or metal, acting in concert. An assumption that domestic smelting facilities could remove this vulnerability would be valid only if it could be assured that some major seller of concentrates would pursue a policy different from that of those producers acting in concert. There is nothing in the record of previous actions by any seller to substantiate this point of view. An effective safeguard in the event of a war emergency is the United States stockpile of tin metal. In normal times, the satisfaction of United States industrial needs is dependent upon international trade under which this country's industry can acquire supplies from abroad in adequate quantities and at reasonable prices (pp. 9–10).

Mr. Speaker, I know of no subject which has been more carefully reviewed over the years than the problem of insuring adequate tin supplies.

In 1954, a Special Subcommittee on Minerals, Materials, and Fuels Economics of the Senate Committee on Interior and Insular Affairs received testimony on the operation of the Texas City Smelter from Charles W. Merrill, the assistant chief of the Minerals Division of the Bureau of Mines, Department of the Interior. Mr. Merrill said:

It is believed however first, that the United States Government should get out of the tin-smelting business. Second, it is believed that it is desirable to have a tin smelter in the United States operated privately, but that that desirability is not sufficient to justify a direct subsidy or tariff protection.

And third, the security angle is considered of sufficient importance so that, if it were possible to find some private operator to take over the smelter and agree to run it at some minimum output, the Government would be justified in a lease or sale arrangement which would give only a nominal return of the capital investment that the Government has in the smelter.

That is a general outline of the Interior's approach to this thing (hearings, part 10, p. 845).

Mr. Merrill's statement has been supported by the Assistant Secretary of the Interior for Mineral Resources, Felix E. Wormser, who happens to be one of my constituents. He is a man who has de-

voted his entire life to the mining industry.

The Report of the Hoover Commission on Business Enterprises, page 90, reaffirms Mr. Merrill's statement. The Commission stated:

The Texas City tin smelter was a necessary enterprise begun during World War II. The tin sources in the East had been captured by the Japanese and there was no smelting for South American tin ores in the Western Hemisphere. South America was the only source of tin in this hemisphere as there are no substantial deposits known in North America. The Texas City smelter property, plant, and equipment cost about $13,200,000 and the current depreciated book value is $6.500,000.

The smelter has produced about 33,000 tons of tin annually. In recent years the metal has been added to the strategic stockpile. The stockpile is now estimated at a 5-year war supply.

The smelter is uneconomical for many reasons and the loss in 1954 was $1,504,233. As there is no reason for continued operation, President Eisenhower on January 2, 1954, recommended that it be closed on June 30 of that year (pp. 90 and 91).

Mr. Speaker, the time has come for us to permit normal economic forces to be operative in this situation. Government operations of the smelter should be terminated as soon as possible.

The resolution reported by the Committee on Banking and Currency, House Joint Resolution 607, provides for operation of the smelter to no later than January 31, 1957. In other words, we are extending the authority for Government operation of the smelter for an additional 7 months from its expiration under present law on June 30, 1956. This is a wise provision as it will promote the sale of the smelter as a going concern if private enterprise can be induced to take over the facility.

The 83d Congress conducted extensive studies of Government operations of a commercial nature and recommended the discontinuance of many such activities with no detriment to any proper Government function and with substantial savings to our taxpayers. The Hoover Commission has also covered this area thoroughly. Fortunately, when we passed the appropriation bill for the Defense Department for the fiscal year 1957, we removed the provision requiring congressional sanction to terminate commercial-type activities which the Secretary of Defense believes should be eliminated with no loss to our fighting effectiveness and with benefit to our taxpayers.

President Eisenhower's policies are designed to afford the greatest possible opportunity for the exercise of individual initiative of our private citizens consistent with our security and the welfare of all of our people.

The activities of the Federal Government in areas which we normally do not regard as governmental are so vast that they defy description. When President Eisenhower was inaugurated the Federal Government was engaged in more than 100 different ventures, including bread baking, coffee roasting, scrap metal baling, rope making, clothing manufacture, furniture repairing, the operation of sawmills, laundries, and dry-cleaning establishments, paint manufacture, tire retreading, the making of ice cream and motion pictures, operating railroads and ships, and writing life insurance.

The Federal Government, in addition to its proper governmental activities, is the largest single electric-power producer in the country, it operates the largest insurance business, it is our greatest banker, it is the largest tenant and the largest landlord, it owns more grain than anyone else, it operates more warehouses, more ships, and more trucks.

Mr. Speaker, some members of the Congress have been devoting long hours to a study of monopoly and the concentration of economic power. There has never been such a concentration as exits within our Federal Government.

In the comparatively short time since President Eisenhower has been in office great progress has been made in better defining the proper scope of governmental activities. One of the first acts of this administraiton was to sell the Inland Waterways Corporation to private enterprise for $9 million. It operated barge lines for many years.

President Eisenhower has taken the Federal Government out of the hotel business. The Department of the Interior no longer operates Bluebeard's Castle in the Virgin Islands. It has been sold with the proceeds going into the general funds of the Treasury and the property is now on the tax rolls.

Our synthetic rubber producing facilities have now been sold to private industry. This is probably the largest and most important transfer of activities by the Federal Government to private enterprise. President Eisenhower on April 30, 1956, submitted his report to the Congress concerning the Nation's rubber requirements and resources, pursuant to section 10 of the Rubber Producing Facilities Disposal Act of 1953. He recommended the disposal of the Akron laboratories to private industry. I voice my approval of this further step in getting Government out of business.

Mr. Speaker, passage of House Joint Resolution 607 will save the taxpayers millions of dollars. It will promote private enterprise, and it will be done without, in any way, jeopardizing our national security, as the attainment of the long-range stockpile objective for tin assures us of ample supplies of this vital material to meet any contingency. We must get the Federal Government out of the tin-smelting business and continue our efforts to promote private enterprise in essentially commercial fields.

Increasing Rates of Service-Connected Compensation for Veterans

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 12, 1956

Mr. SAYLOR. Mr. Speaker, it is my fervent hope that the Senate will give early and favorable consideration to H. R. 12038, the bill to increase rates of service-connected compensation for veterans. I voted for this legislation, which was enacted by the House last week, because I feel that it is of monumental importance to both veterans and their dependents.

To reject cost-of-living increases to men who were disabled in the cause of their country would be a repudiation of a legal and moral contract. Original rates were based upon the purchasing power of the dollar at the time of enactment of the original legislation. Certainly the compensation decided upon was not in excess of actual need. Now a dollar buys less food, less household equipment and fewer clothes. We would be delinquent in our sworn obligation as Members of Congress if we did not remedy that disparity.

No disabled veteran wants eternal expressions of sympathy for the loss of limb or other maiming sustained in the battle in behalf of the Stars and Stripes. But every veteran whose ability to provide for himself and family was impaired during military service rightfully expects an opportunity to enjoy the necessities, if not the conveniencies and comforts of life.

I feel that the increase in compensation, while still not providing more conveniences and comforts, will at least allow for necessities. Perhaps the pittances have not been increased to the extent they should, but at least the legislation is a move in the right direction.

Despite the tributes delivered on Memorial Day to those who have died in action, the widows and orphans of our heroes are still being neglected. I hope, therefore, that it will be not too long until the proper legislation has been adopted.

What Do We Know of the Signers of the Declaration of Independence?

SPEECH
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. SIEMINSKI. Mr. Speaker, many fine things have been said of the 56 giants who signed the Declaration of Independence.

Their signature on the document meant death had we lost the war that led to the creation of the United States.

It is fitting in this month in which we rededicate our independence to ask, "What do we know of the signers of the Declaration of Independence?"

That question is answered with a brief sketch on the life of each of the signers in a booklet compiled by Mr. Harvey Thomas, and published over 33 years ago in Newark, N. J., by the Prudential Insurance Company of America.

Under unanimous consent, I ask that the booklet be reproduced in the RECORD. I trust that it will be of interest to all:

THE SIGNERS OF THE DECLARATION OF INDEPENDENCE

(By Harry Thomas)

A FOREWORD

For a generation after the battle of Thermopylae the Spartan children were required to repeat daily the names of the heroic 300 who held the pass with Leonidas. The youth who was taught grew into the father who told, and so on and on down through the years. But what of us in America? How many of our early-day immortals can we mention? The 56 patriots who gave us our Charter of Freedom—a declaration that blazed the ascending trial of civilization and that opened the great human highway to intellectual improvement and moral culture—what of them? To be sure we know of Hancock, of Adams, of Jefferson, of Franklin, of Morris. Their memory is secure from the injuries of time. But what of Williams, of Guinett, of Rodney, of Gerry, of Lee, of Paine, and the rest of their associates? They also laid their all upon the altar of life, liberty, and happiness, withholding nothing. And they knew their peril. Not carelessly, but reverently, they signed, and by their action ushered in a new era for humanity. When in their dreams and ideals they recognized and established our form of government, these God-endowed, deliberate men gave to the people and to posterity a towering, permanent monument of splendid service; a shaft of wisdom upon which all nations of the earth may gaze with repsect and admiration. No crash of cannon echoes through the ages to sound the valor of their act, but we do well to remember it and something of their lives. They are an eternal illustration of the truth that courage is not a monopoly of the battlefield and that every man who does his duty fearlessly, disregarding the cost, strikes his own blow for a better day. In the light of their wonderful work each and every signer of the Declaration should be better known; their endurance, enterprise and resolute faith should be briefly recorded so that Americans may reacquaint themselves with these heroes and thus awaken more of the fire of patriotism.

In preparing these sketches an effort has been made to see only the human side of the signers, to find if possible the particular sacrifice they made, and to effect an intimate, personal contact between the reader and the subject. In exhibiting, in this way, so numerous a combination of contemporary statesmen engaged in the same transaction and confined to uniformity of scenery and occasion, there may have frequently been unavoidable repetition. And of some but little has been left to us. In such instances it has been thought more prudent to offend by brevity than fatigue by monotonous enumeration. No adopted American will read of these true men and their volunteered sufferings without a richer reward of conscientious appreciation. No son of liberty shall think of these men without thanks for every drop of blood that links him to the heoric ancestry of America. Offered, therefore, as a pause in this boastful, rushing, forward-looking age, when history and tradition seem to be of small concern to us, this little booklet goes forth.

H. T.

NEWARK, N. J., 1923.

THE JOURNAL HISTORY OF THE DECLARATION OF INDEPENDENCE

1776

June 7: Richard Henry Lee, of Virginia, introduces famous resolution—"Resolved, that these united colonies are, and of right ought to be, free and independent states."

June 8: Congress resolved itself into a committee of the whole to formally consider Lee's proposal.

June 10: Benjamin Harrison, as chairman of the committee, reported that the matter be laid over for a full Congress on July 1, and that a special committee be appointed to draft a declaration dissolving allegiance with the mother country.

June 11: Congress appointed Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman and R. R. Livingston to draft the immortal document of freedom.

June 25: Pennsylvania presented resolutions expressing a willingness to concur in independence.

June 28: New Jersey delegates reported their State had directed them to hurry with their concurrence.

July 1: Benjamin Harrison reads draft of Declaration and offers this resolution—"Resolved, that this Congress will, tomorrow, take into consideration the Declaration respecting Independence." In the debate that followed, charges of treason were shouted against William Zubly, the German member of the Georgia delegation, and he was expelled from Congress.

July 2: Formal Declaration corrected and agreed to.

July 3: Debate on revised draft.

July 4: With the exception of three members of Pennsylvania delegation the entire Congress formally ratified the immortal paper. Declaration signed by John Hancock as President of Congress.

July 19: Engrossed copy of Declaration on parchment ordered for all signatures.

August 2: Declaration signed by 50 Members of Congress. Dickinson, of Pennsylvania, refused to sign, and never did so.

August 27: Signed by George Wythe.

September 4: Signed by Richard Henry Lee, Elbridge Gerry, and Oliver Wolcott.

November 19: Signed by Matthew Thornton.

1781: Signed by Thomas McKean.

The Declaration was signed in this order: Hancock, Bartlett, Livingston, aPine, Floyd, John Adams, Lewis, Walton, Samuel Adams, Stockton, Huntington, Hopkins, Hart, Clark, Lewis, Morris, Morton, Francis Lightfoot, Lee, Penn, Sherman, Whipple, Witherspoon, Ellery, Hooper, Robert Morris, Harrison, Williams, Franklin, Paca, Hopkinson, Stone, Carroll, Jefferson, Taylor, Rutledge, Hewes, Smith, Ross, Clymer, Heyward, Gwinnett, Read, Wilson, Lynch, Chase, Braxton, Rush, Hall, Rodney, Nelson, Middleton, Wythe, R. H. Lee, Gerry, Wolcott, Thornton, McKean.

The youngest signer was Edward Rutledge, age 27 years.

Delegates Clinton, Alsop, R. R. Livingston, Wisner, Humphreys, and Rogers never did sign the Declaration.

Although delegates Thornton, Rush, Taylor, Clymer, Smith, and Ross signed the Declaration, they were not Members of Congress when it was adopted on July 2 nor when it was ratified on July 4.

Those who voted steadfastly against the adoption of the Declaration were delegates Dickinson, Humphreys, and Willing, all of Pennsylvania.

The longevity of the signers is remarkable. Three lived to be over 90, 10 over 80, 11 over 70, 14 over 60, 11 over 50, 6 over 40, and 1 died at 30.

The signers represented many vocations. Twenty-four were lawyers, 14 were farmers, 4 were doctors, 1 was a minister, 3 prepared for the ministry, 1 was a manufacturer, and 9 were merchants.

The original signed copy of the Declaration was in the hands of the President of the United States until after the War of 1812. When Washington was invaded during that struggle and after President Madison had fled the White House, the President's wife, Dolly Madison, who had stayed behind to the last minute, saved the Declaration by carrying it away with her. Subsequently she returned it, and it was placed under the charge of the State Department. It was hermetically sealed in 1894 and is only exhibited now on very rare occasions.

THOMAS JEFFERSON (1743–1826), VIRGINIA

Thomas Jefferson chose the risk of fighting for his fellowmen. His entire life was an exemplification of service to mankind. As third President of the United States and writer of the immortal Declaration, his name shines with further brilliancy in the great galaxy of American patriots. His pre-Revolutionary fervor in the Virginia House of Burgesses stamped him as a coming man and his election to Congress forced him into a position of eminence at once. Offered the seductive emoluments of a crown, he might have passed his life in soft and uneventful paths, but he chose instead the roadway of freedom. He was chairman of the committee that was appointed to report the Declaration, and has always been credited with the authorship of that famous document. Recent historians claim, however, that Jefferson was chosen more for his beauty of penmanship, and that to Adams should go the glory for the words. Be that as it may, Jefferson's advice was listened to and went far toward starting the United States on its prosperous career. He retired early from Congress, and after serving as Governor of Virginia was Secretary of State under Washington, and succeeded Adams to the presidency. His life was of no common character. He died at Monticello on the 50th anniversary of the adoption of the Declaration at almost the same hour his great contemporary, John Adams, was dying in Massachusetts.

JOHN ADAMS (1735–1826), MASSACHUSETTS

To have signed such a document as the Declaration of Independence was of itself a rare felicity; to have been a powerful agent in producing the event which that Declaration signalized was a glory still more distinguished; to have won the commendation of a Nation through election to its presidency was an additional honor; to have brought into the world a son who later succeeded to the Chief Magistracy of the land his father had helped establish; and to have lived besides to see, at the expiration of half a century, the prosperous condition of the new Nation, seems a consummation almost beyond possibility. Yet noble old John Adams signed and gave and saw and died, and with his last breath those near his bedside heard him utter the words "Independence forever." Sturdy veteran of the Revolution, he knew his duty and he measured up to the responsibility. He risked all for freedom, and he won. Such men forever teach the grandeur of service. As a leader in the early Boston Massacre days, he wrote Patrick Henry, "I am of your mind." In Congress he was termed "the colossus of debate." His broad and courageous intellect gave to Jefferson aid in the writing of the great Declaration, and in later years he was sent to Holland to raise money for America, then to England as America's first ambassador, and then back home to be chosen Vice President under Washington. In 1796 Washington took leave of public life and the people were obliged to look for a successor in the presidency. The choice lay between Adams and Jefferson, and the former was selected, the second Chief Magistrate of the United States. He served but one term, and retired to the home of his boyhood, at Quincy, Mass., where he died on the 50th anniversary of the signing of the great charter to which he had given his name, a glorious inspiration to all mankind. Jefferson had died but a few hours before him. Each departed cheered by the benedictions of his country.

BUTTON GWINNETT (1732–77), GEORGIA

Political impatience and irritability over failure to regain the confidence of his State cost Button Gwinnett his life. His fate affords a melancholy example of the pernicious

consequence of dueling and a striking illustration of the triumph of the fashion of his day over reason. The memory of Gwinnett cannot be sullied, however. He was the most steadfast of patriots and one of the most faithful and ardent supporters of independence. His fondness for popularity and an earnest desire not only to command the admiration of his fellows but to use that command in a dictatorial way involved him in a controversy with a political adversary who killed him. Gwinnett was of English birth and emigrated to South Carolina in 1770, being chosen 5 years later to represent its sister State of Georgia in Congress. At first he showed an indifferent interest in the Revolution, but once his sympathies had been aroused he took an enthusiastic part in all the proceedings of the Colonial Government. One of his Georgia colleagues was Zubly, the traitor, who temporarily exerted an influence over Gwinnett. After Zubly had been accused of betraying the secret sessions of the Congress and had been obliged to flee aboard one of the enemy's ships, Gwinnett suffered somewhat from his association. He returned to Georgia, however, and to test out his popularity ran for governor, to meet with defeat. Subsequently he organized a company of militia and insisted that a friend be placed in command of it. This request was likewise scorned, and futile efforts to force his way to the political heights from which he felt he had fallen so exasperated him that the duel resulted. But his memory, stamped as it is upon the charter of our independence, must be coeval with the duration of America. He lived in a time of public excitement, and ever braved the storm for liberty and freedom.

BENJAMIN FRANKLIN (1706–90), PENNSYLVANIA

Benjamin Franklin! His devotion to his country, his sobriety, his extraordinary perseverance and resolution, his candor, his scrupulous veracity, his fidelity to all civil and moral obligations, his wisdom as a man of science, his wit as a man of letters, his writing of an Autobiography that will last forever, make, perhaps, any more particular notice of his life superfluous and impertinent. From the day he strolled up Market Street in Philadelphia with a loaf of bread under his arm his name became unseparably interwoven into the history of his native land. He began life as a soapmaker, and by rigid economy and industry made himself one of the great men of the whole world. A printer, the first publisher of the Saturday Evening Post, of Poor Richard's Almanack, the founder of the vegetarian cult, the discoverer of the use of electricity, the first to utilize that new power to fire gunpowder and give magnetism to steel as well as to use the same force with which to kill, he early informed the Adamses and the Jeffersons and the Henrys and the Washingtons that "it is right we should be free, but let us understand that it will mean our country will be ravaged and our towns laid in ashes; as for myself, my chief wealth is in little properties, and of these, indeed, they may make bonfires and reduce to dust, but the fear of losing them will never alter my resolution to resist tyranny to the last." In Congress he was selected with Adams and Jefferson to draft the Declaration, and once it had been presented and ratified he signed unafraid. Afterward, at the ripe old age of 71, he was sent to France and formed a friendship with Lafayette, to whom he gave a letter of introduction to Washington. After concluding an alliance with France he interested himself anew in colonial affairs and continued in Congress long enough to give assent and signature to the Federal Constitution. Above his grave is a small marble slab bearing the sole inscription, "Benjamin Franklin." It is enough. No monument, however great, could express the obligations of posterity.

JOHN HANCOCK (1737–93), MASSACHUSETTS

As president of the Congress and by the fervor of his inspiration, John Hancock led the way and gave immortality to his name as one one of the chief patriots. "My name shall be written large enough for the king to see for all time," he said, as he boldly inscribed his signature, thus giving courage to the more tremulous as they faced the parchment. Hancock lived amidst great wealth, earning the early contempt of his heroic associate, Samuel Adams, who scorned riches and admired the poor. But when the time came for action, soon after the Boston Massacre, Adams gave his heart to Hancock and they became inseparable in their affections for each other and their country. A commission in the enemy's army was offered Hancock would he declare allegiance to the king, but he replied, "Tell your majesty I would rather be a private against tyranny than a field marshal for the king." The battle of Lexington and Concord was prefaced by a desire to capture Hancock and Adams, and immunity was later promised all Continentals if the two leaders were given up. To the glory of the Nation the proffer was spurned and the heroes went on their illustrious way, leaving to posterity the glory of sacred service and steadfast Americanism. Hancock was elected and reelected Governor of Massachusetts until he died.

THOMAS STONE (1743–87), MARYLAND

The patriots of the Revolution, notwithstanding the greatness of their deeds, were in general men of impressing modesty. Several are distinguishable from their colleagues by little that is individual or peculiar There could scarcely be any leaders were it different. Such was Thomas Stone, a lawyer, who early espoused his country's cause, but whose retiring disposition and evident desire to keep in the background have left little biographical material to posterity. Let it be recorded, however, that he left the reputation of a disinterested patriot, a useful citizen and a worthy man.

PHILIP LIVINGSTON (1716–78), NEW YORK

As one of the founders of American independence Philip Livingstone foresaw the difficulties, perplexities, and sacrifices that were to be encountered in drawing the sword and severing the empire. At no time, however, did he hesitate to assume the highest responsibilities and put in jeopardy his life and his fortune. When it became known, through the perfidy of a traitorous member of Congress, that Livingston had been selected as an important committeeman, his family was informed of the consequences that would be its share in this act. Livingston sent for his wife and children, and for 4 years they were in exile, separated from their home and living on the bounty of sympathetic friends. After the war Livingston sold all he possessed and turned the proceeds over to his Government to help maintain the public credit. Livingston saw into the souls of men and proved peculiarly useful in the important drama that stamped his name upon the pages of American history.

GEORGE WALTON (1740–1804), GEORGIA

In his youth George Walton was apprenticed to a carpenter and for 4 year plied the hammer and the saw. His ambition led him into the study of law at nights, and before he was 30 he was considered one of the leading barristers of his State. History refers to him as a brave and able man. He is not known to have taken any particular part in the proceedings of the Congress except to be a vigorous proponent of independence. He was one of the very last to sign the Declaration, and later engaged in army service under Washington. He was twice elected Governor of Georgia and was that State's first United States Senator. His marked patriotism is a lasting monument to his worth and a rich legacy to his country.

SAMUEL ADAMS (1722–1803), MASSACHUSETTS

With the names of Washington and Jefferson and Franklin stands inseparably united that of Adams, and together they form the brightest constellation which illumines the Revolutionary sky of our country. Samuel Adams, "The Father of the Revolution," failed as a businessman but won as a patriot. He was the most remarkable of all the signers. An early writer of protests to the king, a great and fiery speaker in the debates against kingly rule, courageous and ardent, he knew how to bend the passions of others to his purpose and keep the fires of freedom brightly burning. In all those days of peril, while the hearts of others were ready to faint, Samuel Adams remained firm. Even when General Gage placed a bounty on his head, he sent this message: "Tell your king it is the advice of Samuel Adams to no longer insult the feelings of an exasperated people." In Congress he rendered most important service, engaging in the cause with all the zeal of a reformer, the confidence of an enthusiast, and the cheerfulness of a voluntary martyr. His resolute decision, his increasing watchfulness, and his heroic perseverance saved the day for his country on several occasions. Samuel Adams will always live in the hearts of Americans.

WILLIAM PACA (1740–99), MARYLAND

William Paca gave to his country the example of a superior mind devoted with pure disinterestedness to the establishment of her liberties. His State embarrased him at the outset of his career by opposing any severance of relations with the mother country, and it was not until Carrol of Carrollton had engaged with him that they were enabled to lift this restriction. In Congress Paca served on a number of important committees and was otherwise instrumental in making himself felt in the cause to which he had given his heart. He was Chief Justice and Governor of Maryland, and left to his country the inheritance of an illustrious name.

CAESAR RODNEY (1728–84), DELAWARE

Sheridan's ride of 20 miles to save the day at Cedar Creek has its place in history, and rightly so, but what of the ride Caesar Rodney took through 80 miles of storm in the early morning of July 2, 1776, to reach Philadelphia in time to save his State from the humiliation of not approving the glorious document of freedom. Rodney took it, rising from what his physicians considered his death bed. He arrived in the halls of Congress just as the name "Delaware" was being called. "I vote 'yes,'" said Rodney, as he sank into his seat exhausted. He was a soldier in every sense, but had been obliged temporarily to quit Congress, owing to a cancerous growth that had destroyed one side of his face. The malady eventually killed him, and though he yearned to return and keep his Deleware colleagues in line, permission was refused him. Then came July 1, 1776. His conferee, McKean, had learned that the Delaware delegation was split, and he sent a secret messenger to Rodney's home with instructions to carry the message personally to the sick man. It was delivered, and Rodney, suffering from the fever of his complaint, dashed off into the mud and rain. Delaware had been saved and the Colonies declared as a unit.

EDWARD RUTLEDGE (1749–1800), SOUTH CAROLINA

The name of Rutledge may never be eclipsed in the history of South Carolina. That grand old colonial State gave to her country two immortal sons, Edward Rutledge, signer of the Declaration, and John Rutledge, active Revolutionary worker, Governor, Chief Justice of the State and a Justice of the United States Supreme Court. Brothers in the flesh, they became brothers in the common cause, companions through sacrifice and suffering, at all times devoted in their affections for themselves and their country, and dying within a short time of each other

in 1800. Edward was only 25 when he was sent to the Congress and but 2 years older when he affixed his name to the document of freedom, the youngest of all the signers. Would there be likelihood today of a youth of 27 being chosen to pass judgment upon a governmental project so serious and grave in its consequences? Yet the talents of Edward Rutledge were considered so mature as to result in the added honor of his being selected with Adams and Lee to draw a preamble to the original resolution. At the siege of Charleston he was captured and imprisoned by the enemy in St. Augustine. His release was soon effected, however, and he returned to South Carolina in time to succeed his brother John as Governor. Long live the memory of Edward and John Rutledge.

SAMUEL CHASE (1741–1811), MARYLAND

Samuel Chase seems to have been one of the patriotic radicals of his day. None appears more actively engaged in his country's service and few were more distinguished. Chase was a man of vigor and individuality. He was outspoken in his criticism of those who differed with him and his frankness kept him in difficulties. He early was an illustrious lawyer and statesman and was a member of his State legislature for 20 years before entering Congress. When Maryland rebelled against approving the Lee resolution for independence, Chase served notice he would quit the commonwealth. Through his instrumentality and the assistance of Paca and Carroll, Maryland fell into line. And when the Pennsylvania Quakers of the time voiced their disapproval of war, Chase offered a resolution providing for the arrest and imprisonment of every one taking that position. After serving as Chief Justice of Maryland he was advanced to the Supreme Court of the United States. While a member he became involved in a controversy with John Randolph of Roanoke, who sought his impeachment. His age, his Revolutionary services and his pure judicial character all pleaded in his favor and he was acquitted, to finish his course in universal respect and peace.

CHARLES CARROLL OF CARROLLTON (1737–1832), MARYLAND

When it came time for Charles Carroll to sign the Declaration, John Hancock is said to have facetiously remarked, "Carroll, this shouldn't disturb you, as there are so many Carrolls you'll not be suspected." The Maryland signer poised his pen a moment, then wrote boldly "Charles Carroll of Carrollton," and as he finished he turned to Hancock and said, "Let there be no doubt; there is only one Carrollton." Brave old hero, who lived to see his country firmly established, the last survivor of all the signers. Another of the wealthy delegates, Carroll knew he was sacrificing a fortune for freedom when he inscribed his name. "There go a few millions," said a little group of patriots standing nearby as Carroll signed, and Carroll heard. "What are millions!" he exclaimed. "Neither my millions nor my writing will settle this just cause, but the bayonet will." And he returned to his State to help organize the Army. Carroll was not a Member of Congress when the Declaration was ratified. He did not take his seat until July 18, but gave immediate assent. He was the first United States Senator from Maryland. At an age of past 90 he laid the cornerstone of the first Baltimore and Ohio Railroad. His descendants and his estate still survive in Maryland.

THOMAS HEYWARD, JR. (1746–1809), SOUTH CAROLINA

Along with the mellow wisdom of Franklin, the independent eloquence of Adams, and the aspiring genius of Jefferson, we have the unselfish devotion and enlightened foresight of Thomas Heyward, Jr. His judgment was sound and his disposition ardent. He conscientiously and fearlessly embarked in the Revolution at the youthful age of 28, and was neither blind to its dangers nor indifferent to its morality. His life, his estate, and his reputation he cast upon the waters of strife, and gladness was in his young heart. He was a lawyer and judge before he went to Congress, and after the signing returned to his native State to join the Army. At the fall of Charleston he was captured and imprisoned by the enemy. It was a period that tested the best qualities of manhood, and his spirit never faltered nor his courage failed.

BENJAMIN HARRISON (1740–91), VIRGINIA

Two presidents of the United States and a signer of the Declaration of Independence would seem a reasonably fair contribution from the Harrison family to the history of their country. Yet we find that in 1640 their first ancestor settled in this country and immediately became embroiled with local crown authorities over individual rights. A band of enthusiasts joined him and a little revolution of their own was begun. They were all hanged upon the scaffold. The next Harrison descendant seemed to have inherited the independence of his grandfather, and for voicing his views against tyranny and treason was imprisoned for 6 years. Then came the first Benjamin Harrison, tall and corpulent—a big man both physically and intelectually—the friend and coworker of Jefferson, and Lee, and Henry. In 1764 he wrote the correspondence which welded the sister Colonies into a congressional unit and was chosen as a Virginia representative therein. It was he who introduced the original Lee resolution and it was he who reported the finally drafted Declaration. Never was there any doubt where Benjamin Harrison stood. He had talents to precise the right and firmness enough to pursue it. Upon his retirement he was three times elected Governor of Virginia. His son, William Henry Harrison, was the 9th President of the United States, and his great-grandson, Benjamin Harrison, the 23d President.

ROBERT MORRIS (1734–1806), PENNSYLVANIA

To speak of the Declaration of Independence is to recall the name of Robert Morris, the financier of the American Revolution. Washington won the war with his armies, but Morris saved the day with his money. At all times he was the sunshine behind the clouds of strife. No matter what the financial predicament, it was attended to and with satisfaction. Private interest possessed little influence over the mind of Robert Morris when it clashed with his high notions of liberty and freedom. Among the first to feel the encroachments of kingly power, he never wavered in his allegiance. He breasted every difficulty with daring and devotion, and though his life ended amidst disaster his memory cannot be lost. Born in England, he came to America early and became the head of an important banking house in Philadelphia. The account of this firm and his own personal fortune and what he could borrow from his friends were at all times at the disposal of his country. His credit never was shattered, but the end of his resources was many times reached in his desire to meet the pressing demands made upon him for funds for the Army. It is recorded that Washington made particular appeal for $50,000 a few days before the battle of Trenton. Unable to grant the request, Morris met a Quaker acquaintance who owned much property but who was not sympathetic to the cause. Observing from his look of depression that Morris was evidently in trouble, the passer-by inquired, "What's the matter, friend Robert?" "Washington is in need of $50,000 and you must furnish it," was the response. And he added, "I am at the end. Your security shall be my note and my honor." There was a moment's pause and then the encouraging reply, "Robert, thee shalt have it," and once more brightness illumined the day. And so the multiplied services of Morris are deeply engraved upon the tablets of all our hearts. He loved his country and gave to it all he had, in service, in fortune, and in life.

FRANCIS HOPKINSON (1737–91), NEW JERSEY

The character, intellectual attainments and patriotism of Francis Hopkinson won him the confidence of his countrymen in the most trying exigencies of their affairs. He had a well-earned reputation as a moral man and gentleman long before he entered Congress, and was, also, not without some conspicuity as a writer. The meager records do not indicate that he took any prominent part in the congressional proceedings, but they are clear that his mind was well stored with the grave and important knowledge necessary to the accomplishment of the act of freedom of which his name and signature are a part. Above all else he was a patriot and gave the best there was in him to his country and its cause.

WILLIAM WHIPPLE (1730–85), NEW HAMPSHIRE

Among all the nurseries of early society that of the sailor appeared least likely to qualify an individual for the duties of statesmanship. A knowledge of nevigation was all that was required in an educational way. The ocean was his home; the beauties of philosophy and the art of government were little known and deemed unnecessary of acquirement. Yet we find William Whipple the exception to the rule. Brought up a cabin boy on his father's boat, we see him with but one ambition in youth—to inscribe his name as commander of a ship's crew. Reaching this eminence, he was not satisfied. He became a patriot and later on forsook the water to be a general under Washington, and afterward varied his life by officiating as judge of the supreme court of his State. As a delegate to Congress he was one of the very first to lend aid to the movement for independence. Few men climbed the scale of society more rapidly or worthily, and the memory of none should be longer cherished than that of William Whipple.

GEORGE CLYMER (1739–1813), PENNSYLVANIA

The spirit of patriotism is never circumscribed in its operations. It honors and elevates its object no matter what his situation in society. This little booklet will show that the merchant abandoned his interests, the physician his practice, the shoemaker his last, the lawyer his profession, and the sailor his ship, so that their time and their talents might be devoted to the country's common interests. And so it was with George Clymer, who quit merchandising and joined the faithful band of heroes in Philadelphia. In his youth he ran a coffee house near where Independence Hall now stands. George Washington dropped in one day. Clymer did not know him, but showed him marked courtesy and service. A friendship developed that lasted until their death. Later Clymer acquired much wealth, which he gave freely to Washington during the worrisome financial times at Valley Forge. He died poor. The original Pennsylvania delegation to the Congress was not inclined to ratify the Declaration, and Clymer was one of those chosen to save the day. He signed the document but was not present when it was adopted. Immediately afterward his home was sacked and destroyed by an infuriated mob displeased with his action. He was also a signer of the Federal Constitution. He can truly be termed one of the fathers of this country.

JOHN PENN (1741–88), NORTH CAROLINA

John Penn affords a further illustration of the natural power of mind rising in triumph over the deficiencies of education and marching perseveringly toward honors and distinction. Penn was born poor and his education was sadly defective. Although the veil of oblivion is thrown over the particulars of his life and but little exists for the biogra-

pher, it is known he became a lawyer and soldier. He served his State faithfully in Congress, but after the war, when North Carolina refused to help maintain the Union with taxes, Penn resigned and declined to act further for his State.

JOHN MORTON (1724–77), PENNSYLVANIA

John Morton was among those primitive laborers in the vineyard of independence, the fruits of whose toil so gloriously ripened but of whom few memorials have descended to our time. No authentic portrait of him is in existence, the one shown being a copy made in later years from recollection and not from life. But little space is given to his name in history, yet the brevity of what has been written is replete with evidence of sterling patriotism and steadfast devotion. As Rodney left his sickbed to save the day for Delaware, so John Morton rode 40 miles on the night of July 3 to be on hand in the morning to break the Pennsylvania tie and vote that State for freedom and liberty. At first questioning the expediency of the Declaration, Morton was eventually won over by Franklin and Adams, and when it seemed determined that Pennsylvania might be recorded against ratification, his signature was given for approval. Long live the name of John Morton for that one act alone. Blamed by his Quaker friends at home he sent them this message: "I am proud of your criticism. It was the most glorious service I ever rendered my country." And on his deathbed his last words were: "It shall be acknowledged; it shall be acknowledged." Let it be acknowledged again here.

ROGER SHERMAN (1721–93), CONNECTICUT

Among the illustrious characters whose names are inscribed upon the brightest record that adorns the annals of our country few possessed more solid attainments than Rober Sherman. It is a remarkable fact that this man, who stood among the foremost in the ranks of patriots and statesmen and served his country in various high and honorable offices during a period of 40 years, began life as an apprentice to a shoemaker and pursued that occupation until after he was 22 years of age. Surmounting difficulties which to common minds might have been insuperable, he gradually ascended from his humble life to eminence among men. While he worked at his last he studied, and like Lincoln and Franklin succeeded by reason of industry, study, and frugality. Becoming a lawyer, his brilliancy as such soon promoted him to a State judgeship, and in 1774 he was sent to Congress. When Richard Henry Lee offered his famous resolution for independence, Sherman was named with Adams, Jefferson, Franklin, and Livingston to draft the glorious act. In the debate he displayed superior ability. Upon his retirement he became mayor of New Haven and first Senator from Connecticut. He was a member of the general convention to prepare the Federal Constitution. It need only be said that he served his country with fidelity and honor, and was a true, faithful, and firm patriot.

JOHN WITHERSPOON (1722–94), NEW JERSEY

No combination in the mind of man forms a more certain foundation for useful virtue than that of piety and patriotism. When love of country is guided by such principles, then the universe is safe. Among those who united the Gospel ministry with the labors of the patriot was John Witherspoon, no less distinguished in the church than in the record of his country. Born in Scotland, he came to the presidency of Princeton College in 1766. Casting aside his European prejudices he became an American the moment he landed on our shores, and no more enthusiastic American lived in that period. Always firm in the most gloomy aspects of public affairs, his formidable presence, his indomitable industry, and his intelligent foresight made him one of the most important advocates of freedom. A southern delegate, during the debate on the Declaration, was opposing ratification because "we are not ripe for revolution." Drawing himself up to his great height, John Witherspoon interrupted to say, "Not ripe, sir, we are not only ripe but rotting." It was Witherspoon who joined with Morris in making stable the finances of the country. His services were untiring, and his memory can perish only with the liberty of the Nation he so ardently strove to establish.

WILLIAM FLOYD (1734–1821), NEW YORK

Early in the Revolution William Floyd became conspicuous for the energy with which he championed the popular cause, and he remained a delegate in Congress for 8 years. He was a Long Island landowner and farmer, and suffered bitterly at the hands of the enemy because of his course in signing the Declaration. At one time his beautiful home was used as a cavalry barracks, his estate seized, and his family driven into captivity. For 7 years he never saw his property, and though offered its return if he would enroll against his country he became more active than ever in the pursuit of liberty and freedom for the people he loved and for the young Nation he was helping to start. The name of William Floyd will always be held in veneration so long as independence has a friend.

ROBERT TREAT PAINE (1731–1814), MASSACHUSETTS

In the character of the early Pilgrims there was much to approve and venerate. Never were men animated with a more ardent zeal for patriotic and religious freedom. Such was the attitude of Robert Treat Paine, who traced his ancestry to the Mayflower days. Boston gave him to his country. At an early age he became a lawyer. Long before he was called to act in Congress he was a firm believer in liberty and an earnest advocate of freedom. A stanch admirer of Washington, he was selected as the great general's chief cannon buyer during the entire Revolution, and was also largely instrumental in providing the Continentals with powder and ball. It may be said of him, as of all the noble 56, that he hazarded ease, property, and life to his country's cause, and never hesitated how to act.

BENJAMIN RUSH (1745–1813), PENNSYLVANIA

To his fame as another of the noble patriots who signed the immortal document, Benjamin Rush has added the distinction of being the foremost American surgeon of his day. He was born in poverty in 1745, his father dying when he was a boy. By prudent management and painstaking study he worked his way through Princeton and later studied medicine and surgery in Edinburgh, London, and Paris. At 25 years of age he was reckoned a physician and surgeon of international reputation, and the service he rendered gratuitously in saving the lives of more than 4,000 soldiers during a yellow-fever epidemic that threatened to wipe out Washington's army couples with the glory that is his as a signer. Dr. Rush was among the younger of the signers, being 31 years old when he subscribed his name.

JOSIAH BARTLETT (1729–95), NEW HAMPSHIRE

Josiah Barlett was the second signer of the Declaration. "My name shall be signed next," he said to Hancock, the Congress President. To Bartlett goes also the distinction of having been the first to vote "Yes" when the question came up as to whether the Declaration should be approved or condemned. The scant biography we have of the New Hampshire patriot says, in referring to his vote, "He made the rafters shake with the loudness of his approval." Bartlett was a physician and achieved early local fame by curing fever cases with cider. Other doctors accused him of malpractice, "but he stuck to his dose, and his cures quickly established him as a leader in his profession." So it was written in 1808. Dr. Bartlett was celebrated as a wit and by reason of his great height. Upon his retirement he became chief justice of New Hampshire and later Governor of the same State.

STEPHEN HOPKINS (1707–85), RHODE ISLAND

Of all the signatures to the Declaration, that of Stephen Hopkins shows the most sign of tremulousness. Yet to his glory, let it be said, the hand that wrote was afflicted with palsy and not with fear. A courageous spirit was willing if the flesh was weak. Hopkins was the first Abolitionist of his country. Long before the Revolution he expressed himself vigorously against slavery and carried his protests into the Halls of Congress. The more important cause of freedom for the Nation, however, offered him scant opportunity to force the question, and it was abandoned, to be resurrected by that other great patriot, Lincoln. Hopkins was chief justice of Rhode Island and Governor of the same State before he went to Congress. He was one of the fighting Quakers of his time, and was a zealous friend of his country.

MATTHEW THORNTON (1714–1803), NEW HAMPSHIRE

Above the grave of Matthew Thornton is a simple white slab bearing the modest but noble epitaph "Matthew Thornton, an honest man." And so we have another glorious reference to one of the distinguished heroes of the days of independence. Thornton was too busy with a military life to permit of his selection as a Member of Congress prior to the adoption of the Declaration. He was sent as a delegate on November 4, 1776, and immediately acceded to the great paper and signed it. He began life as a doctor, but took up warfare as a business, serving with much distinction. Later he was appointed to the supreme court of his State. He was invariably steadfast in favor of national freedom and at all times supported with his property and his life the Declaration to which he subscribed his name. Matthew Thornton deserved to the full the tribute "An honest man."

THOMAS LYNCH, JR. (1749–79), SOUTH CAROLINA

It was a close race between Thomas Lynch, Jr., and Edward Rutledge, both of the same State, as to who should have the distinction of being the youngest signer of the everlasting Declaration, and the honor goes to Rutledge. The latter was born in November 1749, and Lynch in August of the same year. Each was 27 years of age when he affixed his name. Lynch was a lawyer, and after serving in the Army succeeded his father in Congress. He was a chronic invalid at the time, but showed his patriotism by expressing the hope he would live long enough to sign. Providence granted his request, and soon afterward Lynch and his wife started on a short voyage for his health. They were never heard of afterward and it is assumed their lives were lost at sea. His earnestness, his eloquence, and his public character have been perpetuated to posterity as a pure and instructive model of true Americanism.

LYMAN HALL (1747–90), GEORGIA

At the age of 28, Lyman Hall was elected to the Continental Congress. Prior to that time he had been zealous and influential in promoting the Revolution. He was a doctor, and history records that with his physical cures went lectures on partiotism. He was another of the giants who signed, being 6 feet 4 inches in height. Sought by the enemy under Cornwallis, he was obliged to flee with his family into Virginia, but later returned to be elected Governor of Georgia. He was a gentleman of courage and an enthusiastic champion of religion, education, and freedom.

RICHARD STOCKTON (1730–81), NEW JERSEY

"An enemy of vice and a friend of virtue" is one of the brief eulogies bestowed upon Richard Stockton by the biographer of the

early days from whose writings most of the memoranda used in this little booklet have been secured. It might also be said of him that he was a generous and intrepid patriot and a Christian gentleman, who suffered much, sacrificed everything he had, and died. His high character and distinguished abilities made him one of the leading spirits in the sessions of the Continental Congress. Graduating in the first class of Princeton, Stockton became a lawyer, and in 1774 chief justice of New Jersey. Two years later he was sent to Congress, and soon after signing the Declaration was appointed on a committee to inspect the Army under Washington. While on this detail he stopped one night at his Princeton home. A messenger brought word that the enemy was approaching. Fleeing, he sought refuge at the dwelling of a friend a few miles away. There he was captured and dragged from his bed, carried away in his night clothes and thrown heartlessly into jail. His estate was plundered, his great library destroyed, and two paintings of himself and wife were ruthlessly bayoneted to show the animus of his oppressors. While imprisoned Stockton was treated with most unusual severity. Special proceedings in Congress resulted and a demand was made by Washington for Stockton's release and exchange. This was accomplished, but Stockton never recovered, his health being undermined by the hardships inflicted upon him. History may give more space to other of the Revolutionary heroes, but none deserved greater honor. Conscientious, upright, just and wise, Richard Stockton survives. His fair fame and his active and varied life have been a conspicuous mark for those who seek evidence of honored patriotism and sterling Americanism. His name will always attract the love and affection of his countrymen, and his example will ever wield over them a powerful influence.

THOMAS MC KEAN (1734–1817), DELAWARE

Representing Delaware in the Continental Congress, Thomas McKean was at the same time chief justice of Pennsylvania. He served both States and his country for the long term of 50 years and maintained the well-merited confidence of his associates. History deals peculiarly with McKean. It is said he was present, voted for and signed the immortal Declaration at the time of its passage, yet no record of this act shows on the journals of Congress, and the formal signature of McKean does not seem to have been inscribed until 1781. However there is no question as to where McKean stood. He was an advocate of "Stop talking and act," and was one of the best tried and firmest fellows of the Revolution. His State associates were Read and Rodney. With the latter seriously ill at home, Read split the State vote by at first disapproving of the Declaration. That the Colonies might be a unit, McKean brought Rodney from his sick bed and the two obliged Read to join with them. McKean was a trusted officer under Washington and after the war resided again in Pennsylvania, being Governor of that State. He was one of the most useful, able, and patriotic fathers of a mighty Republic.

LEWIS MORRIS (1726–98), NEW YORK

As Lewis Morris was about to lend his name to the document of freedom, word reached him that the enemy's army was at the gates of his Long Island home and that his property would be spared on his promise to withhold his vote for liberty. "There are plenty of homes but only one country," was Morris' reply, and he signed. Everything Morris possessed, property and fortune, was sacrificed, and his family was diven into exile. But Morris remained faithful and steadfast in his loyalty. While the Revolution was still on, he gave up his seat in Congress to his great brother, Gouverneur Morris, and became a general under Washington. He brought to his country the pride of genealogy and gave to it the glory of his fearless courage.

FRANCIS LIGHTFOOT LEE (1734–97), VIRGINIA

Francis lightfoot Lee differed from his more strenuous brother, Richard Henry Lee. The latter was all action, fire, and resolution. The former was one of the dandies of his day, much admired for his pleasure-loving ways, and content with the easy life of a country squire. Yet he was a fighter when the occasion required, and few surpassed him in depth of thought, strength of argument, and force of conclusion. Like his cousin, "Lighthorse Harry" Lee, he was a great favorite of Washington, and continued through life a steadfast friend and supporter of the great general. His part in Congress was more toward the cause of the army than toward any written declarations of freedom. It was his proud and justifiable boast, however, that he supported and signed the act of liberty and that he considered it more a deed of wisdom than of courage. He was a generous-hearted, much-beloved soldier of fortune.

OLIVER WOLCOTT (1726–97), CONNECTICUT

Of the Revolutional actors perhaps none had a broader acquaintance nor was more universally esteemed than Oliver Wolcott. Of inflexible integrity and stern resolution, he rose to the highest of militaryand civil honors, and long before the act of independence had been proposed he was outspoken in his protest against royal subjugation. The Revolution was recommended, commenced, conducted, and terminated under the auspices of men who enjoyed the public confidence during every vicissitude of fortune, and Wolcott shone glorious in this heaven. Returning to Connecticut, he entered the army under Washington and moved to New York. His popularity had preceded him, and within a year after he had take up his new residence he was chosen Governor of New York, filling that position until his death. Oliver Wolcott was another of America's tall men in a day when tall men were needed to meet conditions of stress.

CARTER BRAXTON (1736–97), VIRGINIA

Carter Braxton was the richest of all the signers, but he died in debt. Affluence came to Braxton through inheritance and he had the opportunity of rich youth to lead a life of dissipation and conviviality. But he formed a warm fondness for Patrick Henry and Jefferson, and at their suggestion entered the Virginia Assembly in 1761. The famous "Liberty or death" speech of Henry's quickened the patriotism of Braxton and he organized a local military company, determined to array himself and his little army against the enemy. The cool-headedness of Washington overcame his ardor, however, and he accepted a seat in Congress. There he was one of the most outspoken critics of kingly power. Soon after the Declaration had been approved he entered upon commercial life. His first move was to place his entire fortune in ships with which he hoped to engage in exporting and importing relations with France. History says the vessels were all captured or destroyed and Braxton found himself in poverty. His lands were seized by the sheriff, his slaves were sold, lawsuits galore were directed at him, and he became so involved in debt he died, a brokenhearted man. His life was a lesson of the uncertainty of all earthly things.

JAMES SMITH (1720–1806), PENNSYLVANIA

The plain and wholesome name of Smith also has its place in the catalog of great men who had the happiness and strength of purpose to affix their signatures to the glorious Declaration. James Smith was considered the most eccentric of all the signers. He was the wit of Congress, and carried to its serious proceedings the humor of his Irish ancestry. He was a lawyer and played an important role in the Pennsylvania conventions and conferences which prepared the way for that State's endorsement of the document of freedom. Although not chosen a delegate until after the Declaration had been passed, he signed it with fervor the day he took his seat.

ARTHUR MIDDLETON (1742–87), SOUTH CAROLINA

Impartiality may require admission that the signers of the Declaration had, in some respects, their equals. But justice compels the assertion they had no superiors in zeal and devotion. Such were Arthur Middleton and his father, Henry Middleton. The latter represented South Carolina ahead of the son and rendered excellent service in the preliminary work of organization and preparation. But important local governmental affairs obliged him to return to his native State just prior to the ratification. His son, Arthur, succeeded him, reaching Philadelphia in time to give his vote and his name to immortality. To the enemy the offense was heinous, and, in common with all the patriots, the penalty was paid. The Middleton estates, the finest in South Carolina, were utterly destroyed by Cornwallis' men, and scores of old Flemish and Italian paintings were cast into a heap and burned. Young Middleton himself, a year later, was arrested and thrown into jail. After the war he was returned to Congress. He became a writer of national fame. The wreck of property and fortune never lessened his ardor or enthusiasm.

SAMUEL HUNTINGTON (1732–96), CONNECTICUT

Samuel Huntington is another of the phalanx of patriots who rose from the humble walks of life, and by the vigor of their intellect and unwearied perseverance compensated the deficiencies of early education and enrolled themselves with honor and capacity among the champions of Colonial freedom. He began life a poor farmer's boy who worked up and on through Yale and a lawyer's office into prominence in his profession. Pious Christian, and at one time a professor of religion, he was one of the early few to sign the Declaration and upon Hancock's retirement became president of Congress for 2 years, later serving as Chief Justice of Connecticut and Governor of that State. Such, briefly, was Samuel Huntington, the friend of man and liberty.

JOHN HART (1708–80), NEW JERSEY

One of the Revolutionary patriots who voluntarily incurred the greatest degree of suffering without any possibility of individual gain was John Hart. He was a farmer, known throughout his State as "Honest John Hart." He served with distinction in the pre-Revolutionary legislatures of New Jersey, and in 1765 was one of the first to recognize the tyrannical character of the iniquitous Stamp Act. During the enemy invasion of New Jersey, Hart was besieged in his farmhouse. His wife lay dying at the time, and he refused to leave her. After her death he managed to make his escape, and for a year was hunted through the woods, where he existed as a common exile and fugitive, eluding every effort of his pursuers. An old man at the time, he never lost his spirit, and joined Washington's army as a private after the battle of Princeton.

GEORGE ROSS (1730–79), PENNSYLVANIA

When Governor Penn, of Pennsylvania, in 1775, saw how warmly the sister Colonies were facing independence, he addressed a letter to his legislature urging it to conclude that the time was not propitious to engage in strife with the mother country. The message did not appeal to George Ross, one of the lawmakers, and he couched this brief reply: "We are sincerely obliged to Your Honor for your attention to the true interests of the people over whom you preside, and would assure you that we shall always pursue such measures as shall appear necessary to secure the liberty and independence of

America." Penn never forgave Ross, and for a time was instrumental in keeping him out of Congress. After the Declaration had been ratified, however, Ross was elected a delegate and signed the illustrious paper for his constituency. He was the last Pennsylvania man to sign. He was a lawyer and jurist, and well deserved the confidence that was bestowed upon him.

FRANCIS LEWIS (1713–1803), NEW YORK

In 1765 an association called the Sons of Liberty was formed, with the determination to resist force by force. One of its founders was Francis Lewis, who at that time retired from business to give his whole attention to the furtherance of this patriotic organization. A native of England, he had served with faithful loyalty in the army of his king, and in the French-Canadian war of 1753–56 had especially distinguished himself on the northern frontier. Taxation without representation aroused his ire, however, and over night he changed from a subject of the crown to a leader in the Revolution. His firmness and integrity marked him as a fit representative in Congress. While there his Long Island home was rifled by the enemy, his books and papers were destroyed, and his family was obliged to flee. His wife was soon after captured and imprisoned in a filthy barrack for months. She refused a release contingent on her husband's quitting the Revolution, and remained a prisoner until General Washington appealed for her liberation because of her failing health. Two years later her life fell a sacrifice to this act of vandalism. It might, therefore, be said that in addition to his property Lewis lost his wife in the cause of freedom. The veteran statesman and patriot of today may well look with mingled emotions of rivalry and admiration upon the name of Francis Lewis.

GEORGE TAYLOR (1716–81), PENNSYLVANIA

George Taylor came to America almost as a slave under bond and apprenticeship to a Pennsylvania iron merchant who had paid his passage over. He landed in New York with three English pennies. In 20 years he was a partner in the business to which he had been apprenticed and afterward acquired full ownership through his marraige to the widow of his former employer. His life was rich not only in memory but in kindly service.

WILLIAM HOOPER (1742–90), NORTH CAROLINA

New England added to its army of patriots by furnishing William Hooper, although he was credited as a delegate from the South. Hooper was born in Boston, and after graduating at Harvard became a law student with that grand Revolutionary statesman, James Otis. Inspired by Otis' firm Americanism and thrilled by his eloquence, Hooper took his advice and carried the gospel of freedom into North Carolina, opening a law office in Wilmington and at once identifiling himself with the politics of his new State. In 1774 he was sent to Congress, and while no particular reference can be found relative to the part he played, it is an accepted fact that he was always on the side of independence. His enthusiasm never abated and he maintained with intrepidity the ground he had assumed.

GEORGE WYTHE (1726–1806), VIRGINIA

The name of George Wythe is another of the Colonial patriots so conjoined with his associates as to admit of very little distinct or particular detail. It is known that he was born poor, that his early education was defective, but that he struggled against adversity and became a prominent lawyer of his State. Perhaps his first acquaintance with political life came through a close association with Patrick Henry and Thomas Jefferson. He was their disciple, their pupil, and joined with each in opposing strenuously the iniquitous stamp tax of pre-Revolutionary days. He sacrificed a small fortune during the war, and was hunted like a wild animal after he had given his name to the Declaration. However, he survived the efforts made to capture him, and returned to Congress in time to take a part in drafting the Federal Constitution and in signing it. No man left behind him a character more venerated than George Wythe, and no man was more devoted to liberty and the natural and equal rights of others.

RICHARD HENRY LEE (1732–1794), VIRGINIA

But few of the signers shone with greater brightness or have left a more desirable name than Richard Henry Lee. One of the famous "Lees of Virginia," his just pride of ancestry did not lessen his ardor or his patriotism. He and his four brothers were all enthusiasts in the Revolutionary struggle and each looked upon Richard Henry as the personification of wisdom and strength. While in the Virginia House of Burgesses, Lee stood with Patrick Henry in his advocacy of freedom. All of his personal fortune went into the coffers of his country, and in addition "he raised nearly one millon dollars through note endorsement." In Congress his spirit was ruffled by the waste of words. "Why do we argue? Why do we delay?" he asked, and the next day he put an end to the debate by introducing the famous Lee resolution, declaring the Colonies to be "free and independent States." As the introducer, he would have been chosen to draft the Declaration, but sudden illness at home called him away. Jefferson received the honor in his stead. Lee returned to Congress in time to sign the following September. He was a fearless, fervid, eloquent patriot.

JAMES WILSON (1742–1798), PENNSYYLVANIA

On the immortal second of July, 1776, the vote of Pennsylvania was recorded against the Declaration. The delegation from the Keystone State was made up of James Wilson, Benjamin Franklin, Robert Morris, Charles Humphreys, John Dickinson, Thomas Willing, and John Morton. The report was postponed until July fourth. It was a rainy day, and Morris and Dickinson were absent; some say the former, who was an enthusiast, had detained the latter, who was always timid and hesitating. Be that as it may, Wilson, Franklin, and Morton voted affirmatively and Humphreys and Willing, to their shame, in the negative. The day was saved, and Pennsylvania ratified. James Wilson was selected for this purpose. Studying law in the office of the very Dickinson with whom he was associated to his honor on the Pennsylvania delegation, Wilson early marked himself an opponent of tyranny and an advocate of liberty. His name slandered and his life threatened for the act that gave him immortality, he was honored in later life by being raised to the United States Supreme Court. He helped draft the Federal Constitution.

ELBRIDGE GERRY (1744–1814), MASSACHUSETTS

"It is the duty of every citizen, though he may have but 1 day to live, to devote that day to the service of his country." So spoke Elbridge Gerry as he signed the Declaration of Independence in September, 1776. It was the occasion about which he spoke, but the records indicate that from his youth Gerry devoted every day to the land of his birth and love. A graduate of Harvard, he early became one of the zealous political leaders of of his State. When Samuel Adams proposed a committee to enter protest against the occupancy of Boston by General Gage, Gerry was chosen as its head. When John Adams formed his celebrated committee to carry this protest further, Gerry was again picked. And when the enemy made its early morning march toward Lexington and Concord, in April, 1775, it was Gerry, hidden as he had been in a tavern on the way, who waited until the last minute before he fled to carry the tidings of the approach of war to the surrounding neighborhood. And, again, the night before the battle of Bunker Hill, Gerry occupied the same bed with General Joseph Warren. "Give them plenty of ball, doctor," he said in the morning, as Warren went off to his command and death. Gerry did not reach Congress in time to sign the Declaration with the others, but he did get there in time to be appointed with Robert Morris as a committee on finances. In 1787 he refused to vote for or sign the Federal Constitution, and tested his action later by running for Governor of his State. He was elected, and was afterward made Vice President of the United States. Gerry had a sacred regard for the firm establishment of his country and was a patriot above all else.

THOMAS NELSON, JR. (1738–89), VIRGINIA

Another of the southerners possessing great wealth was Thomas Nelson, Jr. To his honor let it be noticed that he gave his entire fortune to his country when its need became urgent, and died penniless. At one time the issuance of a $2-million loan was necessary to repel the enemy from Virginia soil. This full amount Nelson raised over night by mortgaging his estates. The next day his own home was occupied by the personal staff of Cornwallis. It was at Yorktown, and the Revolutionary forces were on the offensive. Nelson, who was Governor at the time, visited the firing line. Nothing that the entire neighborhood was being razed by the artillery, he inquired why it was the fire was not directed at his own dwelling. "We are sparing it out of respect to you, Governor," replied one of the young Lees. "Give me the cannon," retorted Nelson. "Do this," he added, and he fired a ball through the house. Subsequent shots destroyed the place and forced the enemy to flee. And so it was always with Nelson—America first.

JOSEPH HEWES (1730–79), NORTH CAROLINA

Joseph Hewes was a signer who discarded his religion to give his voice and signature to his country. Born a member of the Society of Friends, he was steadfast in his religious devotions until it became apparent to him that he must sever these or be less loyal to the cause of freedom. Urged by his church to relinquish his seat in Congress he refused, and became instead a warm and enthusiastic patriot. At first he was opposed to ratification in the form the original resolution was introduced, but after listening to a speech of Samuel Adams he is said to have "started suddenly, and lifting both hands to heaven as if in a trance, exclaimed 'It is done, and I abide'." He died at the height of his usefulness, but not before he had earned the enduring and grateful recognition of the country he served.

ABRAHAM CLARK (1726–94), NEW JERSEY

"Firm and decided as a patriot, zealous and faithful as a friend to the public, he loved his country, and adhered to her cause in the darkest hours of her struggle against oppression." Such is the inscription above the Rahway churchyard grave of Abraham Clark. It presents a concise view of the character of this New Jersey hero. Unambitious of wealth, this sterling old Revolutionary chiftain early acquired local fame as "the poor man's lawyer." It is said of him that "he persistently refused fees for his services, and when fees were offered seemed more inclined to accept produce or merchandise." Starting his political life as the sheriff of Newark, Clark soon was distinguished for official assiduity. When war began to agitate the land he had passed the meridian of life. It was, therefore, under a well settled and mature conviction of the justice of independence that he devoted his remaining years to his country's servie. Two of Clark's sons were captured and locked up. They were treated with the utmost severity. Their father scrupulously refrained from interfering in their behalf, as he felt any movement for them meant a lessening of his influence for his country.

Clark met the test as only a true patriot should.

WILLIAM WILLIAMS (1731–1811), CONNECTICUT

William Williams has been referred to as the tallest signer of the Declaration. His ardent patriotism and his outspoken approval of every move for liberty and justice add to his distinction in the gallery of immortals of which he was a member. First a soldier, then a lawyer, then a judge, and next a merchant, he was taken from these spheres and carried into the Congressional halls, where he at once made his presence felt. One of the Pennsylvania members who had not signed the document bragged of that fact to Williams, who sternly replied, "Then, sir, you ought to be hanged for not doing your duty." Williams did his duty at all times and against all hazards.

GEORGE READ (1733–98), DELAWARE

George Read was a fearless patriot and an able man. Almost alone he openly and vigorously opposed the adoption of the Declaration, maintaining that the time had not come for such action, and when the vote was first secretly taken his was recorded in the negative. Later he changed his mind, became one of the most strenuous advocates of independence and affixed his signature. Samuel Adams laughingly informed him he had signed with a halter about his neck, and Read, who was of serious mien, replied, "So be it; I am prepared to meet all consequences of this just act." Pleased with his course he subsequently introduced this resolution: *Resolved*, That any one who shall wilfully break this agreement shall have his name published in the Public Newspapers as a betrayer of the civil rights of America and forever after be deemed infamous and a traitor." During the war Read's home was confiscated by the enemy, his wife taken captive and he driven from place to place for 6 years. Later he became Chief Justice of Delaware and that State's first United States Senator.

WILLIAM ELLERY (1727–1820), RHODE ISLAND

The mind of William Ellery kept pace with the world. He was a lawyer who had graduated from Harvard, and while in Congress served in a conspicuous way on many important committees. The fine bold signature he placed on the Declaration is somewhat in contrast to the handwriting of a few of his more anxious colleagues. He spoke of this great event as one "which many regarded with awe, some with uncertainty, but none with fear," and added, "I watched every one sign, as I was determined to see how they looked as they gave their names to what might be their death warrant. There was undaunted resolution in every countenance." Ellery returned to his home to find it destroyed and his personal treasures stolen. He died when 93.

Excerpts From Address by Hon. Alexander Wiley, of Wisconsin, Before Order of Ahepa

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. WILEY. Mr. President, last Sunday night it was my privilege to address one of the outstanding groups of my State and of the Nation. I refer to the Order of Ahepa.

It was a great joy to meet with these patriotic Americans. I am grateful to them for a wonderful evening, and, in particular, for their gracious expressions of personal commendation and support.

My subject was, of course, Greek-American relations and the need for constant improvement of them. We of the United States have always had the warmest affection for Greece, and it is my hope that by this address I may have, perhaps, contributed in some small part to further improvement in our relations.

I ask unanimous consent that excerpts from the address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES UNITED STATES TO CONTINUE TO SEEK JUST SOLUTION ON CYPRUS; ISSUES NEW WARNING AGAINST SOVIET TRICKERY IN ITS OFFERS TO GREECE AND OTHER LANDS

(Excerpts from address by Senator WILEY at Order of AHEPA district meeting, Racine, Wis., July 15, 1956.)

I always feel very happy and honored to be the guest of your great organization, the AHEPA, and especially on the occasion of this district convention.

The American Hellanic & International Progressive Association has proved to be one of our most vital national groups. It is unique in not only serving the major interests of Greek-American relations but in promoting a more abundant life for all and the preservation of our dearly prized freedom.

It is a well-known fact that the Order of AHEPA has provided and continues to provide outstanding services to our fine citizens of Greek extraction—folks who make up the membership of the more than 350 devout Greek Orthodox communities throughout the United States.

From AHEPA's ranks has come expanded leadership, and into its ranks have come the flower of Greek-American talent.

Uppermost among them is, of course, the issue of democracy and true self-determination on embattled Cyprus. Yes, an end to the tragic bloodshed on that island, including, of course, the earliest possible return of exiled Archbishop Makarios to his people.

I feel that I speak the sentiments of all America when I say that we are deeply saddened by what has transpired on Cyprus.

TRADITION OF NONMEDDLING, BUT TRADITION OF SPEAKING OUR CONSCIENCE

Now, as you know, we Americans are not meddlers. We don't like to take any action which could be construed as interference in other people's affairs, whether in Great Britain's affairs, Greece's, Turkey's, or anybody else's affairs.

At the same time, wholly consistent with our tradition of noninterference and nonmeddling, there is another tradition.

It is the tradition tha America will no be silent, America will not shirk and be motionless, when injustice is done before her eyes and the world's eyes. The conscience of America is too keen, the humanitarianism of our people too deep for us to fail to try to lend our good offices to end injustice and discord. We are glad to do so, particularly when we might be of help to solve a dispute which is not between enemies, which is not between an enemy and a friend, but rather between friend and friend, as between Great Britain and Greece today.

NO BASE CAN BE HELD AGAINST PEOPLE'S WILL

We cannot fail to note to our British friends that the whole history of the 20th century confirm this fact: No base is really much good, unless it is surrounded by native people friendly to the maintenance of that base.

No interior or port area can be successfully held or successfully used unless the local population is, by and large, agreeable. If it is not agreeable, then acts of sabotage may occur, transportation and communications may be cut and all the other tragic complex of guerrilla warfare may occur.

To us, the thought of Cypriot children—young boys and girls—fighting against British Tommies, or for that matter any other Cypriot citizen doing so, is distasteful. But it is distasteful not only to us but, we know, to the Tommies themselves and to the people of the United Kingdom, as well.

When we think of England, we think of her magnificent tradition of freedom and liberty. We recall how, in our own colonial times, the conscience of Britain spoke from within the Parliament of Britain itself in the cause of American colonists' freedom.

We have a high respect today, as well, for the British Government and for the British people.

Surely, from British statesmanship and yes, from Greek and Turkish statesmanship can come a solution to this problem—a solution compatible with the interests of the United Kingdom, of Greece, and Turkey. It must be a solution fully compatible with the crucial strategic needs of NATO, and of the Balkan Pact, as well.

Surely, we should be able to see living vitality put back into NATO and put back into the Balkan Pact, by having this dispute among friends settled.

Without meddling, therefore, without interference, we shall speak our conscience on this matter.

And tonight, I shall refer to other problems as well: To Greece's stalwart tradition against communism—including its latest crafty forms; to Greece's emigration problem and her economic problem.

I have, as you know, enjoyed talking both with the distinguished King and Queen of Greece, and I know from first-hand experience what a warm regard the Greek Government and the Greek people have for our own land.

CONTRIBUTIONS BY AMERICANS OF GREEK ANCESTRY

This genuine mutual affection is certainly understandable. And it is a real "light," worthy of being followed, as a wonderful symbol.

From the earliest days of their arrival here, Americans of Greek descent in this country rapidly became an integral part of our Nation. In war and in peace they have done much to bolster the American way of life. Over the past century, we have seen Greek immigrants emerge—basically from humblest origins, as a group of people who proved the heights to which free men and women can rise, as did your noble forebearers of the golden ages.

Today, some of our most prominent business, professional, and civic leaders in public life are of Hellenic origin. We in Wisconsin are particularly proud of our fellow-citizens of Greek ancestry and of your many fine contributions to our State and Nation.

THE LEGACY OF GREECE

Of course, the influence of ancient and modern Greece on our civilization and life, can hardly be overestimated. There is perhaps no other country that has left to future generations as many legacies as she.

Our religion, philosophy, science, literature, education, and politics—indeed, every phase of our institutional life—all have their roots in Greek culture and tradition.

Above all, as the "cradle of democracy," Greece taught her lessons of democratic government to the world. While forms and methods have changed to fit the times and needs, the basic principles of liberty, freedom, and individual dignity remain forever the core of our way of life.

No one can stand on the Acropolis, as I have, and as you no doubt have, without a feeling of awe and reverence and yes, eternal gratitude for "the glory that was Greece."

UNITED STATES TIES WITH GREECE

The bonds between the United States and Greece have been ever strong. Her people, as ours, have always remained devoted to democratic principles. And it was, of course, in this country that Greek political forms were applied to their peak and that real government of, by, and for the people reached its greatest triumph.

Because of our common heritage then, it was not unusual that, as far back as 1821—the beginning of the Greek struggle for independence—the United States became one of Greece's staunchest supporters. Daniel Webster and Henry Clay, greatest figures in the Congress, spoke eloquently on behalf of the Greek cause. President Monroe, in a message to Congress, paid special tribute to the revolutionaries.

Our own young country naturally felt warm ties of sympathy with the Greek patriots seeking freedom, just as we ourselves had achieved it a short time before—with blood and sacrifice.

GREECE'S LATEST TRAVAIL: NATURE'S RAVAGE

Unfortunately, Greece, over the centuries, has known many dreadful times. The present moment is not a happy one from several standpoints.

This week we were deeply saddened to observe how the fury of the elements had once again ravaged the land of your fathers. Earthquakes, volcanic outbreaks, and tidal waves have as we all know, rocked the Aegean Sea, causing death and destruction on a dozen of the Greek Islands.

Our sympathy goes out to the injured and homeless in these areas. But sympathy is not enough. Quick action is and was imperative to treat the injured, house and feed the homeless, and help the stricken repair the damages to home and property.

American relief experts are now surveying the disaster scene. The American Government and International Red Cross, among other agencies, will take whatever measures may be asked for so as to help bring relief. Greece, is as you know, relying basically on itself to meet this tragedy.

But it is in tragedies of this kind that the brotherhood of man rises above all political friction. Thus, the Greek people do not stand alone in their grief.

GREECE'S SUFFERING AT THE HANDS OF THE INVADER

The Greek people have also suffered much under the iron hand of alien tyranny. Since their independence from Turkey, they have faced three particularly formidable alien assaults.

Twice their territory has been invaded in brutal, outright aggression. And more recently, we have seen Greek freedom endangered by the now hard—now soft, zig-zag tactics of Kremlin treachery.

Greece has stood up grandly to the task of meeting each of these adversities, but not without suffering a heavy toll in human lives and property.

Against the Communist onslaught in particular, we saw how bravely Greece fought to preserve her independnce. We were glad to do what we could to provide this brave land (with its meager physical resources) to provide it with military and economic assistance to hurl back the Red foes—from within and from without.

OUR AID PROGRAM SAVED OUR STRATEGIC INTEREST

The world will not soon forget Greece's triumph over communism, a triumph achieved by the gallantry of her own forces in the true Evzone tradition. Nor will the world forget that it was America's enlightened program—a bipartisan program, of aid, administered by our great Gen. James Van Fleet—which enabled Greek valor to prevail.

Today, we bear occasional criticisms—unwarranted abuse—of the United States aid program from people who tend to forget the past. They tend to forget that it was the free world's own strategic interest which was saved by our enabling Greek courage to smash the Red enemy. The whole history of the crucial Mediterranean and of the Middle East would have been altered for the worst had Greece been permitted to perish under the Red attack.

The money we spent in Greece was repaid to us manyfold by the preservation of Greece's independence.

LATEST SLY SOVIET OVERTURES

Today, Greece continues here efforts against Communism—from without and from within. She remembers full well the tragic plight of the some 28,000 Greek children and 3,000 Greek soldiers carried behind the Iron Curtain 9 years ago, and not heard from since.

She still finds the Communist craftily maneuvering for advantage in her political life. But increased economic and political stability within the country will serve to reduce this threat.

Of course, the Kremlin is, as usual, trying to exploit the current Cyprus dispute to Moscow's own advantage. Pravda within the past few weeks offered new technical and economic assistance to Greece, just a week after the visit of Soviet Foreign Minister Dmitri T. Shepilov. However, neither the King or Queen, nor Premier Karamanlis, nor his Government and people, are naive or unsuspecting, in the face of Soviet cunning.

Greece has firmly confirmed her steadfast stand with the West.

As one of our most resolute allies in the free world resistance to Communist aggression, Greece has rightly come to be one of the most trusted members of NATO. She has accepted the full responsibilities of her membership in the organization. This has been proved on many occasions, notably her contribution to the Korean war effort.

Greece knows well, from experience, her strategic importance in the Atlantic-Mediterranean community and she knows her vulnerable position in the gateway to the Middle East. She will not be found wanting when the free world calls upon her.

But she asks: Will the free world fail her over the all-important Cyprus issue?

It must not. Surely, the voice of reason will prevail among the three NATO allies, surely the voice of patience and understanding and reasonable compromise.

As I indicated at the outset, this is a time for statesmanship on the part of all concerned—not for blind extremism, not for unyielding harshness and inflexibility, but for the spirit which Athens itself demonstrated in the golden times—the spirt of enlightenment and belief in the supremacy of intelligence in conquering any problem.

The needs are plain: a mighty base for the free world must obviously be maintained on Cyprus, with a population around it that supports it enthusiastically.

The United Kingdom's interest, Turkey's interest in an area but 40 miles from her shores and an area with people one-fifth of Turkish origin must be carefully reconciled with Greece's natural interest—in a land and a people which is Greek in its very essence.

Self-rule for Cyprus, security for the West, assurances for Britain, Greece, and Turkey—these are not incompatible objectives.

And so, we hope and pray for a just solution and soon.

JUSTICE FOR OUR YOUNGSTERS

But justice is an ideal for which we should strive—not simply in foreign parts but in our own land as well.

I refer to justice for young and old; justice in meeting a domestic problem such as that posed by our own often wayward youngsters.

As many of you know, I am privileged to serve as ranking member of the Senate Judiciary Committee, in addition to being a member of its Juvenile Delinquency Subcommittee.

BISHOP EZEKIEL'S SPLENDID TESTIMONY

I am pleased therefore, to acknowledge the fine contribution made to our subcommittee, particularly by Bishop Ezekiel of the Greek Othodox diocese of Chicago, in his testimony before us. His comments on behalf of spiritual rededication struck a respondent chord in our hearts, and I was happy to compliment him on his presentation.

MY WORK ON BEHALF OF RELIGIOUS DESIGNATION BILL

I mentioned at the hearing incidentally, that I had been pleased to work on behalf of an important bill, since enacted.

By this legislation, Greek Americans of the Orthodox faith as well as other groups of the Eastern Orthodox faith, can designate their religious preference in the Armed Forces, a privilege previously denied members of our armed services of your faith.

This measure was long overdue. For surely, freedom of religion in every manner and form is one of our most sacred constitutional rights.

Two of our able staff experts, I might mention, on the Juvenile Delinquency Subcommittee itself are themselves of Greek Orthodox faith. And I am pleased to recognize their fine work.

It was only natural, of course, that among the outstanding civic groups invited to testify before the subcommittee was the Order of AHEPA, Supreme Gov. Louis G. Manesiotis added significantly to our understanding. He reported at our hearing in Pittsburgh on the background of AHEPA's interest:

"The Order of AHEPA at its national convention in August of 1954 held here in the city of Pittsburgh, upon learning of your program to coordinate the efforts of service groups throughout the country, unanimously approved the resolution endorsing this most worth while project. We again reaffirmed this resolution at our San Francisco conclave last August, and pledged all our facilities and resources in promoting this important program."

That pledge is being faithfully fulfilled.

LIBERALIZING UNITED STATES IMMIGRATION LAW

In the few minutes remaining to me, I should like to refer to the need for fulfilling a further pledge, on all our parts. It is in the field of liberalized immigration law.

Your Refugee Relief Committee is continuously working to remedy the unfair immigration quota still set on Greek aliens. As you know, the present quota set at 308 per year is grossly discriminating. This is only one two-hundredth of the quota of several other countries in Europe.

Certainly this rate is completely incompatible with the American concept of justice and fair dealing for our fellow man. And so, quick consideration in the closing days of Congress' session must be given to immigration reforms, including increasing the number of refugees coming to America from Greece, as well as abolishing the mortgaging of future quotas.

As you probably know, a measure has just recently been introduced by Senator CAPEHART, of Indiana, to provide additional visas for certain aliens of Greek ethnic origin living in Greece. S. 4088, which amends the Refugee Relief Act of 1953, is still pending before the Senate Judiciary Committee of which I am a member. Needless to say, I will urge its sympathetic review as soon as possible.

ECONOMIC JUSTICE FOR GREECE

I shall continue to urge, as well, efforts toward economic justice for Greece and other free nations.

We are naturally interested in maintaining the most fruitful trade agreements, under which Greek and American commerce may benefit. Greek prosperity in large part depends on the availability of markets for her export produce. How can a small country, drained through repeated wars (not of her choosing) and sudden catastrophes, expect to get back on her feet if she is faced with unwarranted quotas and restrictions on her exports?

This is especially serious for Greece which is so heavily dependent on a relatively few major products.

Likewise, we will give continued attention to our economic and technical assistance programs in Greece. Our interest is, of course, not only in the needed building up of the capital structure of the Greek economy—long-range engineering projects and the like, but the uplifting of the living standards of the average Greek and his family—living standards which are still unfortunately low, despite the recovery progress that has been made.

These are just a few of the questions which Congress must look into carefully. Too often, in weighing the general issues of immigration, foreign trade, and assistance we might otherwise tend to forget our debt to democratic nations of the world. And what greater debt do we owe than to the real "cradle of democracy?"

CONCLUSION

It is in this spirit that I should like to conclude my remarks.

I want you to know what a great privilege it has been to be with you tonight.

Had time permitted, I would have liked to have commented upon certain other phases of Greek-American relations which well command our interest.

I am interested, for example, in the ever-expanded program of exchange of Greek and American leaders. Why? So that we may benefit from the informative presence here of representative Greek leaders from all walks of Greek life, and so that Greece, in turn, may benefit from their having visited our shores and learned from us.

And there are other phases which I would like to have commented upon as well—phases which I have been pleased to discuss on many pleasant occasions with Greece's able Ambassador to the United States, His Excellency, George V. Melas—a most eloquent spokesman, not simply for his country, but for the free world.

With these thoughts, therefore, I conclude. But you, in turn, will not conclude your own constructive work here in Racine and throughout this district—your work on behalf of ever-improved Greek-American relations and on behalf of a brighter future for ourselves, for our children, and for those who will follow after them.

The Anti-Italian McCarran Act

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. MAGNUSON. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "The Anti-Italian McCarran Act," written by John J. Navone, S. J., and published in the Catholic World for July 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ANTI-ITALIAN MCCARRAN ACT

(By John J. Navone, S. J.)

"Italy's greatest export? Why bambini, of course." This humorous reply once greeted the question of my American tourist friend in Italy. However, to hundreds of thousands of unemployed Italians, overpopulation is far from funny.

Why emigrate? A friend's description of his train ride from Bologna to Rome gives the answer: "When dawn broke, we were 3 hours north of Rome, around Arezzo. More forbidding country you have never seen, though they tell me it does exist in southern Italy and Spain. Everything you lay your eyes on is poor, the people, the hovels, the livestock, the farms—if you can call them such. Even the earth seems tired of existing. How those people manage to eke out an existence from the wornout soil between the rocks is a mystery. Every hilltop is crowned with ancient decrepit towns. Poverty is embedded everywhere and hope seems a long way off."

My Florentine cousin's story was the same. Last December, when three civil-service positions were open in Florence, 5,000 applicants queued up for the civil-service exams. Thousands of Italian youth seriously overcrowd the universities, pursuing an academic life for years, merely to keep off the streets.

The effects are obvious. The intense Italian affection for the home and family, though still strong, shows signs of decrease. From the results of an inquiry conducted among thousands of Italian women by Prof. Luzzato Fegiz of the Doxa Institute, Milan, one can see this decline in the religious and social structure of the family. Among the causes mentioned are infidelity, lack of moral preparation for marriage, and birth control. The present birthrate is lower than before the war. In 1936, the birthrate was about 23.3 per 1,000 population and today it is near 17.6.

Realta Sociale D'Oggi, publishing the results of a recent parliamentary inquest, revealed that an average of 35 percent of the lower classes attend Sunday Mass, whereas 60 percent of the middle and upper classes regularly attend. These facts graphically corroborate the papal pronouncement that men must be able to live as men before they can be expected to live as Christians.

While people in the United States are encouraged by the bright side of the Italian situation—the agrarian reform in southern Italy—they must not fail to consider the large pools of unemployment which are still everywhere in southern Italy. There are many areas untouched by the agrarian reforms. But the extension of the agrarian reform and the new industrial development will not solve Italy's overpopulation problems. People will refer to the 300 families who have received parcels of land, and to those employed in new industries; but what of the 2,000 people in a town of 15,000 for whom there is no employment, and the 2,000 who are employed less than 6 months a year?

Italians are very sensitive to the situation. Argentina, Australia, Canada, Brazil, and Venezuela have generously assisted them in providing outlets for the surplus population, but the United States has called for a closing of applications for visas under the Refugee Relief Act. Emigration is still a necessity for the southern Italian economy.

All these social and economic troubles, added up, are grist for the political mills of both Communists and Fascists. The Fascist leaders Marsanich and Borghese, encouraging the discontent, urged Italians to vote both anti-Communist and anti-Christian Democrat by electing Fascists to office in the Italian national elections last May. Colonies for Italy stood high on the list of Fascist demands. As their price for cooperating with the United States and its allies in a defensive alliance against Russia, they demanded the return of Italy's African colonies. To landless or unemployed Italians, the idea of getting their own farms in Africa still has a real appeal. This appeal would be negated by a more positive American immigration policy.

It should not be forgotten that in the last national elections (1952) the Fascists and their monarchist cronies made the largest gains of any coalition, captured Naples (Italy's third city), Bari, Foggia, Salerno, 12 out of 31 southern provincial councils and 21 percent of the total southern Italian vote—and emerged as the third party in Italy.

They had picked up votes from the disillusioned and impatient who abound in Italy's uneven economy. To these unhappy Italians they sold nostalgia, a promise to resurrect the old days when Italy strutted before the world as a first-class power, when decisions were made for, not by, the people, and when the Duce took care of everyone. Most important of all, the M. S. I. won backing from among the same group that financed Mussolini's rise—rich landowners and industrialists who fear even the mild Christian Democrat reforms and want insurance against change.

The American policy of discriminatory immigration laws is always capitalized on by the leftist parties. If a free or liberal immigration policy were pursued by the United States the economic pressures caused by overpopulation and unemployment would be greatly ameliorated and consequently the Communists would lose much of their support. These problems are far too great for Italy alone to solve.

The Italian Government has done its utmost to relieve the overpopulation-unemployment problem by entering into bilateral agreements with Latin American countries. Many Italians have emigrated under "controlled emigration" schemes planned and financially supported by the Italian Government. Yet, despite Italy's best efforts, the problem persists, for those who are the most poverty stricken cannot emigrate because of their inability to pay the transportation costs. Consequently, the poor are always with her.

Redtape also prevents much Italian emigration. Formalities which must be settled before embarkation are often too expensive for any but the well-to-do. Italian villagers must appear before officials whose offices are at great distances. The result is tragic. Because of the villager's inexperience with the complexities of modern bureaucracy, he frequently falls prey to unscrupulous adventurers or abandons the attempt.

Though two of postwar Italy's greatest achievements have been the overthrow of fascism and the successful rebuff of communism, nevertheless these forces are still a potent threat. The failure of Italian democracy to solve these problems will destroy it. The Italian situation shows that even a nation with the ideal forms of democratic government may succumb to eventual ruin unless modifying economic and material conditions are adequate for the survival of these forms.

Although democratic Italy has done much on its own territory to remedy the overpopulation-unemployment problem, the ultimate solution rests in other hands. Unfortunately, territories with great labor power are not always those with sufficient industrial resources to employ this manpower.

If some 7 million Americans—or 10 percent of the labor force—were regularly without

work or hope of finding it, they undoubtedly would be forced to consider emigration. This is exactly Italy's problem. More than 10 percent of its "active population," or labor force, has been unemployed for more than 3 years, despite the billions spent to develop jobs and spread the work.

Looking to the future, Deputy Director General of Emigration Franco Bounous sees 1,900,000 newcomers entering the labor market in the next 10 years at the present rate of entry. Yet Italian officials foresee the prospect of no more than 1 million new jobs in that period. Thus, counting the 2 million for whom there are no jobs now, Mr. Bounous estimates that at the end of the next 10 years, Italy would still have 2.9 million unemployed. Italian officials believe it will be possible to work off this backlog in the next 10 years provided that between 2.5 or 3 million persons can emigrate over that period.

In 1950 the Italian Government presented an estimate to the International Labor Office that 1.5 million persons were available for immediate emigration in family groups. This figure included workers and their dependents and would have been raised by 2 million if an opportunity to emigrate had been given to persons who were unemployed.

What have other nations done to help? Italian Affairs for November 1955 reported that other nations, between the years 1946 to 1954 have received 1.2 million permanent Italian settlers. The United States received only one-twelfth. In the light of the foregoing facts, this has not been enough.

Realizing the inadequacy of the United States immigration policy, a Senate subcommittee under Senator Kilgore of West Virginia held hearings last December on the present policy as found in the McCarran-Walter Act. Senator LEHMAN of New York, the foremost proponent of more liberal immigration, denounced the present act. Victor Reuther of the CIO pointed out that the quota system now in effect favors Great Britain and Ireland which do not complete their quotas, while it unjustly discriminates against the surplus manpower of Italy and Greece.

At the same hearing other distinguished Americans urged a more just balance of quotas. Senator Clifford P. Case, of New Jersey, the Reverend Eugene Blake, president of the National Council of the Churches of Christ, Father William Gibbons, S. J., and Senator John F. Kennedy, of Massachusetts, all advocated measures which make it possible for thousands of Italians to find better lives on American shores. However, there is little real hope that anything can come of it at all. All realize how hard it is to interest Americans in changing their immigration policies.

The frustration of such efforts for a change in policy helped me to understand why one Italian wrote, "America is our dream." Because of the McCarran-Walter Act it is impossible for America to be more than a dream for those Italians who look to our shores for a new life. This act, more than psychological adjustment problems, explains why most Italians go and must go to Latin countries. A recent popular Italian survey revealed that 60 percent of the Italians prefer Americans to all other foreigners. Ironically this is a one-sided love affair.

It is also ironical that the Nation which leads the free world should deny freedom of migration to its free allies. Italians are good enough to work for us in a common defense; they are not good enough to live with us. Failure to provide for Italian immigration represents a failure to provide a positive program against communism. John Foster Dulles, in War or Peace scored such a lack of positive thinking and planning:

"We can talk eloquently about liberty and freedom, and about human rights and fundamental freedoms, and about the dignity and worth of the human personality; but most of our vocabularly derives from a period when our society was individualistic. There is no use having more and louder Voices of America unless we have something to say that is more persuasive than anything yet said."

Many Italians want to come to America to escape the predetermining poverty of their Italian environment. America offers them the best opportunity of becoming their better selves because it offers them the freedom in which their personal dignity and greatness may be realized. America offers them a chance to live.

A Review of the Reclamation Program

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. MILLER of Nebraska. Mr. Speaker, last September in Lincoln, Nebr., at the anuual convention of the National Reclamation Association, Mr. Guy C. Jackson, Jr., was elected President of this organization to succeed Mr. C. Petrus Peterson, an eminent Nebraskan, who had served that association as its president for many years. Mr. Jackson, an outstanding citizen of Texas, is well qualified to carry on the work that devolves upon the President of such a sound and worthwhile organization.

I should like to include the remarks made by Mr. Jackson at the 43d National Convention of the National Rivers and Harbors Congress held in Washington, D. C. on May 12, 1956 in the Appendix of the RECORD, and recommend their reading by my colleagues:

RECLAMATION

(By Guy C. Jackson, Jr., president, National Reclamation Association, Anahuac, Tex., delivered at the 43d National Convention of the National Rivers and Harbors Congress, the Mayflower Hotel, Washington, D. C., May 12, 1956)

Wise men of ancient Babylonia wrote that, before man had been taught to irrigate his fields and to control floods with dikes, life could not exist in Babylonia. The land was crossed and recrossed by ditches and canals which carried life-giving waters of the great Tigris and Euphrates Rivers. Gardens and fields had been made to blossom in profusion of beauty and abundance in contrast to the ageless desert.

Yes, inscriptions hewn in tablets of stone, recording events of a long-dead civilization, buried for hundreds of years, and then uncovered and transplanted by modern archeologists, pieced together with the crumbling canals, marking the routes of those ancient water arteries, truly marked an era of agricultural abundance of an ingenious people, an era which could only have been built with a knowledge of hydraulic engineering and the science of irrigation.

Listen to one of those ancient uncovered recordings: "I have digged out the river Euphrates * * * and I have set up a wall of safety for it—I dug out the Hammerabi Canal which brings abundance of water to the land * * * both the banks thereon I changed to fields for cultivation, and I garnered piles of grain."

Yet, that ancient era of civilization was to be destroyed, then rebuilt again in the days of Alexander the Great. One historian records that "It was a place of extravagance beyond ordinary computation and of wicked luxury, the pride and undoing of an arrogant and conquering race."

Here great rulers were to live, conspire, carouse, conquer, and die—but, the common man tended the dikes, watered the fields, and practiced, even then, the art of irrigation.

Here the famous Hanging Gardens of Babylon were built on terraces of stone in a country where there was no stone; they were kept green in a country where there was no rain. Here, almost a thousand years before the birth of Christ, was the first recorded account of a hydraulic device which raised water to the high level of the gardens. In fact, historians point to the fact that remains of the water-lifting machine, found in an ancient well, provide the only surviving proof that hanging gardens actually "existed in all the glory with which legend has invested them."

The alluvial plain between the Tigris and Euphrates Rivers has been called the Cradle of Civilization. At one time it was crisscrossed by a complicated network of irrigation canals that carried agricultural prosperity to every part of the land.

Then a less civilized people overran the wonders of that ancient world some 2,500 years ago, neglected the intricate irrigation system, and plunged the land, once densely populated and studded with many towns, back into its original uninhabited state.

Today canals, long since silted in, and parts of the area crusted with salt, stand only as fallen monuments to that ancient era of reclamation development which had turned a vast desert into the most fertile country of the world. Is it any less demonstrative in our modern day?

In ancient Egypt are also found early traces of the science of irrigation. The paintings and sculptures of about 2000 B. C. show peasantry using vessels of skin to lift the water. Remains of early irrigation structures have been found in the Nile Valley, and some authorities say the likelihood is strong that the practice of irrigation actually originated there.

In Emil Ludwig's book, The Nile, that a Pharaoh built the dam on Lake Moeris in the 19th century B. C., which stored almost as much water as a dam designed in the 19th century A. D. A considerable portion of the cultivated land in the lower valley of the Nile is still irrigated through the old basin system.

The advent of Biblical times saw the science and practice of irrigation well established. In II Kings, 3: 16–17 we read, "And he said, thus saith the Lord, make the valley full of ditches for Ye shall not see wind, neither shall Ye see rains; yet, that valley shall be filled with water, that Ye may drink, both Ye and your cattle and your beasts."

The British Society of Anthropology accepts as fundamental the doctrine that, historically, civilization followed the invention of irrigation.

Prehistoric Indians of the Southwest practiced irrigation. Within the boundaries of the Casa Grande National Monument in New Mexico can be seen traces of the ditches they constructed to irrigate their fields. The first Spanish explorers of the Rio Grande Valley found the Indians watering the thirsty soil as their forefathers had done for unnumbered generations before them. In southern Colorado, northern Arizona, and New Mexico are remains of irrigation works of whose origin even tradition is silent.

It is well for us to review and remember these historic examples.

In viewing the problem of reclamation in the 17 Western States of this Union, we should take a look at the accomplishments of the past, the problems of today, and anticipate the needs of tomorrow.

The Federal reclamation program which was activated by the Reclamation Act of June 17, 1902, was a natural outgrowth of the previous land disposal program of the Federal Government. The policies which had been adequate for land settlement in humid areas, such as the 160-acre homestead under the act of 1862, was of little value in the arid western part of these United States. Other programs were tried and were helpful. The important thing to remember is that this Nation was founded primarily by those who wished to acquire their own land, a hope denied them in their homeland on the Old Continent. Land policy on this continent over the years, was a struggle between the speculators and the land monopolist on one hand, and the individual enterpriser on the other. Freedom loving and rugged pioneers compelled the Nation to accept the principle that he, who first reclaimed the land from the forest and the Indian, had the first right to its possession. This Nation owes much to the determined men who made farms in the wilderness and then insisted upon the ownership of same.

The first attempt to meet the needs of the West in land disposal policies was the Desert Act of 1877 permitting entry on 640 acres. There were many abuses under this act and modifications were necessary in view of increased settlement requirements, which reduced allowable acreage to 320 acres and the settlers were encouraged to provide their own irrigation systems. Some 10 million acres were entered and patented under this act and this land formed the basis of the private enterprise development of irrigated lands in the West.

The Carey Act of 1894 anticipated the development of arid lands by the States. It permitted grants up to 1 million acres for settlement under State supervision and on terms very similar to those of the Desert Act. Many of the States endeavored to establish policies for development under this act. However, the accomplishments were not as great as expected, except for certain limited areas; approximately 1 million acres were settled under this program. This act is still in operation.

As the West was settled under the Desert Act and the Carey Act, many of the easily developed projects were put in operation and the more expensive ones were bypassed, as the cost was too great to be borne by the individual or by the State. This brought about the Reclamation Act of 1902, under which we now operate and under which the wealth of the Nation has been tremendously increased.

While there was a vast amount of water in the western rivers the erratic flow from season to season and from year to year was the big problem to be met and overcome. By 1900 the firm flow of nearly every stream was overappropriated and in the later part of the growing season many crops starved for water and guns were brought into play as a method of enforcing rights. It became increasingly evident that the off-season flow of these rivers had to be impounded so that these lifegiving waters could be used during the season of need.

While there have been numerous amendments and modifications of the Reclamation Act of 1902, the basic principles of this act have been retained, including the family-size farm. The entire Nation has gained a substantial value from the more than 125,000 family-size farms, receiving water from this program. This is exemplified by the fact that to date taxes to the Federal Government paid by these units total more than $3 billion, a substantial amount in excess of the total reclamation expenditures of $2.4 billion. These values will continue for generations to come and will pour money into all of the States of the Union in payment for the variety of goods produced by plants, large and small, in all of the United States.

All of the people of this Nation are dependent upon the soil and water resources for their daily existence. A great portion of our food, clothing, shelter, and industrial raw materials come from these resources. Certainly this will continue in the future, and it is now established that by 1960, our 166 million people will increase to 178 million and by the year of 1975, we will have reached 225 million people. Certainly the critics of the reclamation program do not realize the demand on agriculture which is being brought about by the ever-increasing population. These critics talk long and loud about surpluses, when in truth and fact, these are reserves, and are needed by us to keep our dominant position in this world of nations the same as a reserve of airplanes, guns, ammunition, tanks, etc.

During the past 35 years, there has been no material increase in our total crop land acreage in the United States. Lands brought into production during that period through reclamation, drainage, and clearing have been approximately offset by lands that have gone out of production due to withdrawal to nonagricultural uses, erosions, and deterioration.

In the continental United States there are approximately 1,904,000,000 acres of land. Some is good and some is not good and, of course, some is almost worthless to agriculture. Approximately 409 million acres are now being used to grow cultivated crops. Approximately 600 million acres are classed as forest or woodlands, and approximately 189 million acres are nonagricultural.

At present more than 115 million acres is being occupied by cities, roads, highways, railroad right-of-way, defense establishments, factories, mines, parks, airports, etc. Approximately 80 million acres of this was originally good farming land. The withdrawal of agricultural lands for nonagricultural purposes is accelerating each year. In fact, over 1 million acres of farmable land is annually going to homesites, industrial, and commercial developments, highways, airports, and other nonagricultural uses.

Good land is being taken out of agricultural production at the rate of about 1,800,000 acres per year for the following reasons:

	Acres
Municipal expansion, suburban development, airports, industrial and military establishments, highways, etc	1,100,000
Tree planting	200,000
Soil erosion	400,000
Water logging, salting, sediment deposition, etc	100,000
Total	1,800,000

If such withdrawals of land from agricultural uses continue at the present rate for another 15 years, a total of more than 100 million acres of land suitable for agriculture will be retired to nonagricultural purposes. During the past 15 years enough land has been made unavailable for farm use to represent the equivalent of 225,000 average size American farms.

Even with the improved seeds, farming methods and fertilizers together with the substitution of motor power in lieu of horse and mule power, we are still facing a complete balance of supply and demand by 1962, and all of this in face of the fact that, since 1920 to the present time, the number of crop acres has been reduced from 3.9 acres to 2.5 acres per person.

Reclamation development has added very little to the so-called surpluses and, in fact, has contributed more to the improvement of the diet of the American people by the production of more vegetables, fresh fruits, and nuts, and we are now eating 3 times as much citrus fruits as we did 20 years ago, 4 times as much carrots, etc. This means a stronger people; the boy of today at 16 is 6 inches taller and 31 pounds heavier than his grandfather was at the same age. Grandpa, in 1877, when he was 14 weighed 87 pounds and was 4½ feet tall. His grandson today is 5 feet 3 inches tall and weighs 118 pounds. A better diet has materially contributed to this improvement of the American people.

In addition to the increased agricultural requirements for water, it is anticipated that within the next 20 years, our industrial and domestic need for water will increase by 145 billion gallons a day. This is equivalent to the flow of 11 Colorado Rivers, and, of course, the Colorado is one of the largest streams of the West. There will also be a great increase in the use of electric power. Part of this will be by steam generation, yet much of it can be obtained by harnessing the flow of our rivers, all of which will again contribute to the national wealth.

In conclusion, those of us who have a real desire for a strong and healthy Nation for generations to come must look and plan many years into the future for the conservation of our soil and water resources and we well know that it takes from 5 to 25 years to develop a reclamation project from its inception to its completion, so, without adequate planning in advance, we can well be caught short on food supplies before we realize it.

Federal reclamation produces only a small percentage of surplus crops: Wheat, less than 2 percent; upland cotton, about 6.5 percent; corn, about one-third of 1 percent; tobacco, none; rice, less than 1 percent.

Our population is increasing at the rate of 2,800,000 annually and that rate is accelerating each year. Present estimates for 1975 are from 214 to 221 million. Thus, it is evident that agricultural surpluses will disappear long before most reclamation projects now being authorized are brought into agricultural production.

It is the program of NRA to assist in the continuing development of our natural resources through irrigation, so we will not be in the position of having too little too late.

In keeping our Nation strong, it is not a question of guns or groceries, but it is a question of guns and groceries.

I have no time for the critics of the reclamation program. Their chirping reminds me of an old preacher who, in one of his prayers, said, "Lord, we can take care of the big things, but deliver us from the gnats."

The Problem of Water in India

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Water!" published in the Lutheran magazine for July 18, 1956. The article deals with the problem of water in India. It is timely and very informative.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WATER—THERE'S A DEEP WELL NOW IN THIS DROUGHT STRICKEN VILLAGE IN INDIA

(By Arne Souik)

"There is no denying it," wrote a Swedish missionary in mid-1953, "it has been terribly difficult these last 5 or 6 years to be a missionary in South India."

His problem was the lack of water. The church had been trying to build congrega-

tional work among the simple people of rural India. They had helped them build little village chapels. They had opened schools. They had employed catechists and teachers. The toil of many years seemed to be bearing fruit.

But when, year after year, the monsoons failed, and even the wells of the richest landowners went dry, when the seed grain never sprouted in the fields, and the people began to eat roots and the leaves of jungle cactus, then life came to an end in the villages. The highways to cities were filled with migrants trying to find some way of maintaining life. The village work of years was at a standstill.

The hardest thing to face was that there seemed to be no way of moving that towering mountain of human suffering. For what solution, after all, was there in the limited distribution of food relief that had come from Christian people in America? Or what help would it be if the missionaries or the mission should share all they had?

This was the situation which inspired the well-drilling project of the church of Sweden Mission—a program which, in the past 3 years, has brought hope and new life to village after drought-stricken village.

The Government of India had placed high on the list of priorities for the 5-year plan the search for sources of a dependable and hygienic water supply. But its program must be limited to the larger cities and towns.

Smaller places, even if they were able to make the required pledge to pay part of the cost, were still faced with the prospect of almost endless waiting for their turn, and in the meantime, more years of barren fields, and death.

The Swedish church "Action for Wells" in South India has been filling the gap. The first well-drilling machine, accompanied by a Swedish technician, arrived from Sweden late in 1953. Another was added in 1954, and now there is a third. By the end of the first year's work the light and efficient machines had brought water to 46 villages, including among them places located in Palladam, a district of almost constant drought.

The work is being carried on under the leadership of Pastor Yngve Frykholm. Engineer Ragnar Edervall headed Indian crews whose increasing efficiency and spirit have impressed government engineers. But not only officials are impressed.

"Our well-driller," reads one report, "is a huge success. For Indians it is an unparalleled sight to see a white man working with his hands all day long, smearing himself with sweat and oil, strong as a bear.

"As he lifts one end of a heavy drill shaft and throws it aside, a murmur of fearful wonder passes through the throng of onlookers. Without having had time to learn the language, he makes himself understood by his crew, and he has become a friend of the big and small in the villages and mission stations."

Last month there were a hundred hand-operated deep-well pumps in use in the villages of the Coimbatore and Madurai districts. Three teams of Indian drillers and assistants were carefully trained to continue the work after the Swedish engineer, Mr. Edervall, returned to his homeland last year. A full-time mechanic with an assistant makes regular tours of the installations for checkup and overhauls.

In Kosumadai (one of the early projects), a 100-meter-deep well, drilled with much difficulty and considerable damage to the equipment, failed to find water. Months passed before a second deep well was successful. The whole village gathered before the little chapel for a thanksgiving service that has since become traditional—with singing and prayer and garlands of flowers and a talk about the one who told his disciples of the blessedness of offering, to "even the least of these my brethren," a cup of water.

Wells are drilled on the common lands of the villages, thus assuring that the water will be available to all. No payment is required either for drilling the well or for the water drawn. But one rigid requirement is laid down—that caste and outcaste shall receive water without discrimination.

Missionary Frykholm tells the story of the first pumping from the well in Santhipuram:

"Just 10 days after beginning we were ready to undertake the anxiously awaited test pumping. We had gone 37 meters deep, and we could hear the splash of water from the black depths of the hole. The long sections of pipe were coupled together and sunk into the well.

"The report of our work had gone throughout South India, and it happened that that very morning we were receiving a visiting group of journalists and officials. They stood with the villagers in a close-packed ring watching in suspense as the pumping began.

"And water came, full splashing flood. Muddy at first—and some villagers looked a bit disappointed. But the distinguished onlookers walked away satisfied, for it was calculated that the well could pump 1,000 gallons an hour.

"You should have been there to witness the scene that followed, as the flow of mud turned to clear, fresh water. Two old men crept forward, each with his jar. Might they ask to have them filled? Certainly, take all you want, that's what its for. Those two bent, wizened laborers, who had to work an hour to pay for every jar of water they used, filled them now with the finest water they had ever seen—free.

"All at once the place was crowded with people. From every house in the village they came rushing with their jars, some of them newly polished and shiny, others worn and dented, some simple earthen jars whose holes had been plugged with cloth—a collection of every kind of receptacle, got hold of hastily anywhere, as many as they could carry.

"Old women and little girls with their brothers on their hips and jars on their heads, crouching outcasts and landed farmers, all came running like mad, all afraid that the water might cease to flow.

"We shouted until we were hoarse, trying in vain to form a line. We threatened to stop the pump. Finally we forced our way through and filled the jars ourselves. There was shouting and laughing, but there was also a sense of panic—'Don't let the water stop until I've got some.'

"History was made, too, that day as the old-age prejudices broke down before this streaming water. It is unheard of for a caste Hindu to take water from the same well as an outcaste. It is equally unthinkable for an outcaste to dare to take water where a caste Hindu has been with his jar. We watched carefully to see what would happen. Would the caste Hindus stay away if we permitted the outcastes to take water?

"Resolutely we filled the jars in turn, one for a caste Hindu, one for an outcaste. There was embarrassment at first, but in the joy of having enough water in the village the people overlooked their prejudices. It was when Ragnar Edervall and I got too tired to fill any more jars that the real revolution took place in Sinthipuram.

"Two of the leading Hindus took our places and filled jar after jar. As the first woman of the timid crowd of outcastes got her filled jar from the hand of her high-caste master she nearly fell backward in astonishment. A murmur of surprise went through the crowd. But soon this, too, was taken as natural.

"There seems now to be a surplus of water in spite of the size of the village and the apparently immense need for fresh water. Perhaps this can be used to cultivate the land nearby.

"We hope that a new spirit of understanding and collaboration between rich and poor, high and low, Christian and Hindu, will grow out of their newly discovered sense of solidarity.

"Tomorrow we move the machine to another village. Then we install the permanent pump here. And next week we shall bring another well-drilling machine from Madras. What a glorious life."

Small wonder that the missionary to whom life in South India had been so hard could end his report. "Hvor haerligt liv—What glorious life."

Excerpts From Speeches on Various Subjects

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. McGREGOR. Mr. Speaker, as long as it has been my honor to represent the 17th Ohio District in the House of Representatives, I have endeavored to keep the people of my district familiar with my activities and my position on various issues.

On July 2, I inserted in the RECORD excerpts of speeches that I have made on farm problems. Today, Mr. Speaker, under consent to extend my remarks in the RECORD, I include excerpts of various speeches I have made on other subjects in order that the people may be familiar with the true record and my position on national issues.

If anyone desires to find these remarks in full, they are printed in the CONGRESSIONAL RECORD on the dates indicated:

WOMEN OF 60 SHOULD RECEIVE SOCIAL SECURITY

(March 18, 1955)

Mr. Speaker, I have introduced a bill in the House of Representatives to amend the Social Security Act to lower from 65 to 60 the age at which women may become entitled to benefits thereunder.

Mr. Speaker, 221,242 American women between 46 to 64 have applied for jobs in State employment offices.

The married woman under 65 does not have enough to get along on even though her husband is receiving social-security benefits. If she becomes a widow before reaching the age of 65 she receives a lump sum of $255 from social security. She must seek employment.

Reducing the age to 60 at which women may become entitled to benefits will cost 1 percent of the payroll costs. Compared to the sum of moneys sent to help other women throughout the world, is 1 percent too much to ask?

I believe this bill to be an economic necessity as the bulk of employers close the doors to women in this age bracket. According to the questionnaire sent to the 17th Ohio District, 68 percent of my constituents favor lowering the age so that women could receive benefits at 60.

TRUTH ABOUT TAX REDUCTION

(March 18, 1955)

Mr. Speaker, some New Deal orators have been exhorting the public with the usual extravagant political claims of being the party of the little man in tax-reduction measures.

Let us look at the record. It will speak for itself and it will show that under New Deal philosophies the so-called little fellow

has had to pay higher taxes. It has been the Republican Party which has cut taxes for the lower-income groups. Since the first income tax law was passed by a Democratic Congress in 1913, there have been 15 income tax increases. Democratic Congresses voted all but one of these increases.

The New Dealers put low-income people and wage earners on the tax roll. In 1932 there were 1,900,000 taxable Federal returns. In 1952 there were 46,800,000 such returns. Republicans did the cutting 7 out of the 10 times that income taxes have been reduced since 1913.

In 1954, Republicans reduced taxes by a total of $7.4 billion * * * the largest cut in any 1 year in history. The Republicans reduced taxes on electric-light bulbs, stoves, refrigerators, electric toasters, telephone and telegraph bills, pharmaceutical supplies, and many other excise taxes. This cut benefited all taxpayers.

Sixty-two cents out of each dollar in the tax reduction went to individuals with approximately 25 cents of this going to taxpayers with incomes under $5,000.

The New Dealers have been endeavoring to play politics with tax legislation claiming that they want to decrease income tax exemptions. Again, I say, let's look at the record. The following chart shows the exemptions from 1931 to 1954:

	Republican 1925–31	Democratic					Republican 1948
		1932–39	1940	1941	1942	1944	
Single	$1,500	$1,000	$800	$750	$500	$500	$600
Married	3,500	2,500	1,500	1,500	1,200	1,000	1,200
Dependent	400	400	400	400	350	500	600

Farm Problems—Controls

(May 4, 1955)

Mr. Speaker, my farmers are of the definite opinion they want a minimum of Federal controls and are looking forward to the time when they can live as free citizens without Government interference.

Why not establish a program that will ultimately allow us to get rid of controls, Mr. Speaker, so that the farmers of today will be able to make an honest living and not be dictated to by some bureaucrat who, in many instances, knows nothing about farm problems.

Social Security

(August 4, 1955)

Mr. Speaker, now that the First Session of the 84th Congress has adjourned and I cannot be accused of playing politics, I want to take this opportunity to thank the Democratic Majority Leadership, as well as the Republican Minority Leadership, and the Majority Members, as well as the Minority Members, for their assistance in making it possible to give the aged people the relief I asked for when I introduced H. R. 5064 on March 18, 1955.

Especially do I appreciate the thoughtful consideration given to the subject by the members of the Ways and Means Committee. I am also grateful for the many telegrams and letters I have received from people all over the country complimenting me on the introduction of this legislation. I am certain their recommendations and suggestions to me, as well as to their Congressmen, played an important part in having the House of Representatives pass social-security legislation granting age reduction from 65 to 60 years to women who desire to receive social-security benefits.

Permit All Farmers to Vote on Wheat Referendum

(January 23, 1956)

Mr. Speaker, I think we have become a great Nation because of the many freedoms it is our privilege to enjoy. That freedom has been protected at the ballot box by an expression of the views of the majority. With this thought in mind, I have introduced a bill, H. R. 8697, to permit wheat farmers, including those who plant less than 15 acres of wheat, to vote in any wheat marketing referendum conducted by the Secretary of Agriculture.

Regardless of the "pros" and "cons" of a marketing program, the majority of the people should determine whether it should be in effect or not in effect.

Permit Farmers to Grow What They Need

(January 23, 1956)

Mr. Speaker, I have introduced a bill, H. R. 8698, which will exempt from marketing quotas farmers who raise grain entirely for their own use on their farms either as feed or seed. I feel this legislation will give freedom from a program to that group of farmers who now do not derive benefit. Certainly in this great Republic responsible farmers should have the right to grow the crops that are necessary to sustain their own farms without Federal control or interference.

Give Rural Mail Service to All

(January 26, 1956)

Mr. Speaker, I have introduced a bill, H. R. 8845, which gives authority to the Postmaster General, subject to the postal laws and regulations, the right to extend rural mail routes. This bill, if it becomes a law, would give rural mail delivery, as nearly as practicable, to the entire rural population of the United States.

After all, Mr. Speaker, we are all citizens and we are entitled to equitable service and treatment regardless of where we live.

Editorial on President Eisenhower

(January 30, 1956)

Mr. Speaker, under leave to extend my remarks I am enclosing an editorial appearing in one of the outstanding newspapers of my district, the Mount Vernon (Ohio) News. In well-chosen words, it clearly defines the position of our President and recognizes that his performance in office confirms the feeling of trust and confidence that the people of our Nation have for him. The records will show, Mr. Speaker, that President Eisenhower has dedicated himself to the preservation of peace. The people trust him, Mr. Speaker, regardless of his politics. He has given us full employment without war. He has balanced the budget without jeopardizing defense or any other segment of our economy. He has cut waste and unnecessary expenditures and has given dignity to his office.

Farmers—Social Security

(February 22, 1956)

Mr. Speaker, I am today inserting in the Congressional Record petitions signed by many of my constituents of the 17th Congressional District of Ohio. You will note, Mr. Speaker, that these citizens are asking for the repeal of that portion of Public Law 761, or any other social-security law which contains compulsion for farmers, farmer-employer, or the farm owner.

Regardless of the merits or demerits of this subject, I am one who firmly believes that all should be given an opportunity to be heard and their views brought to the attention of this Congress. I respectfully ask that the proper authorities, or committee, of this Congress give every consideration to the request contained in these petitions.

The Truth About Taxes

(May 2, 1956)

Mr. Speaker, under leave to extend my remarks, I would like to put into the Record "The Truth About Taxes." The records are available for anyone to see and the publication of these records, Mr. Speaker, certainly should stop some of the wild remarks and statements that are being made relative to the tax program which we all admit is high. The record will show that unnecessary expenditures are being cut and that for the first time in many years, we have a balanced budget. We hope, with the continuation of these efficiencies that at an early date we will again be able to cut taxes and reduce our national debt. A reduction in taxes means an increase in buying power or an increase in wages for all. I insert herewith an article entitled "The Truth About Taxes."

"THE TRUTH ABOUT TAXES

"Democrats parroting the Truman fabrication that, of the '$7 billion tax cut put across in 1953' by the Republicans, 'corporations and people with incomes over $5,000 a year got 91 percent of the cut and all the millions of taxpayers with incomes of less than $5,000 a year got only 9 percent of the cut,' should be corrected as follows:

"1. Of the total $7½ billion annual tax cut made possible by Republicans in 1954, 62 percent of the cuts went to individuals, only 38 percent to corporations.

"2. Not 9 percent, but 23 percent went to people in the under-$5,000 category.

"3. Most people got a 10–11 percent income tax cut; but for those in the highest brackets the cuts scaled downward to only 1 percent at the top.

"4. The under-$5,000 group received more than its fair share of the income tax cuts, because the people who paid 33 percent of the total income taxes collected under the Democrats got 37 percent of the tax reductions made possible by the Republicans in 1954.

"(The above figures are official Treasury Department computations.)

"5. The real 'High Tax Party' is the Democratic Party, because 14 of the 15 income-tax increases (but only 3 of the 10 reductions) since 1913 were enacted by Democrats.

"Little fellow gets break

"6. The average $5,000 family man (with wife and two children) in 1932 paid only $12 in Federal income taxes—but he paid $266 in 1952—22 times as much. Republicans made it possible to give the $4,000 man a 10 percent income tax cut. At the same time, the millionaire was given only a 1 percent cut in the 1954 Republican tax reduction, proving that, proportionately, the little fellow received a much bigger tax break than the big fellow.

"7. The Roosevelt-Truman administrations in 20 years increased the Federal tax burden on everyone by 31 times—from $2 billion to $63 billion. Hidden taxes that were unknown in 1932 mushroomed under the Democrats to the point where by 1950 they exceeded $700 a year per family."

Tariff Program

(June 18, 1956)

Mr. Speaker, I am today in receipt of a chart showing what our so-called reciprocal trade and low tariff program is doing to one of our great industries, who for years has

given employment to many, many people. The chart that I am inserting shows a steady decrease in earnings, in total wages and total man hours worked.

Mr. Speaker, for many years I have been calling to the attention of the Congress this situation and others of similar nature as it affects industries in my district. It is disgraceful that we are asking our American labor, manufacturers, and farmers to compete with a product produced in other countries by low wage rate labor. I say it is time to stop such a procedure.

Farm-to-Market Roads

(June 26, 1956)

The bill, H. R. 10660, Federal Highway Act of 1956, retains the provision which I sponsored in 1954 that gives permission to the State Highway Departments and the local authorities to use Federal funds on farm-to-market roads. The specifications covering these roads can be drawn by local county engineers with the approval of the Highway Department and need only to meet the needs of the local communities. This means that Federal Highway funds can be used on farm-to-market roads without rigid adherence to Federal specifications which often in the past, because of the exorbitant cost, has prevented the construction of needed roads in many sections of rural areas.

Relocation of Utility Facilities

(June 26, 1956)

Section 113 of H. R. 10660 makes it permissable for Federal funds to be used to reimburse a State for additional relocation costs which the State had paid for under its own laws. Section 113 is the same as the bill as passed by the House. This section has been recommended and accepted by the conferees recognizing the equity of reimbursing utilities for the cost of relocating facilities when required for Federal Aid Highway projects.

After lengthy discussion, the conferees have endeavored that this section makes it clear that it is the intention of the Federal Government to assume its apportionate share of utility relocation costs whenever a State allows such costs. Under the existing practice, Mr. Speaker, of the Bureau of Public Roads, Federal funds may participate in utility relocation costs to the same extent as other construction costs without percentage limitations based on the State's apportionment. This legislation encourages the States to review their contemporary status and take objective action in accordance with such review. Mr. Speaker, this section will be of great assistance to small utilities, both public and private, especially including the REA, small telephone companies and small villages through which highway systems run and now have storm sewers, water sewage and lighting utilities which do not bring in the revenue necessary to relocate if compelled to do so by new highway alinement.

Budget and Savings—Public Debt

(July 16, 1956)

Mr. Speaker, I am most happy to note that in the final report of the fiscal year we finally have arrived at a place where we again have a balanced budget. The records will show, Mr. Speaker, that Government spending has been cut from $10 billion to $14 billion below the level of the previous administration, despite the continued heavy demands of the cold war. The record shows that Government spending is taking only 19 percent of the national income, which is a 6 percent cut from the 25 percent share of the previous administration.

I repeat, the 1956 budget has been balanced and we will have approximately $2 billion surplus. Mr. Speaker, this is a good record but I firmly believe that with the continuation of our existing practies we will be able to again lower our national debt and give the people of our Nation another tax reduction.

Communism and Security

(July 16, 1956)

Mr. Speaker, I am pleased to note that we have new anti-Communist laws which will protect our country and our people. Among these new laws is one revoking citizenship of Communist conspirators convicted in the future. (2) Increase penalities for harboring Communist fugitives from justice. (3) Extend sabotage definition to include biological warfare items. (4) Require registration of Communist-action and Communist-front printing equipment. These new laws and others of similar nature will go a long ways toward stamping out Communism in our country. Certainly our loyal citizens will appreciate this added protection.

Defense

(July 16, 1956)

Mr. Speaker, I have made many trips to my district during the last year and I firmly believe that the people it is my honor to represent have confidence in President Eisenhower's judgment as to what constitutes adequate strength. I sincerely believe, Mr. Speaker, that the President knows more about military affairs than many of his citizens. Our ground forces, air defense squadrons, surface ships and guided missiles are completely modern and ready for immediate service at any time. I am sure that this administration's defense policy has achieved the greatest efficiency, economy, preparedness, and adaptability in peacetime history. A prosperous economy easily convertible to war has been maintained while cutting defense costs by $10 billion. Research in weapons has permitted shift from manpower to weapon power. I am sure that all will agree, regardless of politics, that this is an excellent record.

Labor

(July 16, 1956)

Mr. Speaker, I have just received a series of various reports relative to our economy, which of course included the labor field. I am indeed happy to note that employment is highest in history. An average of 63.2 million had jobs, which smashed all previous records. This record shows, Mr. Speaker, that approximately 3 million more held peacetime job than were held previously, even in war. We are in a sound economy, Mr. Speaker, when it is possible for our people to have jobs without war.

Both hourly and weekly wages are at an all-time record high averaging nearly 13 percent higher in peactime 1955 than in wartime 1952.

Taxes

(July 16, 1956)

Mr. Speaker, I am one who firmly believes that a heavy tax burden weakens the economy of our country. A tax increase means lower wages because of the decrease of our purchasing power. A tax reduction means an increase in wages because we have more money to spend. I am happy to note that this administration has given Americans the biggest tax break in history—starting in 1954. Each taxpaying family has received an average tax cut of $100 per year. Here's how this administration helped everybody:

First. Reduced personal income taxes 10 percent for most taxpayers—saving $3 billion.

Second. Cut excise taxes on handbags, cosmetics, movies, household appliances, etc.—saving $1 billion.

Third. Revised the whole tax structure, reducing taxes by giving bigger medical deductions, special aid for working mothers, retired people, parents with working dependents, partial relief against double taxation of dividends, liberalized depreciation rules, etc.—saving $1.4 billion.

Fourth. Working widow can now deduct $600 paid for care of her children under 12 years—saving $120 on $3,000 income.

Fifth. Parents can now deduct $600 for minor child as dependent even if he earns over $600—saving $120 on $3,300 income, $132 on $6,000 income.

Sixth. Retirement income of persons over 65 not drawing nontaxable social security benefits (school teachers, policemen, firemen, etc.) is now exempt up to $1,200—saving up to $240 a year.

Seventh. Excise tax cuts on luggage, jewelry, telephone bills, movies, cosmetics, etc. give Americans $1 billion more spending money a year.

Be Sure To Vote

Mr. Speaker, a day of decision will be election day, November 6, 1956. We have become a great Nation because our citizens are interested, and each and every one play an important part in our Government. We can continue to be a great Nation only if every qualified voter regards it as his duty to exercise his franchise and prove to the world that Americans value their right to take part directly in the election of Government officials and in the management and control of our Republic. The number of ballots cast will demonstrate to the world how much we value that privilege and will emphasize that the American form of government marches forward with determination, vigor, and strength. Everyone should carefully analyze the candidates to determine whether or not they believe in the philosophy of government that has made America a great Nation. Every candidate should make known his position on the issues confronting us, and also make known his record. My record is public and I invite your investigation. The record will show that we are winning the greatest battle of all time in preserving our form of Government, restoring real stability in our domestic and foreign affairs, and giving us all what we hope and pray for, "a lasting peace." The continuation of this program calls for outstanding leadership, honesty, integrity, careful planning and judicial administration of the law. You will be assuming your proportionate share of this responsibility when you go to the polls on Tuesday, November 6, and vote for the candidate of your choice.

Be sure and vote Tuesday, November 6.

Advice From Jim Farley

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial which appeared in the Daily News, of Tarrytown, N. Y., on Friday, July 6, 1956:

Advice From Jim Farley

We know James A. Farley pretty well in Westchester. And although this is a pre-

dominantly Republican county and Mr. Farley is an all-out Democrat, we usually get along just fine.

Consequently, it should interest a lot of us to read what Jim Farley says about the Hoover Commission, on which he served, and its report.

"My friends on Capitol Hill tell me they are much impressed with the report as a whole even though they may as individuals differ with certain provisions," says Mr. Farley.

"But when I ask them why the Hoover report legislation isn't moving faster they tell me in effect that they just simply aren't being asked enough."

So Mr. Farley advises that anybody who wants the recommendations of the Hoover Commission on Government Reorganization put into effect should write his Congressman.

Jim Farley should know what he's talking about. He has been close to the Washington scene ever since he entered FDR's first Cabinet back there in 1933.

At that time, it is interesting to recall, the Federal budget was $4 billion. Now it's around $66 billion.

In that year of 1933 there were 450 Federal agencies. There are now 1,900.

This Hoover Commission report shows how action by Congress and the executive branch could save between $5 billion and $6 billion and bring substantial cuts in taxes.

President Eisenhower favors the report. But Congress hasn't done much about it because "they just simply aren't being asked enough."

It's your turn, then, Westchester taxpayer. How about writing that letter to your Congressman?

Rivers and Harbors

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I include the address made by the Honorable CHARLES A. HALLECK, Congressman from Indiana, assistant minority leader of the House of Representatives, before the 43d Annual Convention of the National Rivers and Harbors Congress in Washington, D. C., on May 11, 1956. It is as follows:

REMARKS BY HON. CHARLES A. HALLECK, MEMBER OF CONGRESS

Mr. President, my colleagues, and members of the National Rivers and Harbors Congress, if the distinguished gentlemen who have preceded me in welcoming you to these parts haven't convinced you that we are glad to have you in town, I don't know what I might add as a clincher.

It's good to have another "Congress" in town.

Misery loves company.

Maybe you folks can take some of the heat off us for the next few days.

As a matter of fact, I suppose some of the folks back in my district would say that I ought to take advantage of my appearance here this morning to put a little heat on you for support of our own harbor project.

You know, I've been trying ever since I came to Congress to help sell the idea that Indiana ought to have a public harbor at the mouth of Burns Waterway on Lake Michigan.

I've been in pretty distinguished company, too: Republicans and Democrats. Governors from the time of the late Paul McNutt to George Craig, and Senators down the line, including one who is now a Supreme Court Justice—Sherman Minton—have all lent their support.

We've been working at it for more than 20 years and we haven't got past the survey stage yet.

We've had so many studies made that probably if we took all the documents that have been compiled and dumped them in Lake Michigan, we'd have a a good start on a breakwater.

I guess it's a good thing I didn't try to make a living as a lobbyist. I'd have starved to death a long time ago.

But I must say that my experience with the Indiana Burns Harbor plan and the troubles that crop up from time to time along the Wabash, Kankakee, and Iroquois Rivers, which run through my district, have made me realize that there aren't many subjects more complex, more frustrating, and, I might add, more prone to controversy, than this whole business of the sound and orderly development of our national water and land resources.

Quite naturally, it would be difficult to find anyone who would admit that he wasn't for the orderly development of these resources.

Everybody is for economy, too—if you take the "me" out of it.

Well, in any event, I suspect your experience in this field of resources development has been an education to you as it has to me.

In the activities of your congress, as in the activities of the Congress of the United States, broad public understanding of the problems involved is a continuing necessity.

In your field of endeavor, you come face to face with two pretty tough customers—Mother Nature and human nature.

With this in mind, I say sincerely that anything you may accomplish—and your accomplishments have been considerable—is nothing short of heroic.

So, we welcome you to Washington as fellow workers in the vineyard—as allies in a great cause.

Only the most short-sighted of citizens would deny the vital importance of the program to which your organization is dedicated.

But whereas you, by choice, confined your efforts to one field, wide though it may be, the responsibilities of the Congress of the United States are of necessity far more diverse.

I think I can safely say there is none among us, in the House and in the Senate, who would not wish that far more attention could be given not only to this matter of resources development, but to the many other vital areas of national importance which come before us for consideration.

But we get spread pretty thin.

At the same time, I think it is safe to say that all of us wish more money could be appropriated for these projects in which you are interested so that progress could be speeded.

But the taxpayer's dollar is spread pretty thin these days, too.

Thus, as you must compromise in your studies, bringing together somehow the many interests that are affected by projects involving rivers and harbors, we in the Congress must also weigh values and reconcile conflicts as best we can.

It is our obligation to strike such balances as we can between what we would like to do and what we can do.

It is our complicated job to reach decisions on pleas for more attention to, and more money for, the defense needs of the country—for more aid to schools, more aid for highways, for health, for old-age assistance, and many other things, having in mind, at the same time, the capacity of our great domestic economy to shoulder the burdens of public spending.

By your past actions, you have demonstrated a gratifying understanding of the Government's role in this great work of resources development.

You have proved yourselves to be unselfish friends, patient and anxious to be helpful.

I assure you, your attitudes and your diligence have been deeply appreciated by those of us in Government who know of your work.

I hope, for your part, that you have found, and will continue to find, that we in the Government recognize fully the profound importance of the cause for which you labor—without reward, may I say, other than the personal satisfaction of knowing that you are performing a service to your Nation.

So welcome, indeed, to the Capital.

We are happy to have you here, to meet with you and to discuss with you our mutual interests, our mutual problems, and our mutual aspirations for America.

Inflation

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Carroll County Independent, Center Ossipee, N. H., Friday, July 6, 1956, entitled "Inflation."

The editorial follows:

INFLATION

All too many people who hear the term "inflation" on television and radio, or read the word "inflation" in the papers, think that it is an abstract term that does not concern them, and is simply another sonerous earfilling phrase used by politicians. We New Hampshire folks, being thrifty and saving, have the laudable habit of playing squirrel with every available dollar and salting it away in bank or bonds for the rainy day to come.

But inflation steals constantly from the value of such savings. Hard money and the hard dollar is long gone and will probably never return. We now use paper money.

And that paper money, or that paper dollar, has value only in the goods and services which it will command.

According to reasonably accurate statistics, the purchasing power of the dollar has shrunk about 45 percent since 1946. This means that the man with $1,000 in the bank in 1946 now has only $550, as far as commanding goods and services are concerned.

He may still have the same $1,000 sitting safely in the same bank, but for all practical purposes, $450 has been drawn from the account.

There are no signs of any long term deflation, or return of the purchasing power of the dollar. Deflation means less money in circulation, a lowering of wages and prices and obviously less employment.

We cannot visualize either political party permitting such an event. When the inevitable down swing comes in the business cycle, the moment it begins to cut deep enough so that people are beginning to get hurt, there will be a rush for Washington by town, county, city and State political leaders who will demand quick pump priming and the appropriation of billions of dollars for make work projects.

Only a Congressman with a sincre desire to commit quick political suicide would vote against such projects. Economic forecasters are all in disagreement as to when

the economic downturn will come and what its duration will be. But they are all in agreement that in the long run, over a term of years, the dollar will buy less and less and that inflation will slowly continue.

Of course there will be down turns in business. There will be gluts of cars and television sets and washing machines. There will be short periods when the dollar will buy more than it does today. But averaged through the years the buying power of the dollar will slowly be eaten away. The process will be noticeable only when viewed over the perspective of the years. History shows that once the currency of a nation begins to depreciate, it does not recover.

This situation puts the average man in a hard place. Obviously he must have a savings account to cover emergencies. Obviously he should have some life insurance. Obviously he should pay for his home.

But after that what?

The well-to-do employ investment counsel and diversify their holdings between real estate, cash, bonds, preferred stocks and various types of common stocks.

The average thrifty man simply cannot do this. He has neither the time nor the skill to diversify his holdings between a few bonds, a few preferred stocks and a few shares of the best companies in the oil, building, automotive, chemical, steel, electrical, coal, public utility, railroad, office appliance, food, paper, tobacco, machinery, rubber and communications industries.

This objective can be accomplished easily however by purchasing shares in one or several of the many trust funds that have been available for the last third of a century.

Of course this is no royal road to riches. But the trust fund probably gives the best hedge against inflation that the average man can find. Giving wider diversification and far better management than the ordinary citizen can secure anywhere else, they can be used to fight a long delaying action against the deterioration of the dollar.

A Combination Hard To Beat

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. HILLINGS, Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. Kyle Palmer, political editor of the Los Angeles Times, which appeared in that newspaper on Sunday, July 8, 1956. This article outlines the fine service rendered by Vice President NIXON.

The article follows:

A COMBINATION HARD TO BEAT

(By Kyle Palmer)

Assuming, as most of us are, that President Eisenhower will be a candidate for reelection and will be renominated by acclamation a little more than a month hence, the only remaining doubt to be resolved is the GOP choice for Vice President.

If we are to judge by the President's own attitude, his assumption is that RICHARD NIXON will again be selected as his running mate. Obviously, when at his request the Vice President embarks upon a vitally important international speechmaking tour in sensitive areas on the eve of the Republican national convention, there is more to it than a routine goodwill tour.

Mr. Eisenhower clearly feels that Mr. NIXON is a tremendous asset to the United States and as clearly wants all concerned to share his feeling.

Why, then, is there a question concerning the Republican vice presidential nomination?

The answer to that one is that a group of GOP irreconcilables—many remaining unidentified and undiscovered—have never given up a plan to ditch NIXON when convention time rolls around.

Will this project succeed? Probably not, but the existence of such an undertaking despite the President's plainly indicated desire to have NIXON on the ticket with him is worthy of examination.

Numerous political observers, including those with a proclivity for expressing themselves in print, have in recent weeks given some attention to the NIXON situation.

One of the most interesting and perceptive approaches was made recently by our own Bill Henry, now gallivanting around the world with the Vice Presidential party.

Bill made the point that even NIXON'S severest critics admit his remarkably able service as Vice President.

Bill also, with no foreknowledge of NIXON'S present international assignment, pointed up the significant difference between such chores when handed out, for instance, to other Vice Presidents.

NIXON has in every respect been not only an official representative of the United States but in full reality the representative of national policy as determined by President Eisenhower.

Contrary to the inferences of political detractors, Mr. Eisenhower would not send into critical international situations a man who, for any reason, could not be expected to do and say the right thing.

John S. Knight, in the Editor's Notebook of the Chicago Daily News, treats the NIXON issue frankly and bluntly, asking, "Why Do GOP Strategists Dodge the Issue of NIXON?"

His question, seemingly, was prompted by action of the GOP governors recently in ignoring NIXON in their petition urging Eisenhower to run again.

Knight failed to name the strategists he had in mind and, as by no means any considerable number of GOP strategists are actually ignoring "the issue of NIXON," he may have given the anti-Nixon wing a little more importance than it deserves.

But he did hit most of the high and familiar spots, especially the "I just don't like NIXON" contingent.

On that score I feel competent to say a word or two, having tried on many an occasion to get a satisfactory answer from the man or woman taking refuge in the comment.

Those pressed for an explanation of their feelings have dodged about in their own thinking without coming forth with a sensible or satisfactory reply.

"He is too young" certainly holds no meaning; this country has never had a Vice President who has faced more tests of his ability and none who has acquitted himself more commendably.

"NIXON is too rough in his campaign tactics" is a valid criticism from the standpoint of those who have felt the impact of his campaigning. But when all the facts are assembled and considered in their true relationship, NIXON emerges more as a tough than a rough campaigner.

Harry Truman, evidently persuaded by his own ire, has done his level best to keep alive the false charge that NIXON accused him and the Democratic Party of being pro-Communist.

Even NIXON'S friends must concede that there are a few rare occasions when he has made a remark not to be cataloged as the quintessence of pure tact and sound judgment. Where exists a public man against whom a like fault cannot be charged?

Faithful friend, loyal supporter, able subordinate are descriptions of the Vice President heard oftener than any other comment.

Why, then, the "I don't like NIXON" element, which so many recognize, but which so few can explain?

Any reasonably diligent searcher for the truth, I believe, will eventually conclude that, aside from the inescapable number of individuals who have some identifiable reason for not liking NIXON, the chief body of dislikers doesn't itself know the reason.

In the main, those who say they don't like him are the victims of ramifying influences put in motion by American Communists and their collaborators or dupes. First undertaken as a campaign of derogation, and to some extent doubtless still carried as such, the word-of-mouth attack on the Vice-President has caught many unthinking and uninformed persons in its wake.

One of the most frequently repeated and least deserved of all attacks made on NIXON embodies a charge that he is anti-Semetic. Origin of this charge is partly political, partly just plain, old-fashioned reckless gossip.

It is false and vicious. By temperament as well as by the circumstances of his birth and rearing DICK NIXON is a man tolerant of his fellows, their religions, their racial and national origins, and their ways of life.

You may say with some reason that Republican leaders who, for their own purposes, may oppose NIXON for responsible political office are not misled by such rumors, gossip, and reports.

True, but some have not been above the artifice of utilizing the same when opportunity offered.

Hence you may be reasonably sure that the anti-Nixon group in the Republican Party will endeavor to discover a way to accomplish its purpose—possibly without actuallly showing its hand—at the Republican National Convention in San Francisco come next August 20.

There is one group not heretofore mentioned here and which is seldom given the recognition it deserves—that very large, representative and effective band of Americans that could without too much difficulty become known as the "I Like NIXON" society.

Once you get it alert, on the job and in motion the true position of the young Vice President may assume the proportions with which the President of the United States evidently regards it.

Despite all the planning and the plotting, the best bet for the GPO ticket in 1956 still stands: Eisenhower and NIXON. It has been, will be, a combination hard to beat.

Shadows of Coming Spectaculars

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. QUIGLEY. Mr. Speaker, on page A5513 of the CONGRESSIONAL RECORD, under my extension, appears the text of an address given on July 12 by the Honorable George M. Leader, Governor of Pennsylvania.

Governor Leader, in his remarks, cited the record of the 1952 campaign, when the Eisenhower forces drowned the issues—the sense talking of Adlai Stevenson—under a deluge of Madison Avenue huckstering.

Quoting C. D. Jackson, who, in a sudden burst of candor, stated bluntly that the mission of the Republicans was to "merchandise the hell out of" Mr. Eisenhower, the Governor predicted that "the voter will find this campaign far worse than the campaign of 1952."

It was something of a coincidence that on the very date Governor Leader was making this prediction, the Associated Press wires were carrying a dispatch from New York, quoting one of the leading Republican hucksters as announcing that every visual, physical and emotional means known to Madison Avenue would be used.

According to the Associated Press there will be press releases, saturation announcements on radio, music, movies, bicycles, balloons, banners, floodlights, streamers, helium gas—and it goes without saying, plenty of the other variety—and pretty girls in special costumes.

There is little room for issues in all this.

Instead of going to the unemployed with a program, there will be rock and roll.

Instead of telling the farmer the truth about his falling income, they will give him a barrage of balloons.

Instead of coming to the depressed pockets with a program for development, there will be a bevy of well-developed girls.

The theme of the forthcoming Republican campaign promises to be a modern version on those famous words of the grandmother of all Tories: "Let them have cheesecake."

The Associated Press article follows:

NEW YORK.—A supercharged blockbuster of color, sounds and spectacle was being readied today to stir up fervor for President Eisenhower along the main streets of America.

"We're going to use every physical, emotional and visual means of getting the message across," said C. Langhorne Washburn, director of special activities for the National Citizens for Eisenhower organization.

There'll be huge floating balloons, parades, blaring loudspeakers, moving pictures, reams of press releases, television quickies, music, rallies, pretty girls in Ike dresses and campaign buttons galore.

All this is part of a high-powered task force getting set to invade cities and towns across the country, beating campaign drums for the reelection of Eisenhower.

It's called the Eisenhower Bandwagon operation, and it's got everything from floodlights, costumes and streamer-bedecked vehicles to specially schooled crews and helium gas.

The mission, as Washburn put it: "Selling and telling."

Altogether, there'll be 6 bandwagon outfits each, including 30-ton trailer-trucks loaded with equipment, a jeep, 2 station wagons, two 40-foot, dirigible-shaped balloons and 4 bicyles.

The rolling stock is all painted in brilliant white, with red-and-blue slogans on it. Among other things the cargo includes outdoor movie units, amplifiers, power generators and campaign leaflets.

The team will hit the road Labor Day, shortly after the GOP convention August 20, and keep going 9 weeks, with plans to uncork their fanfare in about 150 communities by election day.

As part of the crowd-luring devices, each unit will have 8 pink and fancy Ike dresses, sizes 10 and 12, to be worn by locally recruited girls (the requirement: young and pretty) in parades and rallies.

The Democratic Party and the Catholic Vote

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. ASHLEY. Mr. Speaker, with the conventions of our two political parties less than a month distant, keen interest and attention is currently focused upon those who may emerge as the Democratic and Republican standard-bearers.

Most would agree, I believe, that there is considerably more interest and doubt with respect to the Democratic selections. This is true not only with respect to the Presidential nominee, but also to his running mate. Throughout the country in recent months, there has been mounting enthusiasm and speculation over the possible nomination of Senator JOHN F. KENNEDY as the vice presidential candidate on the Democratic ticket.

Few would disagree that the basis of this enthusiasm and speculation rests mainly with the outstanding attributes which Senator KENNEDY has brought to the Congress. The courage which he demonstrated during World War II as a PT commander in the Pacific has been demonstrated both in the House of Representatives and in the Senate. In a relatively short span of years, his legislative abilities have been recognized not only by his colleagues but by citizens in every part of the country.

Speculation as to Senator KENNEDY'S selection as the Democratic candidate for Vice President goes in part, at least, to the political desirability of having a Catholic at the top of a national party ticket. This subject, Mr. Speaker, was the topic of an excellent article by Mr. Arthur Krock, which appeared in the July 5 edition of the New York Times, and which reads as follows:

THE DEMOCRATIC PARTY AND THE "CATHOLIC VOTE"

(By Arthur Krock)

WASHINGTON, July 4.—A privately financed survey of the so-called Catholic vote in the United States has just been completed at the request of a few Democrats. Their purpose was to evaluate the proposition that the nomination of a Catholic on the Democratic national ticket in 1956 would operate powerfully to reverse the 1952 vote for President Eisenhower in communities with heavy Catholic populations and turn the scales toward Democratic victory.

Since Governor Lausche of Ohio is the only Catholic with important backing for the Democratic Presidential nomination, and the consensus is that his chances are slight, the emphasis of the survey is on second place. With special mention of Senator JOHN F. KENNEDY of Massachusetts, whom prominent Democrats, North and South, Catholic, President, and Jewish, have endorsed for that position, the conclusion of the survey is:

"While a Catholic Democratic Vice Presidential nominee could not recapture all of those Catholics who voted Republican in 1952, inasmuch as some had been solidly Republican for years * * * it is apparent * * * that he could regain most of them. Assume he could get no more than those "normally Democratic" Catholics who voted for Ike in 1952 * * * he would still add 132 electors to the Democratic column. When combined with the electors of the solid South this would provide a majority.

Bloc voting, for economic, racial or religious reasons, has always been a subject of dispute. That is because large voting percentages of identifiable blocs are frequently cast against candidates supposed to have special appeals to them. Thus in 1952, in communities where members of union labor and of the Catholic Church were preponderant, and large Democratic majorities in national elections had been constant, the voting statistics revealed strong support for the Eisenhower-Nixon ticket.

KENNEDY AS THE TYPE

It is this deviation which, the study concludes, would in all likelihood be corrected by the choice of a Catholic with acknowledged high standing among citizens generally. The survey most frequently uses KENNEDY to illustrate a Catholic of this caliber, but some Democrats also cite Mayor Wagner of New York City.

Many tables were compiled to support the main thesis and two are especially interesting. One comparies the estimated Catholic vote for Eisenhower in 14 States with 261 electorial votes (5 short of the required majority) with the percentage margin by which he carried these States. These comparisons follow, the first figures being the estimated Catholic vote for Eisenhower, the second his winning margin (both in percentages):

New York, 35 and 11; Pennsylvania, 36 and 6; Illinois, 31 and 9; New Jersey, 40 and 13; Massachusetts, 51 and 8; Connecticut, 48 and 11; Rhode Island, 63 and 15; California, 23 and 12; Michigan, 27 and 10; Minnesota, 23 and 10; Ohio, 21 and 12; Wisconsin, 30 and 18; Maryland, 27 and 10; Montana, 21 and 16.

(The point is that if these Catholics vote Democratic in 1956 by 1 percentage point more than Ike's winning margin in 1952 the Democrats conceivably would carry these States; furthermore, that a Catholic nominee for Vice President on the Democratic ticket would probably recapture the bulk of the Catholic percentage for Ike 4 years ago.)

The other table, credited to a University of Michigan survey, purports to give the following percentages of 1952 party voting in eight Catholic groups, "S" standing for Stevenson and "E" for Eisenhower:

Irish Catholics, S. 59 and E 41; Italian, S 56 and E 44; Polish, S 49 and E 51; first generation American Catholics, S 47 and E 53; second generation, S 58 and E 42; third generation, S 36 and E 64; fourth generation, S 54 and E 46. (The percentage division among Irish Protestants is estimated at 27 for Stevenson and 73 for the President.)

A MINIMUM OF BIAS

The fundamental concept of the survey is that Catholics generally have "voted not as union members or farmers or women or old people, but as Catholics," and that they constitute 1 plus of every 5 eligible voters, in some States 1 plus of every 2. It is estimated that this group is concentrated in big cities in populous States, and that the majorities in these cities swing enough States to decide the national election. The survey reports that tests of anti-Catholic bias in key States indicate this would be insignificant in voting percentages against a ticket with a vice presidential candidate of Kennedy's type among voters who normally would support that ticket, and expresses this conclusion:

"If Al Smith had been the Republican nominee and a dry," and "not a Tammany product" who was misrepresented as "the sterotype of the cigar-smoking, immigrant-base political boss," he would have "won the election of 1928 regardless of his religion."

The Fourth of July is an appropriate day to implant the hope that the findings as to bias and the true cause of Smith's defeat are sound.

Appropriations for Public Works

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 3, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present herewith the address of the Honorable LOUIS C. RABAUT, Congressman from Michigan, delivered to the 43d annual convention of the National Rivers and Harbors Congress held in Washington, D. C., on May 11–12, 1956. Congressman RABAUT, as an able member of the House Appropriations Committee, has studied carefully and thoroughly the projects brought before his committee, and I feel his comments on the processing of these projects have far more than the usual interest to the Members of Congress as well as to the Nation as a whole.

The address follows:

APPROPRIATIONS FOR PUBLIC WORKS

(By LOUIS C. RABAUT, Member of Congress)

It is a pleasure to accept the invitation of your president and my colleague, the Honorable OVERTON BROOKS, to come here today and discuss the scope and responsibility of the Public Works Subcommittee of the Committee on Appropriations, of which I am acting chairman.

I suppose the appropriate point at which to begin would be a listing of the Government agencies seeking funds from my group. The Public Works Subcommittee has jurisdiction over the Army Corps of Engineers, the Bureau of Reclamation, Southeastern and Southwestern Power Administration, TVA, and last, but certainly not least, the Atomic Energy Commission.

It is rather difficult to tell you, in the time allotted to me, of the amount of work the subcommittee is called upon to perform in the course of one session of Congress.

The Corps of Engineers alone has over 700 projects that must be scrutinized by the subcommittee. Some of these projects are in the earliest planning stage, others are under construction. Still others are completed and must be maintained and repaired at tremendous expense. The Bureau of Reclamation also has over 200 projects either under construction or being operated. The 43 Bonneville Power Administration transmission lines and facilities are but one small phase of the subcommittee's responsibility. The thousands of pages of testimony give ample evidence of the hours spent discussing and justifying financial commitments. Since our committee started holding hearings in March, we have heard 668 outside witnesses. These witnesses consumed the better part of 160 hours.

In addition to hearing the opinions of hundreds of witnesses, the members and committee staff perused a 3-foot high stack of correspondence and telegrams from other interested parties. Exhibits and visual aids supporting testimony and correspondence stood 5 feet high, tightly compacted.

The thought probably occurs to many as you hear of the voluminous testimony taken by the subcommittee—what primarily does a witness talk about. To make a pun, he talks about an hour. In all seriousness, however, the witness must justify to the satisfaction of the committee the expenditure of all money requested. Many times a Government agency will request a certain sum of money for a given project and be turned down cold because the subcommittee did not feel the proposed endeavor was sound or in the best interest of the American taxpayer.

We do not just sit there and give blanket endorsement to anything the executive branch might see fit to suggest. We take the attitude of I'm from Missouri—show me. I have seen some cases where Congressmen on the panel suggested an alternative that was superior to the plan proposed by a particular agency. This is the purpose of a congressional committee—to safeguard the national interest while preventing a waste of the taxpayers' hard-earned dollar. Sometimes, as I sit on the panel and listen to a proposal I consider to be ill-advised, I cannot help but think—how many Americans earning $60 to $70 a week will Congress have to tax indefinitely to pay for this project. I tell you, gentlemen, asking yourself a question like that returns you to the fundamental of representative government.

I feel that I am sent here by the people of Detroit to protect the principles of Federal Government and give the American people, all of the American people, the best possible deal for every dollar they are required to spend.

When the subcommittee is first approached regarding a project, certain basic questions must be asked—is the project actually needed? Can we get along without it? Is it momentarily sound? Is the proposed location the best possible site? How about the purchase of acreage? In other words, is the taxpayer being protected?

In the construction of a dam, for instance, there is a multitude of legal, financial, and mechanical ramifications. Dams are of many types and for various purposes. Some are multipurpose, that is, flood control, power, irrigation, and possibly navigation and recreation.

Quite often local organizations and interests desire to cooperate, with the intent of repaying a portion of the cost in return for certain rights, such as, use of water for irrigation. An equitable settlement must then be worked out with these local residents. The loaded question soon follows—what must be moved before the dam can be built. Perhaps entire towns must be relocated, miles of railroads, highways, and bridges moved at great expense. Incidentally, in the movement of railroad bridges, the Government now has a standard rate of amortization concurred in by the utilities that somewhat reduces expenditures.

I am not going to dwell further on the dislocations resulting from the construction of a dam. When the job is finished, we have power, navigation, inundation, irrigation, and irritation. It's impossible to please everyone—we do the best we can.

In closing, I would like to touch lightly on a number of other matters.

The all-important St. Lawrence seaway, a 50-year dream that will unite inland ports with world commerce, requires a great deal of planning and construction. Disastrous floods, such as we have experienced in recent months in New England and the Far West must not be allowed to recur. The Mississippi, where $60 million a year is spent just to live with the river, is a constant worry. The Tennessee Valley Authority has informed us that a serious power shortage is anticipated by 1958 unless swift remedial action is taken. The solution to the problem seems to lie in thermopower, several units of which have already been installed. Public power, with all of its pros and cons, is constantly being debated.

In the field of atomic energy, we stand on the threshold of a new era which could radically alter our mode of living.

True, we do not yet fully understand this new source of energy, but we are making giant strides. The only thing holding us back is a shortage of highly trained technicians and scientists. Much thought is being given to the possibility of granting Federal scholarships to promising young men and women interested in engineering and the sciences. Something must be done—and soon—if we are to keep abreast of other nations in technological fields.

Well, there you have—in a rather sketchy form—some idea of the Government functions our subcommittee is charged by Congress to supervise. I enjoyed addressing your group and wish the Rivers and Harbors Congress a most pleasant stay in the Nation's Capital. Thank you.

Democrats' Hopes Dashed Again

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD Gould Lincoln's column of July 14, 1956, as it appeared in the Washington Evening Star:

DEMOCRATS' HOPES DASHED AGAIN

(By Gould Lincoln)

HYANNIS, MASS., July 14.—The dust finally has been laid on the suggestion there will be any change in the Republican 1956 national ticket. It's Eisenhower and NIXON—just as it was in 1952. The Democrats, as well as all the rest of the country, are on notice. Twice the hopes of the Democrats rose that Eisenhower, the Republican who swept the country 4 years ago, would not be the GOP candidate, and twice these hopes were dashed.

Because of the President's two illnesses, the Democrats maintain he will be easier to defeat this time. They add that NIXON's renomination also will takes votes away from the Republican ticket. The President, however, has said he feels as well as ever—even better than before his recent abdominal operation. And the country is inclined to believe Eisenhower. Also, great numbers of people want to believe him.

NIXON ANSWERED CHARGES

The talk of Eisenhower's being handicapped by NIXON's presence on the ticket has been inspired by Democrats—who dislike NIXON intensely. It was NIXON, as a member of the House Un-American Activities Committee, who brought to light the evidence which finally convicted Alger Hiss. It has made him anathema to some of the Democrats. It was NIXON who, in his campaigns against the Democrats, has charged over and over again they were stupid in their appraisal of and dealings with the Communists. Their leaders have charged he called the Democrats "treasonable." Search his speeches as they will, they have never been able to prove this charge. So they now claim that his criticisms can be construed as meaning they were traitorous. Yet the Vice President on several occasions specifically said he did not charge the Democrats with being traitors.

Early this year, the Democrats indicated they would make their campaign against NIXON—after the President's heart attack, or rather because of it.

They will find, however, that they are running against Eisenhower, a President who has won the confidence of the great mass of Americans. Further, the people like Eisenhower—and the most difficult candidate to defeat is one who is liked. As for NIXON, he has made an excellent record in the many tasks assigned him by the President, both at home and abroad. In addition, the Vice

President is a hard-driving campaigner. When he takes to the stump, as he will, he will be free to answer the charges and the innuendoes which have been made against him.

MANY CHANGE VIEWS

Those Republicans who were made fearful by the Democratic charge brought against NIXON—and there were a number of them—have caught their second wind. They have come to realize that dumping NIXON would be more harmful to the Republican chances. It would have been tantamount to saying they did not expect the President to last through a second term in the White House. They know, too, that NIXON, by reason of his many assignments abroad, is thoroughly cognizant of the problems of foreign policy, and that he has been kept in close touch with the needs of national defense, and with the domestic issues.

In his campaigning through the country, in 1952 and in 1954, NIXON won many friends. It has been evident for months that the Vice President has the support of Republican leaders throughout the 48 States. If the decision were left to them, it would be the same as that of the President—that NIXON was acceptable for renomination. At one time it was suggested in some quarters that a fight against the renomination of NIXON would be launched when the Republican National Convention meets in San Francisco August 20. With the President's sign of approval, all chance of such a row seems to have disappeared.

Republican National Chairman Leonard W. Hall stands today as a political prophet without equal. Not long after President Eisenhower's heart attack, September 24, 1955, Chairman Hall declared his belief that Eisenhower would run "if he is able"—at a time when many believed that Eisenhower would step aside. He has never deviated from that prediction.

Bloody Hands

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial from the Los Angeles Examiner on Monday, July 9, 1956, discussing the Vice President's speech in Manila.

The editorial follows:

BLOODY HANDS

Vice President NIXON was needled by reporters at his Manila press conference on American aloofness toward Russia's purportedly peaceful overtures, and he threaded the needle very neatly.

Mr. NIXON was asked why America is not more conciliatory since Russia has adopted its "softer" policy.

The reference was to the current repudiation of Stalin.

His reply was that those who denounce Stalin belie their own words by continuing to do the same things for which he is denounced.

"Is the world changed simply because those who worked with Stalin now say that they disapproved of Stalin's tactics?" he asked.

"Not until they discontinue being what Stalin was."

Mr. NIXON said the peaceful professions of the Communists would have more substance if there was a higher degree of fulfillment.

"As soon as Khrushchev and the other leaders stop acting like Stalin we will have hope for peace in the world."

Even as Mr. NIXON spoke the bloody scenes in Poland offered confirmation.

Stalin himself never put down the natural aspirations of normal human beings more ruthlessly, callously, and barbarically than the Communists have done in their Polish orgy of slaughter.

Khrushchev, who dissociates himself from the crimes of Stalin, has written his own book of new crimes.

Why should it not be taken seriously, as Mr. NIXON says, that the Communist hands now being held out in the gestures of peace are bloody hands?

When those who had the guilt of Stalin persist in the old patterns, they do not offer the prospect, but merely the illusion of peace when they speak of softer policies.

Recognizing Red China

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mrs. SULLIVAN. Mr. Speaker, from time to time we have been hearing rumors to the effect that Great Britain intends to seek admission of Red China to the United Nations in place of the present Republic of China delegation, and that our own Nation, following the next election, might acquiesce in such a move.

Certainly that is not the sense of Congress or the desire of the American people. Congress itself has gone on record on this matter on numerous occasions, and our Government has also made it clear from time to time that we are not inclined to recognize the Red regime as representing the people of China.

Last night, in the Washington Evening Star, Columnist David Lawrence wrote an article on this subject entitled "Congress' Stand on Red China" which I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD. It tells how strongly many of us feel on this subject, also quoting at some length the position of the Truman administration on this same matter.

Following the article by Mr. Lawrence, I include for printing in the RECORD my own proposed congressional resolution on this subject, House Concurrent Resolution 264, which I introduced on July 12. First, Mr. Lawrence's article follows:

[From the Washington Evening Star of July 16, 1956]

CONGRESS' STAND ON RED CHINA—PRESS LARGELY IGNORES ITS OPPOSITION TO ADMISSION OF PEIPING REGIME TO U. N.

(By David Lawrence)

When the Congress of the United States by virtually unanimous vote writes into a law as important a pronouncement as the statement that it does not favor admission of the Red China Government into the United Nations, one would think this news would be widely printed in this country as well as abroad.

For some strange reason it wasn't. It's a mystery right on the doorstep of the "right to know" crusaders in the House Subcommittee on Government Operations which has lately become solicitous about the suppression—intentional or otherwise—of official news in other parts of the Government.

Here is the exact wording of section 110 in Public Law 603 as signed by the President on June 20, 1956:

"It is the sense of the Congress that the Communist China Government should not be admitted to membership in the United Nations as the representative of China."

This is an important warning to the world that both political parties in the United States have taken a firm posiion on the matter of refusing to seat Red China's government in the United Nations. Yet in London where the prime ministers of the British Commonwealth were meeting in the last week of June and the first week in July, the conference was reported by the United Press on July 2 as having decided that admission of Red China could be achieved after the November elections in the United States.

No such conclusion could possibly have been reached if the London newspapers had told the story of the action of the United States Congress earlier in June. Nothing is more calculated to produce friction between friendly nations than suppression of important news affecting their relations. But the British newspapers may have a good alibi—they probably didn't get the item from any of their American news services. So far as this correspondent can determine by a review of a few newspapers in this country, it wasn't printed here either.

The desires of Congress were expressed in the appropriation law for the Department of State for the fiscal year that began on July 1, 1956. Because it's in an appropriation act, this can be taken to mean that it is advice to the Department of State which has the responsibility of sending instructions to the representatives of this country at the United Nations Assembly.

Congress, therefore, has put the world on notice that while it may not direct foreign policy it does control the purse strings. It may well be that American appropriations for the United Nations would be cut off if despite American protests, the Red China Government were voted into the United Nations.

Opposition to the admission of Red China to the U. N. never has been a political or partisan question in this country. Perhaps the most forceful and explicit declaration on the subject that has ever been made came from the pen of Dean Rusk, Assistant Secretary of State for Far Eastern Affairs, in a speech delivered before the China Institute banquet in New York City on May 18, 1951. Mr. Rusk was at the time a subordinate of Dean Acheson who was then Secretary of State under the Truman administration. What was said then can be said to be the American policy today under the Eisenhower-Dulles administration. Mr. Rusk said:

"We cannot provide a formula to engage the unity of effort among all Chinese who love their country. But one thing we can say—as the Chinese people move to assert their freedom and to work out their destiny in accordance with their own historical purposes, they can count upon tremendous support from free peoples in other parts of the world.

"It is not my purpose, in these few moments this evening, to go into specific elements of our own national policy in the present situation. But we can tell our friends in China that the United States will not acquiesce in the degradation which is being forced upon them.

"We do not recognize the authorities in Peiping for what they pretend to be. The Peiping regime may be a colonial Russian government—a Slavic Manchukuo on a larger scale. It is not the Government of China.

It does not pass the first test. It is not Chinese. It is not entitled to speak for China in the community of nations. It is entitled only to the fruits of its own conduct—the fruits of aggression upon which it is now willfully, openly, and senselessly embarked.

"We recognize the National Government of the Republic of China, even though the territory under its control is severely restricted. We believe it more authentically represents the views of the great body of the people of China, particularly their historic demand for independence from foreign control. That government will continue to receive important aid and assistance from the United States. Under the circumstances, however, such aid in itself cannot be decisive to the future of China. The decision and the effort are for the Chinese people, pooling their efforts, wherever they are, in behalf of China.

"If the Chinese people decide for freedom, they shall find friends among all the peoples of the earth who have known and love freedom. They shall find added strength from those who refuse to believe that China is fated to become a land of tyranny and aggression and who expect China to fulfill the promise of the great past."

Nothing has been said since that expresses more eloquently or more exactly the American position, which is that admission of Red China into the U. N. means a discouragement to freedom and an encouragement to aggression and tyranny in the world.

Mr. Speaker, following Mr. Lawrence's article, I submit my resolution, House Concurrent Resolution 264, as follows:

[84th Cong. 2d Sess.]

House Concurrent Resolution 264

In the House of Representatives, July 12, 1956, Mrs. SULLIVAN submitted the following concurrent resolution; which was referred to the Committee on Foreign Affairs:

"Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the Chinese Communists are not entitled to and should not be recognized to represent China in the United Nations."

Mount Carmel Guild Restores Victims of Alcoholism

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I would like to insert the following feature article, from the Sunday July 15 edition of the Paterson (N. J.) Sunday Eagle. In it, Staff Writer Norm Mates has told the story of the triple-barreled attack on alcoholism, through faith, medical care, and rehabilitation, that is being carried out by the Mount Carmel Guild of the Paterson, N. J., Diocese, and Father William Wall, the dedicated priest who administers the program.

JUST GIVEN A CHANCE—MOUNT CARMEL GUILD RESTORING VICTIMS OF ALCOHOLISM

(By Norm Mates)

Alcoholism is responsible for the majority of cases on the calendars of every municipal court. It sets some men in an emotional state where they commit serious crimes, but on a larger scale it makes men drunk and incapable, even vagrants—bringing them before a judge who is helpless to cure them. This has been shown by the hundreds upon hundreds of victims of the disease who have been sent to county jail only to return on similar charges, in some cases as soon as 1 or 2 hours later.

On January 10, 1955, through the concern of Bishop James A. McNulty, of the Paterson diocese of the Roman Catholic Church, Mount Carmel Guild was established on Straight and Oak Streets for the treatment and rehabilitation or what might be termed rebirth of the helpless victims of the alcohol habit. November 7 of last year the Mount Carmel Guild Hospital was also created and equipped for a similar purpose.

Father William Wall, who had had considerable experience with alcoholic cases previously was asked to serve as director by the bishop. A more devoted man could never be found.

A large 4-story factory at the Straight Street site was acquired by the diocese and after rehabilitation by Father Wall and some of the early patients, the looms, grease, and other factory dirt was removed and the building renovated. Safety devices were installed and precautions taken and there was cast the seed which is destined to rescue the lives of thousands of broken and lonely souls, most without homes and jobs.

The Mount Carmel Guild is entirely self-supporting. It is not aided by any other public or private agency. Father Wall has declared, "It is the American tradition to be self-supporting and we only ask the chance."

Alcoholics come from New York State, Connecticut, Pennsylvania, Massachusetts, and even North Carolina to the center. It is the only such unit in the country possessing a hospital and rehabilitation center under a single roof. Father Wall's and the Guild's only interest is that those patients accepted be alcoholics—alcoholics sincerely interested in breaking the habit of drinking intoxicants. There is no restriction on from where the man may come or of what religion he is.

In conducting its self-supporting program through the contributions of no longer desired household items, clothing, or actually most any product, including waste paper, rags, and waste metal, the Mount Carmel Guild also serves a second purpose—that of placing the men in jobs for which they are responsible. This work aids them to feel useful once again and regain their self-respect.

There are no hired personnel in the Mount Carmel Guild center, although in the hospital there are Miss Theresa M. Rohan, R. N., supervisor; Miss Beatrice Gillen, R. N., assistant supervisor, and three other nurses, as well as Drs. David Canaban, William Morracco, and Carmen O'Orio, consultants.

The hospital and center together has set a national pattern and is being studied and copied by alcoholics groups throughout the country.

Patients at the hospital are those with homes who admit themselves for a 5-day treatment, for which they are assessed $75, if they can afford to pay. The alcoholic is permitted no visitors, except members of Alcoholics Anonymous. Neither is he permitted to return a second time if he began drinking after he left.

The average time recommended for treatment of homeless men at the center is 3 months, although they are free to come and go when they like.

While it is not possible to tell exactly how successful the program has been in curing in the short time it has been in operation, Father Wall points with pride to the number which attend the Alcoholics Anonymous Alumni meetings on the last Saturday of each month. These are all former guests at the center and at the hospital.

Meetings open to the public are held each Tuesday evening by the AA chapter, while on Thursday evenings it is held for the men of the center only.

While 92 men are presently under treatment at the center, a number around 1,000 have probably been treated during the 18-month period. A total of 387 have undergone treatment at the hospital since its opening in November.

Father Wall notes, humorously, that the Mount Carmel Guild Building stands on the original Graham Brewery site, as a successor, and further that the unit devoted to making men go straight after overindulging in alcohol through their lives is located on Straight Street.

He points out that the project would not be possible without Bishop McNulty, his understanding and love for his fellow man, which prompted establishment of Mount Carmel Guild.

Father Wall notes that he loves his work in behalf of his fellow man and is thankful for the privilege of serving at Mount Carmel.

Mount Carmel today stands as a bulwark against alcoholism, in the face of failure of penal courts to aid confirmed alcoholics.

Compulsory Inspection of Poultry for Wholesomeness

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 17, 1956

Mrs. SULLIVAN. Mr. Speaker, the Poultry Subcommittee of the House Committee on Agriculture today opened hearings on legislation to require Federal inspection of poultry and poultry products for wholesomeness, and it was my great privilege to appear as the first witness.

As sponsor of H. R. 11800, which would amend the 50-year-old Meat Inspection Act to provide compulsory inspection of poultry in the same manner as we require inspection of the red meats, I am anxious to see legislation on this subject enacted this year. As I told the House on June 18, at the time I introduced H. R. 11800, diseased and unwholesome poultry has been a major source of food infection and has caused a number of deaths in the poultry processing plants.

Under unanimous consent, I submit the statement which I delivered before Chairman POLK and the other members of the Poultry Subcommittee today, followed by the text of the Sullivan bill, H. R. 11800, as follows:

COMPULSORY INSPECTION OF POULTRY FOR WHOLESOMENESS

TESTIMONY BY CONGRESSWOMAN LEONOR K. SULLIVAN, OF MISSOURI, BEFORE POULTRY SUBCOMMITTEE OF HOUSE COMMITTEE ON AGRICULTURE ON H. R. 11800, BY MRS. SULLIVAN, TO REQUIRE COMPULSORY INSPECTION FOR WHOLESOMENESS OF POULTRY AND POULTRY PRODUCTS, TUESDAY, JULY 17, 1956

Chairman POLK and members of the subcommittee, I appreciate very much this opportunity to appear as your first witness on the various bills before you to require Federal inspection of poultry and poultry products for wholesomeness. It is extremely encouraging to me that you are taking up this issue with the intention of recommending legislation in this session, and I sincerely hope we can get a good bill through. I understand the Senate Committee on Agriculture intends to meet tomorrow in executive session to con-

sider bills on this same subject, so it is conceivable we can enact legislation before adjournment. I certainly hope so.

Let me say first that I know how busy all of the members of this subcommittee are in these closing days of the session. I am similarly pressed for time, with so much to do in such a short period yet remaining of this session, and so I have no intention of taking up unnecessary time here today. I do not think I have to tell you in great detail why we must have compulsory inspection of poultry. The members of the subcommittee are as familiar with the problem as I am. What concerns us all is finding the most practical and effective solution.

RESEARCH MATERIAL APPEARED IN JUNE 18 CONGRESSIONAL RECORD

As the members of the subcommittee know, I went into great detail in the remarks I made in the House on June 18, at the time I introduced H. R. 11800, explaining why legislation was necessary, and I do not want to take time to repeat that material this afternoon. I do think it should be made part of the record of this hearing, however, and so I ask that it be included at the conclusion of my oral testimony—that is, the remarks I made in the House on June 18, along with the research material presented at that time and inserted in the CONGRESSIONAL RECORD. If it is done in that way, it will save us much time and still provide a complete record for those interested and concerned in this important issue.

What I want to do in the time here this afternoon is to explain, then, not why we must have poultry inspection—for I believe that everyone connected with the poultry industry will now acknowledge that we must have additional consumer protections or the poultry industry will suffer from serious consumer resistance—but rather, what I want to do is to discuss the various proposals for providing an inspection program and to explain why I think my bill, H. R. 11800 is the best approach.

Let me give you briefly, the high points of H. R. 11800. To put it as concisely as possible, my bill would amend the Meat Inspection Act in every relevant provision to require that poultry and poultry products be inspected in exactly the same manner in which—for 50 years—we have been inspecting the red meats.

NO LEGAL PITFALLS IN USE OF MEAT INSPECTION ACT

It does not set up any new rules, regulations, definitions, procedures, or other legal pitfalls. By "pitfalls," I mean provisions which would set off endless litigation and thus prevent prompt and effective application of the new law.

The Meat Inspection Act is exactly 50 years old. It grew out of the same circumstances a half century ago as the demand today for poultry inspection laws—that is, the practices of unscrupulous operators who defied the public good and sent diseased and unwholesome meats into the channels of commerce.

Some of the information now available on the kind of diseased and unwholesome poultry products which have been shipped in interstate commerce is so sickening and revolting I do not want to go into it here. I think you are all familiar with this problem. I know you join me in wanting to see the public protected. As members of the Agriculture Committee, you also want to make sure that the legitimate poultry raisers and processors are protected from the poison-peddlers in the trade.

I have given much thought to this problem ever since officials of the Meat Cutters Union first called my attention to the health hazards many of their members were experiencing in the poultry plants. The more I went into this problem, the more it became my conviction that poultry should be inspected in exactly the same way as the red meats. The meat inspection program has been remarkably successful—one of the most successful of all Government programs—and has been a great thing both for the consumer and the livestock and packing industries.

While it is true that meat can be spoiled in transit, or in improper handling after it leaves the packinghouse, nevertheless we know that when it left the plant—with the Government stamp on it—it was pure and wholesome and not diseased and dangerous to eat.

PURPOSE IS PRIMARILY TO PROTECT CONSUMING PUBLIC

I want to see us enact a law which will give us the same assurance on poultry.

As my bill states, its purpose is "to protect the general consuming public."

I think that is first and foremost, but there are additional factors also, and they are:

"To protect the health of persons engaged in the processing and distribtuion of poultry and poultry products, to prevent the spread of disease through shipments in interstate and foreign commerce of unwholesome poultry and poultry products, and to promote the wider use of poultry through assurance to the consuming public of its wholesomeness and freedom from disease, thus assisting agriculture and the food marketing industries in expanding their sales and augmenting their important contributions to our economic system."

I hope the members of this subcommittee will agree with me on the objectives I have cited, and also on their relative order—that is, that the health of the public comes first. I say that because I know that some of the other bills before you, while aimed at protecting the public, of course, nevertheless seem to stem primarily from the desire to protect the industry from unscrupulous competitors. I want to do that, too; but the first thing, as I said, is to protect the public. If we can agree on that, then I believe my bill, H. R. 11800, best suits the purpose.

It provides for compulsory inspection of all poultry and poultry products in interstate commerce, and also in intrastate commerce if it burdens or affects interstate commerce. I think the industry itself is anxious to see both covered. Now as I understand it, the intrastate inspection could be carried out under working relationships between the Federal service and State or local authorities.

ANTE-MORTEM INPECTION MADE MANDATORY

My bill makes ante-mortem inspection compulsory—that is, inspection before slaughter as well as after. This is the only way, according to information which I have received, that we can assure the health and wholesomeness of the poultry involved. I know that many of the industry spokesmen oppose this on the grounds that it would make processing slower or more costly. But believe me, if we are going to have an inspection system, let's not have half a system. All red meat animals are inspected both before and after slaughter. Under the meat-inspection law this is discretionary with the Secretary of Agriculture, but for years it has been mandatory by regulation. My bill amends the basic law to make it mandatory for the red meats and for poultry.

Otherwise, in every particular, H. R. 11800 adopts exactly the existing provisions of the meat inspection law. For 50 years, with only occasional amendment, this law has held up remarkably well. It can apply equally well to poultry.

The Department of Agriculture has made comments on this legislation in connection with the so-called poultry industry bill which is also before you. That bill would delay enforcement of poultry inspection for 2 years, and then permit other exemptions and delays for 2 additional years. That would mean we would not have general compulsory inspection until 1960. That is too long a wait—too late. My bill would provide 6 months to bring about conformance. I do not think that is too soon.

If you will note the Department's comments on the industry bill, it has in instance after instance suggested changes to bring the bill more generally into conformance with the Meat Inspection Act. I say, rather than set up an entirely new law and procedure for poultry, let us use the perfectly good law we now have for meat inspection, and let it be extended logically to include poultry. The Department, in effect, endorses just about all the proposals in my bill, by its criticism of the industry bill. In other words, we can solve this whole problem just by adapting the meat-inspection law to include poultry.

POULTRY INDUSTRY BILLS FAIL TO MEET NEED

The poultry industry says that poultry competes with the red meats and therefore should not be placed under the meat-inspection branch. My bill does not require that poultry inspection be in the meat-inspection branch, although I certainly think that is the logical place for it, rather than in a sales promotion branch of the Department. But I do provide the Secretary with discretion on this. However, there is no discretion to provide different standards for poultry than for the red meats. They should be treated alike. After all, beef and pork compete for business, and so does lamb. The meat inspectors are not promoting one type of meat over another; they are only seeking to make sure that the meat we serve in our homes, or which is served to us in restaurants, is wholesome and not diseased and insanitary.

My criticism of the poultry industry bill is that while it seeks to show a desire to conform to good inspection laws, it provides so many delays, so many modifications and so many relaxations and exemptions that I am afraid it would do us little good for a long time to come. For the immediate future it would merely shift to the Federal Government the cost of the voluntary program which is presently paid by industry. We should pay for the inspection service—but we should get our money's worth—and have real and effective and full inspection—in the immediate future, rather than 4 years from now.

I urge you to study my bill from this standpoint.

THE SULLIVAN BILL, H. R. 11800

And now, Mr. Speaker, I submit a copy of my bill, H. R. 11800, as introduced June 18, as follows:

[84th Cong., 2d sess.]

H. R. 11800

In the House of Representatives, June 18, 1956, Mrs. SULLIVAN introduced the following bill; which was referred to the Committee on Agriculture:

"A bill to amend the Meat Inspection Act (34 Stat. 1260, as amended) and the Tariff Act of 1930 (46 Stat. 689, sec. 306) to require compulsory inspection for wholesomeness of poultry and poultry products.

"Be it enacted, etc., That the Congress of the United States finds that poultry and poultry products are being marketed through the channels of interstate and foreign commerce without adequate inspection to protect the public against poultry and poultry products which are diseased, unsound, unhealthful, unwholesome, or otherwise unfit for human food.

"To protect the general consuming public, to protect the health of persons engaged in the processing and distribution of poultry and poultry products, to prevent the spread of disease through shipments in interstate and foreign commerce of unwholesome poultry and poultry products, and to promote the wider use of poultry through assurance to the consuming public of its wholesomeness

and freedom from disease, thus assisting agriculture and the food-marketing industries in expanding their sales and augmenting their important contributions to our economic system, the following amendments are made to the Meat Inspection Act (34 Stat. 1260), as amended, and the Tariff Act of 1930 (46 Stat. 689, sec. 306) giving the Secretary of Agriculture power to inspect, condemn, or regulate any shipments of poultry in interstate or foreign commerce, or any shipment thereof which directly burdens, obstructs, or affects interstate or foreign commerce in such commodity.

"SEC. 2. The first paragraph of the act of March 4, 1907 (34 Stat. 1260; 21 U. S. C. 71), authorizing inspection of cattle, sheep, swine, and goats before slaughter is amended to require such ante mortem inspection of cattle, sheep, swine, goats, and poultry, as follows:

"(a) By striking out the phrase 'meat or meat products' and inserting 'meat or poultry, and meat or poultry products';

"(b) By striking out the words 'at his discretion may' following the words 'Secretary of Agriculture' and inserting the word 'shall';

"(c) By striking out the phrase 'cattle, sheep, swine, and goats' wherever it appears, and inserting 'cattle, sheep, swine, goats, and poultry';

"(d) By adding to the phrase 'any slaughtering, packing, meat-canning, rendering, or similar establishment' the words 'or poultry-processing plant';

"(e) By striking out the phrase 'the meat and meat-food products thereof are to be used in interstate or foreign commerce' and inserting 'the meat or poultry or poultry pieces, and meat or poultry food products thereof are to be used in interstate and foreign commerce';

"(f) By adding at the end of said paragraph '*Provided*, That at his discretion the Secretary of Agriculture may also regulate any shipments of poultry or poultry products which directly burden, obstruct, or affect interstate or foreign commerce.'

"SEC. 3. The second paragraph of the act of March 4, 1907 (34 Stat. 1260; 21 U. S. C. 72), dealing with post mortem inspection of carcasses, labeling and marking, destruction of condemned carcasses, and reinspection, is amended:

"(a) By striking out the phrase 'cattle, sheep, swine, and goats', wherever it appears, and inserting 'cattle, sheep, swine, goats, and poultry';

"(b) By adding to the phrase 'any slaughtering, meat-canning, salting, packing, rendering, or similar establishment' the words 'or poultry processing plant';

"(c) By adding after the words 'and carcasses and parts thereof of all such animals', wherever they appear, the words 'or poultry';

"(d) By adding 'or poultry-processing plant' after the words 'any such establishment' and 'any establishment' in the clauses dealing with removal of inspectors from establishments failing to comply with requirements hereunder.

"SEC. 4. The third paragraph of the act of March 4, 1907 (34 Stat. 1261; 21 U. S. C. 73), dealing with the examination of carcasses brought into slaughtering or processing establishments, and of meat food products issued from and returned thereto, is amended:

"(a) By striking out the phrase 'cattle, sheep, swine, and goats' and inserting 'cattle, sheep, swine, goats, and poultry';

"(b) By striking out the phrase 'meat or meat products' and inserting 'meat or poultry, or meat or poultry products';

"(c) By adding to the phrase 'any slaughtering, meat-canning, salting, packing, rendering, or similar establishment' the words 'or poultry processing plant';

"(d) By striking out the phrase 'treated and prepared for meat food products' and inserting 'treated and prepared for meat or poultry food products.'

"SEC. 5. The fourth paragraph of the act of March 4, 1907 (34 Stat. 261; 21 U. S. C. 74), dealing with the powers of meat inspectors in approving sound, healthful, and wholesome products and in condemning and causing the destruction of unsound, unhealthful, and unwholesome products, is amended:

"(a) By striking out the phrase 'meat food products' wherever it appears and inserting 'meat or poultry food products';

"(b) By adding to the phrase 'any slaughtering, meat-canning, salting, packing, rendering, or similar establishment' the words 'or poultry processing plant';

"(c) By striking out the phrase 'meat or meat food products' and inserting 'meat or poultry, or meat or poultry food products';

"(d) By striking out the phrase 'condemned meat food products' and inserting 'condemned meat or poultry food products.'

"SEC. 6. The fifth paragraph of the act of March 4, 1907 (34 Stat. 1261; 21 U. S. C. 75), dealing with labeling requirements, is amended:

"(a) By striking out the phrase 'meat or meat food products' in the four instances where it appears, and inserting 'meat or poultry, or meat or poultry food products.'

"SEC. 7. The sixth paragraph of the act of March 4, 1907 (34 Stat. 1262; 21 U. S. C. 76), governing sanitary inspection and regulation of the premises of slaughtering and packing establishments, and rejection of products of unsanitary establishments, is amended:

"(a) By adding to the phrase 'any slaughtering, meat-canning, salting, packing, rendering, or similar establishment' the words 'or poultry processing plant';

"(b) By striking out the phrase 'cattle, sheep, swine, and goats' and inserting 'cattle, sheep, swine, goats, and poultry';

"(c) By striking out the phrases 'meat and meat products' and 'meat or meat products' and inserting 'meat or poultry, or meat or poultry food products.'

"SEC. 8. The seventh paragraph of the act of March 4, 1907 (34 Stat. 1262; 21 U. S. C. 77), permitting inspections during the nighttime as well as during the daytime, when slaughtering is conducted during the nighttime, is amended: by striking out the phrase 'cattle, sheep, swine, and goats' and inserting 'cattle, sheep, swine, goats, and poultry.'

"SEC. 9. The eighth paragraph of the act of March 4, 1907 (34 Stat. 1262; 21 U. S. C. 78) dealing with transportation of carcasses, meat or meat food products not properly inspected and marked, is amended:

"(a) By striking out the phrase 'meat or meat food products' and inserting 'meat or poultry, or meat or poultry food products';

"(b) By adding at the end of said paragraph '*Provided*, That nothing in this section shall preclude the Secretary of Agriculture from regulating shipments of poultry or poultry products which directly burden, obstruct, or affect interstate or foreign commerce.'

"SEC. 10. The 17th paragraph of the act of March 4, 1907 (34 Stat. 1264; 21 U. S. C. 87) dealing with transportation or sale of meat or meat food products not complying with the inspection laws, is amended:

"(a) By striking out the phrase 'meat or meat food products' wherever it appears, and inserting 'meat or poultry, or meat or poultry food products';

"(b) By adding to the phrase 'any slaughtering, meat-canning, salting, packing, rendering, or similar establishment' the words 'or poultry processing plant.'

"SEC. 11. The 19th paragraph of the act of March 4, 1907 (34 Stat. 1264; 21 U. S. C. 89), dealing with the appointment, duties, and regulations governing inspectors, is amended:

"(a) By striking out the phrase 'cattle, sheep, swine, and goats' and inserting 'cattle, sheep, swine, goats, and poultry';

"(b) By striking out the phrases 'meat and meat food products' and 'meat and meat food products' and inserting 'meat or poultry, or meat or poultry food products';

"(c) By striking out the words 'meat food products' wherever they appear and inserting 'meat or poultry food products.'

"SEC. 12. The 21st paragraph of the act of March 4, 1907, as amended (34 Stat. 1265, as amended by 52 Stat. 1235; 21 U. S. C. 91) exempting certain farmers, retail butchers and retail dealers from the inspection provisions of the Meat Inspection Act, is further amended by adding the following subsection thereto:

"'(d) the Secretary of Agriculture is hereby authorized to establish the basis on which certain categories of poultry raisers, retail poultry butchers, and retail poultry dealers are exempted from the inspection requirements of this act: *Provided*, That these exemptions shall be based on maximum volume limitations which are fair and reasonable in relation to other exemptions in this section: *And provided further*, That such exempt poultry raisers, retail poultry butchers and retail poultry dealers shall be subject to the provisions of the second paragraph of subsection (c) above for violations of the requirements of this act.'

"SEC. 13. The authorization included in the act of June 30, 1906 (34 Stat. 679, as amended by 48 Stat. 1225; 21 U. S. C. 95) is amended:

"(a) By striking out the phrase 'cattle, sheep, swine, and goats' and inserting 'cattle, sheep, swine, goats, and poultry';

"(b) By striking out the phrase 'meat and meat food products' and inserting 'meat or poultry, and meat or poultry food products.'

"SEC. 14. The act of June 5, 1948 (62 Stat. 344; 21 U. S. C. 98) providing for payment of costs of the inspection service by the United States, is amended by striking out the phrase 'meat and meat food products' and inserting 'meat and poultry, and meat and poultry food products.'

"SEC. 15. Section 306 of the Tariff Act of 1930 (46 Stat. 689; 19 U. S. C. 1306) dealing with the importation of meat and meat products is amended:

"(a) By inserting the words 'or poultry' in subsection (b) thereof after the words 'meat' or 'meats' wherever they appear;

"(b) By striking out the phrase 'cattle, sheep, and other domestic ruminants, and swine' in subsection (c) thereof, and inserting 'cattle, sheep, and other domestic ruminants, poultry and swine'; and in the same subsection (c) thereof, inserting after the word 'meats' the words 'or poultry.'

"SEC. 16. The compulsory poultry inspection provided for by this act shall commence on the first day of the 6th month after enactment hereof."

Military Potential of Communist Poland

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 13, 1956

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein an article entitled "Military Potential of Communist Poland," by Richard F. Starr, Ph. D., professor of political science at Harding College, Arkansas, which outlines the efforts of the Soviet to indoctrinate the Polish Army with Marxist principles.

It shows the extent to which the Soviet has gone to enslave the entire Polish na-

tion by brutal military controls. Ironically enough, the controls were effected in large measure by forcing native Poles into the armed services.

The recent outbreak in Poznan indicates that the results have not been favorable for the Communists. The Poles are unalterably and bitterly opposed to everything Communist. With few exceptions, they will not cooperate with their Marxist rulers. They are committed to the cause of freedom and liberation and they will never willingly wear the yoke that has been placed around their necks, and will ever seek to cast it off.

In the not too distant future, we hope and pray that the Poles will find the means to remove their puppet government and reclaim their cherished independence, or that this Government, leading the free world, as it should in this and other instances affecting oppressed peoples, will secure an agreement from the Soviet to liberate the gallant Poles and other peoples similarly situated as the result of modern tyranny.

Liberation of the oppressed is one of the greatest issues confronting us in the world today. It is the duty of all true Americans, not only to support liberation, but to urge this Government to take such measures as may be necessary to insure it and, thus, free millions of enslaved peoples from the shackles of despotic communism.

The article follows:

MILITARY POTENTIAL OF COMMUNIST POLAND

(By Richard F. Staar, Ph. D.)

(EDITOR'S NOTE.—The views expressed in this article are the author's and are not necessarily those of the Department of the Army or the Command and General Staff College.)

The importance of contemporary Poland stems perhaps less from the size of her territory and population than from her geographic location, athwart the historical invasion route across northern continental Europe. In this latter capacity the country will play a key role in any future conflict or settlement between East and West. Therefore, Communist Poland should be known. However, this article will cover only a narrow portion of this vast subject field, namely the dominant influence of the U. S. S. R. on the Polish Army and the application of the Soviet political pattern to Poland.

The principal policies of the Polish Communists in the field of national defense in 1955 were rearmament and the political education of the soliders in the armed forces. Polish popular reactions to these policies cannot be ascertained but are probably negative. Since the puppet government's intention is to stand side by side with the Soviet Union, the attitude of the population would probably hinge upon its feelings regarding the U. S. S. R. The fact that officers are being recruited from among the working and peasant classes provides considerable social opportunities for individuals from these strata. This could contribute to bringing about a feeling of gratitude and allegiance to the present Polish Communist Government on the part of these individuals themselves as well as thier friends and relatives.

The law on the current 6-year plan (1950–55) specifically provides for a considerable expansion in the defensive power of Poland by means of an increase in the general productive potential and the development of a special defense industry. This same law expresses its preoccupation with improving military indoctrination and supplies:

"In order to raise the ideological level of our mililitary cadres, it is necessary to train them in the principles of Marxism and Leninism, [encourage them to] read and study the teachings of Stalin, and assimilate the Soviet sciences and art of warfare.

It is necessary for the [army] command to strengthen the dictorate of the army's supply organization and for the [Communist] Party to strengthen the army's political indoctrination program [with better personnel]."

The individual responsible for the political education in all military units is the deputy commander. He directs the activities of both the Polish United Workers' Communist Party and the Union of Polish Communist Youth Organizations in the army. Party members are considered to be the real center of party-political work among the enlisted men. A special military-political academy has been established to train officers for political indoctrination work in the armed forces.

The basic duties of a Polish soldier are incorporated in his oath of allegiance. In the middle of 1950 the legislature passed a law introducing a new version of the military oath which is notable for its lack of any reference to God. The new text speaks only of allegiance to people's Poland and the preservation of peace by standing indomitably beside the Soviet Army and the other allied armies. The basic training manual entitled "Regulations for Internal Service in the Polish Army" was announced by National Defense Minister (former U. S. S. R. Marshal until he was loaned to Poland in 1949) Konstantin Rokossovski in early 1950. It is admittedly copied from that in use by the Soviet armed forces.

POLITICAL EDUCATION

Political education of the youth is also conducted in preparation for military service by means of a paramilitary organization called Service to Poland. Established by law, membership in this organization is compulsory for boys and girls above the age of 16. Despite the emphasis on political indoctrination, no real evidence has been uncovered to indicate that U. S. S. R. authorities in 1955 considered the Polish armed forces reliable in a war with the West. The Soviets may, however, possibly feel that control over the Polish Army is sufficiently tight to ensure its useability as rear echelon units.

SOVIET-SPONSORED FORCES

The original Soviet-sponsored Polish Army was recruited from among those Poles taken to the Soviet Union during the period of the Hitler-Stalin pact of 1939–41 (estimated at almost 1.7 million persons). While these Poles survived forced labor and the genocide of certain elements, especially Polish officers, they were not able to join the Polish units organized by Lt. Gen. Wladyslaw Anders. The Anders' army was evacuated from the southern part of the Soviet Union in early 1943 by the British to fight Axis forces in North Africa and later in Italy.

The Polish troops which fought the Germans on the eastern front were commanded by Col. Zygmunt Berling who had served as a regular Polish Army officer prior to 1939. He led these Soviet-sponsored forces from their inception in May 1943 until the time when the Communist-controlled Polish Committee of National Liberation installed itself at Lublin in July 1944. At this time command passed into the hands of Michal Rola-Zymierski, a former Polish general removed from the army in 1927 and sentenced to prison for embezzlement. Rola-Zymierski was subsequently made a marshal and head of the national defense department in the Communist government of Poland. He was in turn replaced early in November 1949 in both positions by the U. S. S. R.'s Rokossovski.

The latter is not the first Soviet officer to have held a high position in the Soviet-sponsored Polish armed forces. In order to give a semblance of legality to the infiltration of Russians into the Polish Army during World War II, the Presidium of the U. S. S. R. Supreme Soviet in the middle of 1944 granted by decree to Soviet citizens the privilege of formally renouncing their U. S. S. R. allegiance and applying for Polish citizenship. At one time there are reported to have been up to 40 generals and 15,000 other Soviet officers in the Polish Army.

THREE PERCENT OF POPULATION

The people's army of Poland is based upon compulsory military service and reportedly numbers approximately 750,000 men in time of peace, which is almost 3 percent of the total population. Only a small fraction of this number is probably in the regular army, while the remainder consists of security forces and quasi-military units. About 235,000 youths reach military age each year.

The chairman of the State Council is supreme commander of the national armed forces, according to the 1952 constitution. In time of war he appoints a commander in chief who is nominated by the National Defense Minister. In reality, this is only a facade, and there is no civilian control exercised over the Polish Army, not even by the Communist government. The de facto power in military affairs most certainly is wielded not by Aleksander Zawadzki (chairman of the State Council since 1952) but by National Defense Minister, Marshal Rokossovski, who in turn receives directives from Moscow.

RESPONSIBILITIES

The Ministry of National Defense in Poland is nominally responsible for all problems connected with the defense of the state. These are in general concerned with planning, organization, and disposition of troops during peace and war. Included are universal military training and reserve training as well as planning and supervision over military schooling and political education work for all officers, noncommissioned officers, and enlisted men. Other aspects involve training in tactics, research toward improving weapons and technical equipment, and also exploitation of scientific and technological achievements for national defense. No less important are the supervision over the sanitary and veterinary services, supply and equipment for troops, and the preparation of reserves in personnel.

The top echelon organization of the National Defense Ministry includes a minister, four deputies, a General Staff, and a Main Political-Education Board. The National Defense Minister issues all orders and directives. The First Deputy directs the general activities connected with education in citizenship and politics as well as morale of troops. He is also Chief of the General Staff. The latter body is responsible for all problems concerned with planning for defense, schooling higher level commanders and staffs, and preparation of adequately trained scientific and research personnel. It coordinates the work of different categories of troops, establishes and transmits operational and tactical fundamentals of doctrine to those preparing military literature, and studies the exploitation of scientific and technological achievements for the needs of the armed forces.

The responsibilities of the Second Deputy Minister are in the fields of organization and training. The Third Deputy heads the Main Political-Education Board and directs the entire political education system in all branches of the armed forces. The Fourth Deputy Minister for rear services holds the position of quartermaster general. His work pertains to supplies of food, uniforms, and finances, sanitary and veterinary

problems, and quarters and military construction.

As already indicated, the Third Deputy Minister for National Defense is concurrently chief of the Main Political-Education Board of the Polish armed forces (GZPWP). Principal directives for the activities of GZPWP are formulated by the Communist Party, and the board functions as the military section of the party's secretariat. Liaison between the army and the party is effected through Brig. Gen. Kazimierz Witaszewski who is currently the Third Deputy Defense Minister and a member of the party central committee.

POLITIAL ADMINISTRATIONS

Subordinate to the Main Political-Education Board are the political administrations for the various branches of the armed services and the military district commanders. These in turn are superior to party commissions in each armed forces division. The latter were established in early 1951 upon the demand of division conferences.

The next level in the organization of the political education system comprises the primary party organizations in the individual regiments. Such cells are directed by trained party secretaries, who are also officers, with the military rank of deputy regimental commander. Each secretary is assisted by a party committee, subdivided into sections and staffed with propaganda instructors. These men participate in maneuvers, give lectures, and their task is to set an example in discipline and training.

Still lower organizational units for political indoctrination are to be found on the battalion and company levels. Officers in charge of this work, especially on the company level, have closer contact with their men than is true of the higher echelons. They perform their activities in person, having as aides noncommissioned officers who are trained in special courses as agitators.

The agitator is supposed to approach the rank and file soldiers as a comrade and not as a superior. The political education he attempts to instill is supposed to be conducted in the form of persuasion and not by means of military commands. Special dossiers are maintained by the political officer in charge of each company, and they are a repository for reports on all enlisted men and officers. These reports are periodically brought up to date by the agitators. Thus each soldier undergoes individual molding in the required form and framework.

The training of political officers takes place in three different types of schools: basic, advanced, and academic. The lowest level of political training is provided by the main school for political officers at Lodz. This course lasts 2 full years, and graduates are qualified to work at company levels. They receive military training together with the political schooling. Advanced training takes place at the higher school for political officers in Rembertów near Warsaw. Graduating classes are assigned to battalions.

MILITARY-POLITICAL ACADEMY

The Military-Political Academy, named after Feliks Dzerzhinski (a Polish nobleman by birth, he was founder and first head of the Bolshevik secret police, the Cheka, now called the Soviet Ministry of Internal Affairs (MVD)) was established in Warsaw by the Polish Communist Party's central committee and is avowedly patterned after the Lenin Military-Political Academy in Moscow. The statute of the Dzerzhinski Academy in Poland defines its tasks as being:

"The training and preparation of officers for posts in the armed forces, which require higher military and political studies, and for scientific work in the field of Marxist-Leninist military and political knowledge."

The academy in Warsaw is under the overall supervision of the Ministry for National Defense but is directly administered by the Main Political-Education Board of the Polish Armed Forces.

In addition to having the prerequisites for entrance to a university, candidates for admission to the "Dzerzhinski" Military-Political Academy must be regular commissioned army officers who have been graduated from an officer candidates' school. In some cases of an exceptional nature, individuals undergoing universal military training are permitted to enter the academy. However, such candidates must pledge to enter the regular army as a career upon graduation from the academy.

The tasks of political officers, schooled at the academy, were made plain by Brig. Gen. Marian Naszkowski (at the time head of the Main Political-Education Board) in a speech to trainees at the academy:

"Basing ourselves on the experience of the Soviet Army * * * we should constantly be perfecting methods for shaping the political consciousness of our troops, deepening patriotism and internationalism * * * arousing hatred for the enemy forces of imperialism, arousing revolutionary vigilance."

The aim is obviously to transform the Polish soldier ideologically into a being similar to the Soviet soldier, to whom the Pole is bound by a network of military alliances.

"Grave injustices are still uncorrected. We must not, by any sanction of ours, help to perpetuate these wrongs. I have particularly in mind the oppressive division of the German people, the bondage of millions elsewhere, and the exclusion of Japan from United Nations membership. We shall keep these injustices in the forefront of human consciousness and seek to maintain the pressure of world opinion to right these vast wrongs in the interest both of justice and secure peace." (President Dwight D. Eisenhower.)

Work of American Community Chests

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1956

Mr. JOHNSON of Texas. Mr. President, Fred M. Lange, executive vice president of the Dallas County Community Chest in Texas, is one of the outstanding community chest executives of the United States. Mr. Lange through the years has raised many millions of dollars for charitable purposes.

Recently Mr. Lange, now touring Europe, was invited to speak in Stockholm, Sweden, on the work of American community chests. His address was given before a national committee representing 16 private business associations of Sweden. These associations contribute to voluntary philanthropy throughout Sweden through this committee.

I ask unanimous consent that Mr. Lang's informative address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS GIVEN BY FRED M. LANGE, L. H. D., L. L. D., EXECUTIVE VICE PRESIDINT, DALLAS COUNTY COMMUNITY CHEST, BEFORE NARINGSLIVETS GRANSKNINGSNAMND FOR GAVOR OCH UNDERSTODSANNONSER STOCKHOLM, SWEDEN, JULY 16, 1956

To understand the way American Community Chests work, let me very briefly review some general facts about the financing of welfare work in America. Although voluntary agencies always played a very large and important part in the welfare work in my country, the activities of private welfare organizations and the Community Chest idea of financing those private agencies were greatly accelerated at the time of the First World War.

At that time, because of wartime needs, there was a very great expansion of voluntary organizations. This was the era of the establishment of Community Chests and, as private organizations increased rapidly, Community Chests increased with equal rapidity. The Community Chests have as their purpose the combining of many private organizations into a single campaign for funds. This makes it unnecessary for each organization to put on its own campaign and has many advantages. It enables the fund raising to be conducted more efficiently and with less cost in terms of money and also in terms of manpower of citizens who must go out and collect the funds. It also enables the community to better understand how the work of these many agencies is interrelated, and the need for their working together as a team.

The second big change in the financing of American welfare activities came about in the 1930's during the depression. The needs of the great numbers of persons thrown out of work amounted so rapidly that it was impossible for local governmental units and private organizations to finance all necessary help. This situation forced the entry of the Federal or National Government into the picture. Since 1930 we have voluntary agencies and Government agencies cooperating and complementing each other.

At the present time there is a renewed push in most American cities to bring more and more private welfare organizations into a single fund-raising plan. Most of these more inclusive campaigns are called "United Funds." These joint fund-raising drives reduce the irritation created when many private organizations individually go to the same contributors. Even more important, however, these joint drives capture the interest and gain the support of the top leadership in the community. Interested citizens become volunteer solicitors, making them aware of, and creating in them an interest in social problems and in their community. This project enables people as well as agencies of different religious faiths and backgrounds to work together.

One of our leading educators, Dean Vasey of Rutgers University, speaking about this subject, recently said that the many board members and campaign workers interested in voluntary agencies are the "enlightened conscience" of our American communities. He noted that it is usually these people with knowledge and conviction about social problems who most often "speak out" when there is danger of losing essential welfare services, or when there is need to increase or improve essential welfare services. These same people follow closely legislation affecting governmental programs. He said that these are the people "who are making our American communities better and more attractive places in which to live."

Even though Sweden and Texas are very far apart and life in Sweden is different from what it is in Texas, there are some similarities; for instance, the population of Sweden and the population of Texas are about the same. I read that you have about 7 million people. Texas is much larger in size, having 263,000 square miles, while Sweden contains about 173,000 square miles. Texas is divided into 254 counties. For welfare purposes, in my State, programs are usually on a county basis. The population of Dallas County, the area covered by the Community Chest which I direct, is about 750,000 persons.

The Dallas Community Chest has made significant strides in recent years. For instance, in 1948 we raised $1,470,000. In 1955 we raised $2,395,000. This is an increase of 63 percent. In 1948 about 106,000 persons

contributed to the chest campaign. In 1955, with 311,000 persons employed in Dallas County, 192,000 persons contributed to the chest. This is an increase of 82 percent.

Community Chests and United Funds in Texas last year raised about $15 million. It is my rough guess that perhaps an additional $15 million was raised by voluntary agencies not in a Community Chest or United Fund. I would roughly estimate then that about $30 million was raised in Texas for private welfare purposes through voluntary giving.

The financing of voluntary services through a Community Chest such as we have in Dallas has many important aspects. We have an overall board of directors composed of 105 men and women. These people come from all walks of life. They are really a cross section of the entire community. The board of directors sets the general policies of the Community Chest, while many of the important day-by-day decisions are made by a 16-member executive committee. The paid staff of 15 members of the Community Chest carries out the policies and decisions of the board and executive committee. The composition of the board and executive committee is extremely important. As representatives of the overall community, these people vouch for the efficiency and integrity of the Community Chest organization. They increase the confidence which the community has in the chest because the community knows that outstanding men and women of exceptional competence are making the policies and important decisions. I cannot overemphasize the fact that all significant community groups should be represented.

This citizen control is further strengthened by the fact that each of the 37 agencies, operating a total of 103 centers, has a board of directors of its own. There is a total of 670 board members serving with the member agencies. Agency board members are expected to work in the chest campaign. This broad citizen participation is further strengthened by about 6,000 citizens who volunteer to work in the drive. Each of these volunteer workers learns a great deal about the work of the chest agencies and becomes a spokesman for them to the general community. It is truly a broad citizen effort, which means that it is a product of the people and for the people. It is their Community Chest and the agencies are their agencies.

This whole project is carried on with the philosophy that "Everybody gives and everybody benefits." Put in another way, when we help people who need us, we are helping everyone, and what hurts the general welfare effort hurts everyone.

To some degree our success depends upon our year-round public relations program. The Community Chest, with its small paid staff, and each of the 37 member agencies are ever alert to bring their story before the public in as many ways as possible. All publicity media are used. Television is being used more and more in Dallas. Agencies are encouraged to use constructive human interest stories for publicity and interpretation purposes. Each agency always states in its publicity that it is a Chest agency. The public relations director of the Chest assists these agencies in preparing material. Periodically, we have public relations clinics, when agencies are given ideas of how better to interpret their services to the general public. The Chest public relations department receives invaluable help from a publicity committee made up of outstanding public relations people in Dallas who contribute their time. We also get much help from such civic groups as the advertising league and the junior league. People who help in these various ways become partners in this enterprise. This further spreads the base of participation and strengthens the feeling that this is everybody's project.

In the actual solicitation of contributions every encouragement is given to make the giving convenient and fair. The total campaign organization is divided into divisions according to the major grouping of contributors, based on their type of business and ability to give. In this we have the cooperation of many businesses and unions; for instance, the worker can pledge an annual amount of money and have this amount deducted from his regular pay checks in monthly installments. At the employee's request the firm he works for will handle the deduction and send it to the chest. Most salaried workers are encouraged to give one day's pay as a fair share. People in higher income brackets are encouraged to give on a more generous basis.

A speakers bureau composed of informed volunteers gives talks before civic, professional, and employee groups explaining these matters.

In all of this we have the encouragement of the National Government, since under our income tax regulations a corporation may make tax-free gifts for charitable purposes up to 5 percent of profits. Individuals can make tax-free gifts of 20 to 30 percent.

Another of the many important aspects of our work is the way in which we determine the annual over-all amount which is needed for the combined agencies of the chest.

This is the amount which we call our annual campaign goal, and the amount solicited by the 6,000 volunteers. The paid staff of the Community Chest receives monthly financial reports and monthly activities reports from each agency. This makes possible year-round budget control.

Early in the spring outstanding local citizens are appointed to serve on what we call the Citizens Budget Committee. It would be impossible for one committee to review the budgets of all 37 agencies. Therefore, the committee is divided into 4 groups and each agency is assigned to one of the four budget groups, depending on its field of service. The four budget groups are: Public Health and Medical Services, Group Work and Recreation Services, Family Services, and Children Services.

Each board of directors every year studies its program in view of future needs. In April every year each board of directors draws up a proposed budget which it believes its agency will need during the next fiscal year beginning November 1. In June, a committee from each agency personally appears before its budget committee to explain and justify the request for future funds.

During these conferences between the chest budget committee and representatives of the agency, staff of the Community Chest and also of the Council of Social Agencies are present. The chest staff has at its fingertips data concerning previous expenditures of each agency, for each of the many items which comprise the total budget.

Staff members of the Council of Social Agencies, whose overall job is to help coordinate the many welfare activities in Dallas, are available during the discussion for consultation. The Council of Social Agencies, who work is financed by the Community Chest, includes in its membership all major health, welfare, and recreation agencies, regardless of how they are supported. The council is responsible for working with all agencies and for gathering information so that the community knows (1) which welfare problems need most attention, (2) which problems are changing, (3) which agencies can best give the needed services, and (4) how the needed services can be given most effectively and efficiently with the least amount of unnecessary duplication. The chest finances the council program as a service to the entire community.

Each chest agency is required to be a member and to cooperate with the council. While the Dallas chest and council are organizationally separate, each with its own board, there is interlocking of directors. While the chest raises funds for chest agencies, the council strives to guarantee to the public that the most urgent welfare needs are being met as effectively and efficiently as current resources permit. As you can understand, in a very rapidly expanding community such as Dallas, the welfare situation is constantly changing and requires constant study.

Complete information about expenditures and changing needs is essential since the chest budget committee carefully reviews every agency's total budget, which is broken down into about 20 separate items. This enables the chest budget committee to know specifically which of the agency's expenditures and income will be going up or down and why.

This same procedure is used with all Chest agencies, regardless of how much or how little of the agency's total income comes from the Chest, and how much is derived from charging fees for its services, or from other sources. Several Chest agencies in Dallas receive a small proportion of their total income from the Chest. On the other hand, some agencies receive all of their funds from the Community Chest. This is so because, depending on the nature of service, some agencies can charge fees while others cannot. Some agencies have been able to supplement their Chest income by receiving grants from foundations and trusts; still other agencies receive part of their funds from the Community Chest and part from the local or National Government. The scrutiny of each budget item is the same regardless of the sources of the funds.

A good example of an agency which receives funds from a variety of sources is the Dallas Child Guidance Clinic, which provides psychological testing and psychiatric service for emotionally troubled children. That agency is currently receiving support from seven sources: the Community Chest, fees from clients, the Texas State Department of Health, the Dallas Public Schools, a local private foundation, and a private statewide foundation, and the Dallas Mental Health Society. The budget of this agency is handled in the same way, item by item, as the budget of the Neighborhood Recreation Association, a small community center which receives all of its operating funds from the Community Chest.

After each agency's budget has been reviewed, the four budget groups total up the sum of all the funds they have approved. This sum and a complete report is given to the Chest executive committee. After further discussion and study, the Chest executive committee sets the campaign goal for that year, based upon the information provided by the budget committee and upon several additional factors. An additional amount must be added and earmarked as a reserve for necessary unforeseen expansions during the coming year. Also an amount must be added as a reserve for emergencies and an amount for uncollectible pledges and shrinkage.

Each agency is immediately notified of the action taken on its particular request. Should the agency feel that its request was not given proper consideration, that agency can return to the budget committee for a rehearing. Also, in some exceptional cases where the budget committee had denied some items, the agency can make another request after the annual campaign, provided the campaign has been a success. In this way, some additional adjustment may be made.

The various programs of the agencies serve people in all income groups. There are some services which can be obtained only from a Chest agency. Examples of this are Boy Scouts, Girl Scouts, services for unmarried

mothers, marriage counseling, and certain types of nursing, medical services, and day care for children. For this reason, agencies which serve all income groups are encouraged to charge fees based on a sliding scale, depending upon the ability of the family to pay. Some families pay the full cost of service; some families pay part of the cost, while others pay nothing at all. Although in Dallas the Chest raises about $2½ million, the total expenditures of the Chest agencies is close to $6 million. It really means that for an investment from voluntary contributions of $2½ million the Chest agencies are providing $6 million worth of service to the community.

The budgeting process is an important part of not only financing, but planning for American welfare services. The Chest Budget Committee made up of outstanding local citizens represents the persons who use the agencies' services and who contribute to the cost of the services. It includes Negroes, whites, Protestants, Catholics, Jews, housewives, salaried workers, union officials, professional men, career Government men, and leaders of business and industry. It is important to clarify that although these people are identified with these groups, they do not come as official delegates. They come as citizens and are free to act as individuals. For instance, the man from industry does not speak officially for industry, nor does he commit industry. He acts without needing to have his decisions approved by his group. This is consistent with our democratic way of life. However, the benefits of this budgeting system are greater than giving representation to people who use and pay for the services. Through this close review of each agency's budget, citizen leaders get to know a great deal about problems in their community. They review the relationship and the division of responsibility between private agencies and governmental agencies. They help to keep a proper balance among the many agencies and help to prevent the agency with the strong board and dramatic appeal from getting more than its fair share of the available funds. They learn that each community needs an orderly and balanced set of social services and that if an agency gets out of line, the balance is upset and the total effort will be less effective.

The budgeting process pledges to the community that the funds which the Community Chest collects for the agencies are vitally needed and are being spent wisely. Also, the budget committees learn very quickly that the various agencies could provide more good services than current funds can support. This means that the budget committees must choose and approve only those expenditures which they feel are the most important. Because of this they can interpret to the general public the necessity for, not only attaining the current goal, but the need to raise more money in future years, so that additional services can be given. It is democracy at work through public education and voluntary commitment.

Because the budget committee strives to approve requests for which they believe funds will be available, they can guarantee to the community that the amount of money being asked is a realistic amount.

I believe you will agree with me that the process which I tried to outline contributes much to our community life. It is far more than merely a check on the validity of the agencies' requests. It not only keeps fund-raising costs low, it not only makes for greater efficiency, it not only reduces irritation on the part of the givers, it not only helps to keep balance among the many various types of social service agencies, but it has educational, social, and spiritual values.

Many of our people say that the byproducts of the Community Chest drive are just as important as the direct results in terms of money; for instance, our business firms tell us that working in the chest campaign is excellent leadership training for their young executives. The fact that people from all walks of life and from all income groups, regardless of faith, color, or nationality, work side by side, has great value. It encourages tolerance and decreases prejudice. This working together for a common unselfish goal is basically a spiritual experience which cuts across all religious and denominational lines. It lowers barriers between groups of people. We never lose sight of this fact. Participation by clergy of all faiths is emphasized. Many of the campaign meeting are led by outstanding spiritual leaders. The efforts of the volunteers and the significance of the money raised is constantly translated into spiritual values based on religious convictions.

In Dallas we are convinced that the democratic way of life is best of all. We are convinced that the quality of our democracy depends upon our standard of values, which in turn depends upon the quality of our spiritual life. We know that our Community Chest effort gives our people an opportunity to put their religion to work. Through this work they dedicate themselves to the finest and most precious aspects of our way of life. There is no question in our minds but that this program, hand in hand with the church, strengthens the foundations of the American system.

Recent Student Demonstrations in Guatemala

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 18, 1956

Mr. HOLLAND. Mr. President, a few days ago a representative of the Republic of Guatemala came by my office to discuss with me matters of interest to his Government. During the course of our conversation I expressed to him my deep concern over the manner in which the recent student demonstrations in Guatemala were handled. I deplored the use of firearms by the police during those demonstrations, and expressed regret that the matter could not be handled without firing into the groups of students.

On July 16 I received a letter dated July 14 and a detailed memorandum, from Mr. Julio Asensio-Wunderlich, chargé d'affaires, Embassy of Guatemala, setting out the facts regarding this situation, as viewed by the Guatemalan Government. I know many other Senators are as concerned about this particular incident as I am, and in order that all Senators may have an opportunity to read the information supplied by the Embassy of Guatemala, I obtained the consent of the writer that the letter to me dated July 14, and the accompanying memorandum, be printed in the Appendix of the RECORD. I ask unanimous consent that such course be followed.

There being no objection, the letter and memorandum were ordered to be printed in the RECORD, as follows:

EMBASSY OF GUATEMALA,
Washington, D. C., July 14, 1956.

The Honorable SPESSARD L. HOLLAND,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: I was informed by Mr. Patrick McMahon of his conversation with you on Tuesday and of the concern you expressed, regarding the recent student demonstrations in Guatemala.

Please be assured, Senator, that my Government appreciates most deeply the interest you have shown in Guatemala and the assistance you have rendered to our cause. We value most deeply your sympathetic understanding.

For that reason, I venture to enclose a memorandum that sets forth some of the facts regarding the student demonstrations, which were not included in the press dispatches.

Please accept, Senator, the renewed assurances of my highest consideration.

JULIO ASENSIO-WUNDERLICH,
Chargé d'Affaires ad Interim.

MEMORANDUM TO SENATOR SPESSARD L. HOLLAND FROM THE EMBASSY OF GUATEMALA

1. The June 24 student demonstration in Guatemala was a culmination of a long series of incidents provoked by different groups, clearly at the instigation of Communists. The first student demands were moderate, the President himself met with their representatives several times and granted them. This resulted in an increased arbitrary attitude by student groups, which finally dropped all pretense at disguise and publicly adopted outright Communist tactics. The attached list of their "demands" clearly shows the character of the movement.

2. Although the demonstrations were instigated by certain student groups, only a portion of the rioters were actually students. The attached photograph, taken immediately before the outbreak of violence, clearly shows that many of the demonstrators are not of student age.

3. A substantial number of demonstrators were armed with knives and revolvers.

4. The Government is firmly convinced that the instigators of the demonstration intended to provoke violence.

5. The police kept their guns holstered when they ordered the demonstrators to disperse, and used only nightsticks at the first outbreak of violence.

6. The first shots were fired by the demonstrators. Not until a policeman was shot was their fire returned.

7. The actual casualties were 4 dead (including a policeman) and 17 wounded.

8. The attached photostat of one of the leaflets, circulated by the demonstrators, clearly proves the Communist nature of the incident. Among demands listed are the abrogation of our anti-Communist laws, the return of political exiles (all Communist), the confiscation of property owned by United States firms, and the denunciation of the "Yanki-Guatemalan" military treaty. This phraseology will be immediately recognized by anyone familiar with Communist propaganda.

9. The Government has positive proof that the student groups responsible for the demonstration have been in constant contact with the Prague headquarters of the International Union of Students. Correspondence between the Guatemalan group and the Prague headquarters was intercepted and has been published in the Guatemalan newspapers. Shortly before the demonstration, the Prague radio beamed a broadcast to Guatemala, urging the people to overthrow the "Fascist Yanki-dominated" Government.

10. The June 24 incident was timed to coincide with several other outbreaks in Latin American countries, all Communist directed, prepared for the date in which the

Presidents of America were to meet in Panama.

From a letter addressed by the International Union of Students, of Prague, Czechoslovakia, to the Frente Universitario Democrático of Guatemala:

"The anniversary of the suppression of the Democratic Government of Guatemala." It refers to the overthrow of the Arbenz regime.

"The response of the students of the world when Guatemala was attacked, gave them strength and hope."

This letter instructs students all over the world to circulate the declaration made by the Guatemalan students, also photographed in this newspaper, and from which declaration are the following phrases:

"The wealth that we Guatemalans zealously defended, have been delivered to foreign corporations. While the land that was given to the peasants under the Agrarian Reform are snatched from them with violence and returned to the great foreign landowners (the United Fruit Co.) and petroleum and mining zones are given to well known international trusts (meaning the 29 U. S. oil corporations and several mining companies now exploring in Guatemala)."

The pamphlets and leaflets that circulated in Guatemala just before June 24, calling for the people to meet in a public square and to march through the streets of Guatemala City to demonstrate for: the immediate return of political exiles, the immediate freedom of political prisoners, the suppression of repressive organizations (anticommunist bloc), the abrogation of Law No. 59 (anticommunist law given by the Guatemalan Junta August 24, 1954), the defense of human rights, the abrogation of laws No. 570 and 584 (reforms to labor laws), the abrogation of article 6 of the Constitution (anticommunist), the termination of concessions to United Fruit Co. and American Power Co., the termination of foreign loans and purchase of arms, the construction and administration of new electric power plants of Jurún-Marinalá by the State, the abrogation of article 154 of the Criminal Code (right to persecute criminals), the denunciation of the Yanki-Guatemalan military treaty, and for our national sovereignty.

It is to be noted that in paragraph 3, the leaflet stated that in 1954 (when Arbenz was overthrown) "Constitutional order was broken, foreign intervention ended the legal state and imposed an antidemocratic government that supports and stimulates foreign interests" and this because all this propaganda tends to show the present Government as "imposed by the United States State Department, pro-American and sold to United States interests," as mentioned in other propaganda.

Mr. President, I may say the memorandum refers to certain pictures, which, of course, cannot go into the RECORD. I shall leave them on my desk, in the event any Senators wish to see what those pictures show—namely, that people of middle age participated in the disorderly assembly at the time of the student demonstrations.

States' Rights and the Supreme Court

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 17, 1956

Mr. SPARKMAN. Mr. President, in the May 1956 issue of the Masonic Monthly appeared part I of an article entitled "States Rights and the Supreme Court," written by Dr. James A. Chandler, a 32d-degree Mason and a Knight Templar. He is also a Methodist preacher. Part II of the same article was published in the June 1956 issue of the same publication. I ask unanimous consent that the two parts of the article be printed in the Appendix of the RECORD.

I am advised by the Public Printer that the article will make approximately 2⅓ pages of the CONGRESSIONAL RECORD at a cost of $179.67.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATES RIGHTS AND THE SUPREME COURT

(By Dr. James A. Chandler, 32d Degree Knights Templar)

("We owe it to our ancestors to preserve entire those rights, which they have delivered to our care: we owe it to our posterity, not to suffer their dearest inheritance to be destroyed."—Junius.)

Norman Thomas ran six times for the Presidency of the United States upon the platform of the Socialist Party. Franklin D. Roosevelt took over that platform, called it the "New Deal," and won. For that reason it is reported that Thomas said he would not run again.

For long years the Negro vote was strictly Republican, but in 1936 it was captured by the New Deal. The Negroes "joined hands with the newly organized CIO and other minority groups to seek leftwing legislation from the New Deal." Together they sought a restoration of the civil rights legislation that had been enacted during the Reconstruction Period, which repeatedly had been declared unconstitutional by the Supreme Court. (See "Race Integration Cases," p. 1, by Charles Wallace Collins.)

Despite that fact along came Harry Truman with his so-called "Fair Deal." He appointed a special committee from whose report was evolved "The Truman Civil Rights Program," socialized medicine, the FEPC, etc. It is traceable from Truman to Roosevelt, from Roosevelt to Thomas, from Thomas to Russia.

That program was espoused by the Negro leaders in the North, who have never ceased their agitations, aided and abetted by Communistic organizations. It could very appropriately be called "The Negro's Civil Rights Program." Ostensibly, the primary purpose of that program was desegregation of the races, but more recently the ultimate purpose has become apparent—not only the integration of Negroes into all white schools but by use of that instrumentality to procure racial integration in the South, intermarriage, mongrelization, amalgamation, i. e., to produce one race where the two had existed, a Negroid South! It seems to be a basic dream and purpose of the leading Negro agitators. Why?

The recent decree of the Supreme Court lends itself to that program of the Negro and the subversive organizations in this country but of Russia.

Mr. Edward Scott, columnist of the Habana (Cuba) Post says that "in the Negro Republic of Liberia, discrimination against the white race is established under its constitution, which provides that no person shall have the power to own property or to vote, unless he is a Negro." That seems strange, and it raises many questions, but stranger still is the fact that, though we find in the history of nations and governments every kind of slavery, injustice and cruelty, "there will not be found one single instance where a government has forced one race against its will to be integrated with another"—Charles Wallace Collins.

It was recently declared by certain distinguished Members of the United States House of Representatives that a former President of the American Bar Association says that 98 percent of the good lawyers of America have no respect for the legal talent of the present members of the Supreme Court; that they sometime ago asserted that there are no restraints whatsoever upon them except those that they impose upon themselves; that not a single self-respecting lawyer in this country has written an opinion justifying the segregation decision; and that the American Bar Association has an outstanding offer now to any lawyer who can justify that decision, but that there are no takers. Furthermore, Representative LANHAM pointed out the lamentable fact that "there are absolutely no requirements, no qualifications, other than age, in the law or the Constitution, for members of the Supreme Court." (See CONGRESSIONAL RECORD, Apr. 16, 1956, pp. 5710–5713.)

It is the common opinion of the good lawyers of this country that the Supreme Court has overstepped its powers and usurped a right reserved by the Constitution solely to the States, when it decreed the integration of Negroes into our schools, which really means all white relations; that the function of the Court is not to enact law but to interpret the laws that already exist; and that the reason why the Court gave no contutional exposition of its radical decree is that it simply could find none to give. That being true, the States must win their fight, not upon racial grounds, but upon a constitutional basis, the return of those rights reserved to the States by the Constitution.

The Supreme Court has no functions of a Soviet Republic, nor the authority of an oligarchy, or a judicial dictatorship—a usurpation to which it has been moving for 20 years. Its powers are listed, limited, and delegated to it by the Constitution of the United States, which every justice swears to uphold. Each State is a unit of power that has delegated certain powers to a one government called Federal, which simply means united by compact. It is also called a republic, a sort of a one State in which the States have united for the good of all. But before those States were united, each State was a sovereign political unit within its own rights. The very foundation of that republic is home rule, or self-government. It has no right through the Supreme Court or any other court to lord it over the units of power, the States, that created it. Else, the created would be greater than its creators. What freak of Frankenstein is this that rises up to crush those who made him?

We, as southerners, should like to believe that we still live in the Republic of the United States of America; that the powers we, as sovereign States, delegated to that Republic shall not be betrayed by 9 politically appointed justices, 8 New Deal and 1 Republican, none of whom is noted for his legal talent; and that that Republic, or the Supreme Court, shall not feel itself so mighty or strongly grown that it can, without remedy, defy the powers that gave it birth. It is a dangerous decree. It could mean the disruption of all constitutional government. President John Adams once said, "There was never a democracy that did not destroy itself."

George Washington in his Farewell Address, September 17, 1796, warned us against this day—

"Let the Constitution be changed by constitutional means, but let it not be changed by usurpation. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism."

Thomas Jefferson time and again warned us against this day, the encroachment of "the Judiciary Branch * * * which may some day press us into tyranny" by a whittling away of the rights reserved to the

States by the States by common consent. Those rights were not handed down by favor to the States by the Republic, or the Federal Government, and they cannot be lawfully deprived of them.

Thomas Jefferson said:

"The great object of my fear is the judiciary * * *. It is a very dangerous doctrine to consider the judges as the ultimate arbiters of all constitution questions. It is one which could place us under the despotism of an oligarchy * * *. The Constitution has erected no such single tribunal, knowing that to whatever hands confided, with the corruption of time and party, its members can become despots." (See CONGRESSIONAL RECORD, April 16, 1956, p. 5712.)

Dean Clarence E. Manion, one of the greatest constitutional authorities in the United States, said:

"For many years it has ben painfully obvious that the Federal executive and the Federal courts are in an effective combination to destroy the constitutional integrity of the States by the centralization of power in the Washington bureaucracy. Only a strong, self-conscious Congress and a vigilant sacrificial self-reliance on the part of the States can now save our Republic." (See CONGRESSIONAL RECORD, April 17, 1956, p. A-3081.)

The Southland cannot forever endure the usurpation of her rights. The Supreme Court can never abolish segregation and its contomitant mores, because segregation is inherent and conforms to the divine purpose and pattern of God Himself. The courts can only create by their decrees a condition that will become intolerable.

Now once again along comes Harry Truman's so-called program of civil rights, about which there was much discussion but no legislation. President Eisenhower has done much to further that program. Mr. Brownell appealed to the Supreme Court for a decision favoring desegregation and the integration of Negroes into white relations. The Court after a review of certain books on sociology, psychology, and anthropology brought forth the notorious decision that is so repulsive to the ablest legal talent in this country and to the vast majority of our southern people.

We need not less respect for sociology but more respect for law and the Founding Fathers of our country. We need fewer opportunists and fewer worshippers at the shrine of expediency. We need more men to whom the smell of powder is sweet in the cause of right. We need fewer stooges and less yes-yes. We need more Patrick Henrys to spit the fires of patriotism and justice into the face of demagogery and cowardice. We hear much these days about the fear of change. Change. From what to what? We need a change back to the first principles of law and government from socialism—a creeping paralysis upon the body politic—that is threatening the very existence of our Republic.

It seems that the present administration is fast winning back the Negroes to the Republican Party. Our World, a Negro magazine, New York, published an article, titled, "Eisenhower's Black Cabinet," in which it is said that some 15 Negroes have been appointed to key Republican positions, and that an increasing number of persons who determine and carry out Federal policies are Negroes. That magazine is listed by the House Un-American Activities Committee as being "among publications which the committee found to be Communist infiltrated and controlled." (See Doc. No. 137, May 14, 1951.) It is also a well-authenticated fact that President Eisenhower has ruled against any segregation or discrimination in veteran hospitals among patients or nurses, that white nurses must serve Negro men patients though there are Negro nurses there to wait upon their own kind.

Now the Democrats and the Republicans this election year are quarreling among themselves as to which shall have the greater credit, or has done the more, for the so-called program of civil rights, the purpose of which is the furtherance and fulfillment of the Negro's Communist inspired, sponsored, and supported purpose and plan—not just for the integrated education of the races but racial integration itself. If a two-party system is healthy for our country, more than likely a third party in the Southland to hold the balance of power would make it more so. Why not? Have not the rights of the Southern States been ignored and kicked around long enough?

When the 14th amendment came along, the radical Republicans planned to enact legislation to weaken the States and to establish a strong Central Government in Washington that would dominate the South through carpet-bagger-Negro rule. When it was quite lawfully submitted to the States for ratification, it was defeated. The rejection infuriated the Republican Congress. It took over the Southern States at the point of the bayonet, disfranchised the white voters and put the ballot into the hands of the Negro. When the 14th amendment was again submitted to the States (1868), it was ratified almost unanimously by the Southern States—"the United States Army attended to the details"—but the ratification was in violation of the Constitution because it was forced "into the Constitution at the point of the bayonet." The Congress forthwith (1870) enacted legislation to enforce the 14th amendment, and (1875) it enacted the Civil Rights Act.

That act occasioned some violence in Louisiana. Certain white men broke up a Negro political meeting. They were convicted by a Federal court of violating the Enforcement Act of 1876. When the case was appealed to the United States Supreme Court in 1877 it decided that the Congress had no power from the 14th amendment to legislate in respect to acts of individual persons, that the punishment of any crime committed within a State is reserved to and becomes the responsibility of the State in which the crime was committed. The Supreme Court said: "The very highest duty of the States, when they entered into the Union under the Constitution, was to protect all persons within their boundaries in the enjoyment of those unalienable rights." That opinion was confirmed absolutely by the Supreme Court, October 15, 1883. From 1876 to 1936, 60 years, there was peace in the Southland between the two races because of that and subsequent decisions of the Court. But in 1936, the NAACP and its subsidiaries and its affiliates, and the Negro as a voting bloc, forsook the Republicans and joined the Democrats, as aforesaid.

The South lost its veto (a NAACP victory) over the nomination of candidates, when the national convention abolished the two-thirds rule, which was a blow to the South. Then the NAACP began its agitation for a reversal of the Supreme Court's position on civil rights, as embodied in the Louisiana appeal case of 1876, which had held sway from 1876 to 1936. Here again enters the Truman civil-rights program, which was reintroduced in the 83d Congress.

The Supreme Court by unanimous decree on Monday, May 17, 1954, reversed the former decision of the Supreme Court, which in the year 1896 held that segregation was not a violation of the equal protection clause of the 14th amendment when "separate but equal" facilities were offered, a decision that had been confirmed by six decisions of the Court in years subsequent to 1896.

The strangest of all things, in the opinion of the best legal talent in this country, is not only that the Supreme Court gave no "constitutional exposition of its radical change" from the position the Court had so long held in honor and gave no opinion of any jurist or any previous decision of the Court, but confessedly based its decision upon seven psychologists and sociologists, Dr. Gunnar Myrdal's "An American Dilemma" being cited as the leading authority. Who is Gunnar Myrdal?

The Supreme Court by unanimous decree on Monday, May 17, 1954, reversed the Supreme Court, which in the year 1896 held that segregation was not a violation of the equal-protection clause of the 14th amendment, when "separate but equal" facilities were offered, a decision that had been confirmed by six decisions of the Supreme Court subsequent to 1896.

The strangest of all things, in the opinion of the best legal talent of this country, is, not only that the Supreme Court of 1954 gave no constitutional exposition of its radical change" from the position the Court had so long held in honor, and gave no opinion of any jurist or any previous decision of the Court, but, confessedly, based its decision upon seven psychologists and sociologists, Dr. Gunnar Myrdal's An American Dilemma being cited as the leading authority.

Who is Dr. Gunnar Myrdal? He is a Socialist.

(The most dangerous of all Reds have never been members of the Communist Party. They call themselves "liberals" or "humanitarians." Hitler was a "liberal," and his Nazism was "National Socialism." The U. S. S. R. is the "United Socialist Soviet Republics." Russia does not use the word "communism" when it can be avoided. We should not be deceived by those who loudly denounce communism but whose purposes are Red.)

Dr. Myrdal is a professor in the University of Stockholm, Sweden. He calls himself a "social engineer." He was an economical adviser to the Swedish Government and a member of the Swedish senate. He was brought over (1937) to this country by the Carnegie Corp. of New York to study race relations, particularly in the South, of which he, confessedly, had known nothing. Dr. Myrdal was much in the company and support of Negro leaders while here.

In 1944 Harpers published Dr. Myrdal's 1,500-page, 2-volume book, An American Dilemma. His solution of the dilemma and of all segregation problems is integration, based upon the theory that there is no such thing as race. Where does he get this solution? Not from history or nature, and certainly not from the word of God, but from a pseudoscience built upon hypothetical, fine-spun theories and ipsi dixits.

Dr. Myrdal asserts under "Reflections in Science," page 92, "It (social research) is constantly disproving inherent differences and explaining apparent ones in cultural and social terms. By inventing and applying ingenious specialized research methods, the popular race dogma is being victoriously pursued into every corner and effectively exposed as fallacious or at least unsubstantiated." Under "Race and Ancestry," (p. 115), he says, "In modern biological or ethnological research, 'race' as a scientific concept has lost its sharpness of meaning and the term is disappearing in sober writings. * * * From the beginning Negro writers took the stand that the American dogma of racial inequality was a scientific fake (p. 94). * * * The 'white American race' is gradually beginning to be a joke even among the populace, except in the South. * * * The fundamental unity and similarity of mankind * * * is becoming scientifically established. * * * When we sometimes, for the sake of convenience, talk about 'race,' 'racial' characteristics, or 'racial' relations, we should be understood to refer to the popular conception of the word, not the scientific one," that is, that all people, biologically speaking, are one and the same. The doctor makes many assertions

that seem to be incapable of proof. He only pleads that the Negro, scientifically or biologically considered, is one in and with all other humans, or the equal of any other people, and that all he needs to prove it is better environment and an equal chance. According to Dr. Myrdal, "The social sciences in America, particularly sociology, anthropology, and psychology, have come through a conspicuous development, increasingly giving the preponderance to environment instead of heredity" (p. 89). Heredity has been with us a long time, and it is far from being ruled out of court. The Bible has something to say about that.

Whatever the researches and findings of science may be, or claim to be, there is a fundamental law that science can never disprove, or change, and that is that like begets like and that like naturally seeks like, and it requires no laboratory tests to prove it, because it is self-evident that white begets white, black begets black, yellow begets yellow, red begets red. It is equally evident that the Supreme Court has decreed the Negro race into all relations with the white race—a decree that is as bereft of legality as Dr. Myrdal's thesis is of scientific proof and moral value. That is the crux of the whole matter.

After Dr. Myrdal has written much very assertively about what science has discovered for the Negro, he finally concedes, under "Race and Ancestry," chapter 5, page 136: "This chapter has mainly been a review of a great number of questions upon which science does not as yet provide precise and definite answers." Yet, he holds that there is no such thing as race, that scientifically or biologically we are all one and the same, with only minor individual or group differences that matter not at all (p. 115). With a snap of the finger, just like that, he settles everything. Yet, Dr. Myrdal was brought over from Sweden to this country to study for 6 long years the Negro problem, especially in the South, freely conceding that "he has never been subject to the strains involved in a black-white society and has never had to become adjusted to such a situation," to make the discovery, supposedly, that we all are biologically one and the same, a conclusion built upon premises confessedly hypothetical and arbitrarily chosen by him. Yet this man, Dr. Myrdal, a foreigner, has the audacity to say in his book (p. 13), written for the American Negro, "The Constitution of the United States is impractical and unsuited to modern conditions" and that its adoption was "nearly a plot against the common people"; but, more horribly still, this is the book the Supreme Court cites as its leading authority! The Honorable Charles Wallace Collins, one of America's most brilliant constitutional lawyers, says: "the book An American Dilemma has no scientific validity. But as propaganda it has become the bible of the educated Negro. * * * But neither the Carnegie Corp. nor Myrdal dreamed that the book would be cited by the Supreme Court as the principal authority for Federal enforcement of racial integration in the public schools. * * * What have we come to when a fund corporation can hire a foreigner to write a phony book about the Negro and then see the Supreme Court put its recommendations into effect!"

God created the races. God meant that the races should maintain their racial purity, because history and nature show that the strongest and the best come from nations that preserve their racial purity and that those who do not do so suffer disastrous consequences. The same law holds good in the breed of horses. How many races are won by mongrelized breeds?

According to Dr. Myrdal, scientifically or biologically we are all one and the same! But, socially, we are two races, but what Dr. Myrdal would advise and what the Negroes want and what the Supreme Court decrees is racial integration, the merging or consolidation of the two races so as to make one race where there had been two. That is the ultimate purpose of all this integration business—all merged into one. When the white man's blood merges with the blood of a Negro woman's, the offspring is Negro. If Dr. Myrdal's solution should be accepted and carried into effect, in time nothing would exist but the Negro race. "The American Negro is the most race-conscious of any minority group in this country, yet his leaders deny the existence of races of man and brand as 'racism' or 'racist' anyone who asserts to the contrary" (Charles Wallace Collins).

When Dr. Myrdal began his study of the Negro question in this country, he very frankly acknowledged his total ignorance of it. No wonder his book is colored by the colored leaders with whom he held so many interviews. No wonder his book contains certain conclusions that are untenable. It is a well-known fact that if you let someone get by you with false premises, he can prove that black is white.

Dr. Myrdal concedes that his "value premises" are only of "an hypothetical character." He says, "The scientific basis for constructing our 'field of valuations' is poor. Public opinion in respect to the Negro problem has not been studied much, and the studies made do not meet our requirements. For the most part we have been forced to base our generalization on impressionistic observation of the values held by different groups and individuals." (See pp. 1061–1062, sec. 4a to 4g.)

The fact is that Dr. Myrdal, strictly speaking, is not the author of the book that bears his name, though he claims full responsibility for it. He is the compiler. During the 6 years this book was being prepared, between 75 and 100 writers were busy writing their anti-South propaganda. Many of them were Negroes, such as Ralph Bunche, Walter White, and Dr. Du Bois. Thirty-five research manuscripts were deposited in the Schomberg Collection in the New York Library, and Dr. Myrdal and his assistants compiled An American Dilemma from that mass of material. Yet, from that mass of material, the Supreme Court quotes and bases upon it what may prove to be one of the most tragic decisions ever rendered in this country. It threatens the very existence of the Union because it destroys local self-government reserved to the States by and in the creation of a coercive centralized government in Washington, the despotic oligarchy that Washington, Jefferson, Madison, and others foresaw and warned our country against.

School children soon learn that there are three branches of Government, the legislative, the executive, and the judicial. Congress is the only branch that has the power to make our laws, but when the Supreme Court issues a decree that applies to the whole country, it is tantamount to an act of Congress, and it thereby trespasses upon the legislative branch and assumes a dictatorial authority that finds no justification in the Constitution of the United States.

The Honorable Charles Wallace Collins, who for 40 years was a member of the bar of the Supreme Court of the United States, also director of the Federal Legislative Reference Service, Law Librarian of Congress, Librarian of the Supreme Court of the United States, the author of several authoritative books on constitutional law, and is honored far and near as being one of America's ablest constitutional lawyers, says in his brochure, The Race Integration Cases, page 7, "The Supreme Court itself at the head of the judicial branch of the Federal Government has rushed in where neither of the other two branches can go and is attempting to set up a new unheard of national policy in this field which is designed to revolutionalize and coerce the human behavior of about 40 million white people and 10 million Negroes with the dictum that Negroes and whites are not only equal but are racially identical. If the Supreme Court succeeds in this effort the constitutional Republic is dead and the Consitution itself becomes a tattered scrap of paper. The implication and potentialities of this action by the Court staggers the imagination. If the Court can thus take possession of the lives of the people of the whole Southern region and doom them to racial oblivion, there is no limit to which the Court can go in any direction."

Address by Hon. Alexander Wiley, of Wisconsin, at Arpin Farmers Union Picnic

---

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 18, 1956

Mr. WILEY. Mr. President, last Sunday afternoon, it was my pleasure to journey to Arpin, in my State, to address a picnic of the Arpin Farmers Union at Powers Bluff.

It was a pleasure to meet with grassroots farmers, their families, local officials, and State legislators.

I met, for example, with William Stanton, president of the Farm Union local; Floyd Sparks, organizer of the local; State Senator W. W. Clark, of Vesper; and Assemblyman John Crawford, of Marshfield.

I have in my hand the text of the address which I was pleased to deliver on this fine occasion.

I referred in the course of this address to various efforts which I have made down through the years, and which I am now making on behalf of our farmers and all other segments of our population.

I think that it might be of interest to point out citations from the public record down through the years, documenting some of my efforts.

So I assembled some of the newspaper clippings which show what I have done for farmers on such issues as farm parity, school milk, Dairy Day, dairy research, cheese support.

I have also assembled items from the press with regard to my past efforts for the St. Lawrence seaway.

I ask unanimous consent that these various articles from the press be printed in the Appendix of the RECORD, to be followed by the text of a letter which President Eisenhower sent me following the victory of the St. Lawrence seaway—a crucial plank in my farm platform.

There being no objection, the address and articles were ordered to be printed in the RECORD, as follows:

PAST CLIPPINGS FROM WISCONSIN NEWSPAPERS DEMONSTRATING SENATOR WILEY'S EFFORTS FOR FARMERS

WILEY ADVOCATES AID FOR FARMERS

SILVER LAKE.—Adequate distribution and temporary Government aid were recommended as a solution to the dairy farmers' problems by Senator ALEXANDER WILEY (Republican, of Wisconsin) Friday night at the 13th annual meeting of the Manitowoc County Farm Bureau.

WILEY firm in stand for high farm prices.

GOP to give farmers fair supports—WILEY.

WILEY'S 90 PERCENT PARITY FOR DAIRYMEN

Senator WILEY, as senior Senator from a senior dairy State of the Nation, has introduced in the Senate a bill for milk price support at 90 percent of parity.

Senator WILEY's proposal, companion bill to a House measure sponsored by Representative Reid Murray, of Wisconsin, is Wisconsin's way of saying that it will insist on being "taken care of" in its own leading agricultural industry if other types of farming are to be benefited in a distribution of Government largess. After all, milk is one of the most important foods, and it obviously will be impossible for dairymen to stay in business unless they obtain the same treatment as those in other lines of the farming business.

If the Government has the answer—as many farmers apparently believe it has—Senator WILEY's bill probably comes as close as any other yet devised.

WILEY PRAISES CO-OPS

"Cooperatives have become an indispensable part of the American scene," Senator ALEXANDER WILEY, Republican, of Wisconsin, told the Senate. This is particularly true in agriculture, he said.

Co-ops of all kinds—local, regional, national—"have become invaluable aids to farmer and consumer alike," WILEY said January 6.

He praised National Council of Farmer Cooperatives, the Cooperative League of the United States of America, American Institute of Cooperation, National Milk Producers Federation, National Rural Electric Cooperative Association, and National Livestock Producers Association.

WILEY to back cheese trade.

Washington background—WILEY rates as top Ike man in Senate—by Roscoe Drummond.

WILEY protests lack of butter in diet of veteran hospitals.

WILEY says dairy industry is being taken for a ride.

National Dairy Day proposed by WILEY.

SENATOR WILEY PROPOSES MORE MILK FOR SCHOOL PROGRAM

WASHINGTON, D. C.—Senator ALEXANDER WILEY, Republican, of Wisconsin, on January 9 introduced legislation which would expand by one-third the special school milk program. He urged immediate action by Congress on legislation that would maintain the flow of milk to schoolchildren during the rest of this school year.

WILEY seeks United States dairy research laboratory to be built in Madison.

[From the Wisconsin Agriculturist and Farmer of April 2, 1955]

BILL GROVE'S NOTEBOOK—WILEY WANTS MILK RESEARCH CENTER

"Research center such as the one provided for in the bill introduced by Senator WILEY is definitely needed," says Bill Groves. "Constructive research is necessary for an industry to expand or even for survival."

Dairy plight in Wisconsin held critical—WILEY gets report of University of Wisconsin dean, recovery found only hope.

[From Hoard's Dairyman]

WASHINGTON DAIRY LEADER

Although burdened with many pressing administrative responsibilities, Senator WILEY in recent years has been one of the United States Senate's most vigorous defenders of the dairy farmer. His work in the 80th Congress last year was primarily responsible for the failure of pro-oleo legislation to pass prior to adjournment.

At the present time he is leading a bipartisan coalition of 27 United States Senators in a hard-fought effort to prevent the passage of the House approved pro-oleo measure. He hopes to substitute the dairy compromise legislation on the Senate floor and secure approval from both Houses of Congress.

[From the River Falls, Wisconsin, Journal of June 28, 1956]

"17½ YEARS OF SERVING WISCONSIN FARMERS"—"THAT'S MY RECORD," SAYS ALEX WILEY

Farmers entitled to fair return

"I am proud to campaign on my record which includes 17½ years of what, most folks say, are solid achievements for our farmers," said the senior Senator who has owned and operated a dairy farm in Barron County for more than 40 years. "But I am sincerely humble. The farmer has had a lot of bad breaks and is truly entitled to everything that I or any other legislator can do in his behalf and in the public interest."

Wiley said that this basically requires "making absolutely sure that our people in America's dairyland get their fair cost of production, plus a reasonable profit. They must get a fair return on their heavy investment—their investment in their own and their family's hard work, their buildings, their machinery and livestock. Too often, our dairymen have been discriminated against in relation to the so-called 6 'basic' crops (which are really not one bit more basic than nature's first food, milk). Too often, our dairymen have been caught in the squeeze of higher costs of feed, machinery and of everything else."

Major Wiley achievements for farmers

Among major past accomplishments listed by Wiley are:

The Wiley St. Lawrence seaway law—generally regarded as the greatest single piece of legislation affecting Wisconsin enacted in the 20th century. The seaway, he said means "low cost transporting of the farmers' products to all the ports of the world."

Wiley antibrucellosis funds legislation.

Wiley school-milk legislation.

Wiley soil bank bill.

Wiley gasoline tax refund bill.

"Every one of the latter bills represent legislation which I personally introduced or cosponsored. Others and I fought hard for this legislation, and together we succeeded in getting it enacted."

Battles currently being fought by Wiley

"Additional legislation which I am at this very minute advancing includes: Provision to distribute surplus food to America's needy; protection of American farmers from the flood of cheap foreign farm imports; establishment of a new dairy-research laboratory at Madison; liberalized credit for farm building repair and improvement.

"Still other objectives for which I am now striving include: Raising of price support for manufactured milk; greater security for elderly, retired farmers by liberalized social security for themselves and their wives; securing greater freedom for Wisconsin's milk to be sold in other States."

Past Wiley battles for milk, cheese, butter

The Chippewa Falls legislator looked back at his 17½ years of past service and recalled these battles:

The struggle for the Wiley dairy amendment to the antioleo bill (an amendment to curb oleo misrepresentation or falsification).

The Wiley efforts against OPA's infamous Plymouth plus—Wisconsin minus order (which almost crucified Wisconsin cheesemaking in favor of production in other States).

The struggle to keep the limited amount of young manpower on our farms and to prevent arbitrary drafting.

Many Wiley efforts for Wisconsin's various foods and its great canning industry—for Badger corn, peas, sauerkraut, as well as for cranberries. (These efforts ranged from getting emergency manpower for harvesting, to getting sufficient steel for tin cans, when they were in desperately short supply.)

Efforts for improving rural health and reducing farm accidents.

Advancing of REA and rural phone legislation.

Defense of vital producing and marketing cooperatives against unfair attacks.

Battles to cut down on the high cost of distribution and thus help raise the farmer's relatively small share of the consumer's dollar.

Senator WILEY also stressed his efforts to get Americans to eat and drink more dairy products.

Boosting Wisconsin dairy products

"In June, Dairy Month, and in all 11 other months of the year, I have been constantly in the forefront of boosting Wisconsin's vitamin-rich, nutritious dairy products. I am proud to be known as the No. 1 booster of Wisconsin cheese in the Nation, and the No. 1 dairyland publicist. I have constantly promoted increased sales of Wisconsin cheese, milk, butter, ice cream, and nonfat dry-milk solids. Dozens of photos in the Nation's newspapers and magazines have shown me helping to spread the Wisconsin dairy habit—to get 167 million Americans to eat, drink, and appreciate our unexcelled dairy products. I started this dairy promotion way back in 1939 when the world's largest cheese, 2,000 pounds, was sent to Washington from our State. It became the focus of nationwide publicity, through which I helped increase consumption of Wisconsin cheese."

Farm groups have praised record

"This then," WILEY concluded, "is my constructive record. It includes solid deeds, not mere words or promises or lip service. It is a record whose achievements have been praised on many occasions by every single major farm organization in our country.

"I feel confident, therefore, that once more, our farmers will overwhelmingly support me."

[From the Juneau County Chronicle]

HONORABLE? THE TITLE FITS THE SENATOR

Senator ALEXANDER WILEY of Wisconsin was the speaker of the evening at a testimonial dinner in Lake Delton Saturday evening. It was given in honor of Miss Isabelle Drumb who is retiring after 20 years as publisher and editor of the Wisconsin Dells Events.

Decorum dictates that the word "Honorable" be used as a prefix to the title of a United States Senator. The conduct of some is such that it raises grave question as to whether the prefix is deserving.

This is not true of Senator WILEY.

In a 20-minute speech he gave glowing tribute to a retiring weekly newspaper publisher without speaking an unkind word about even those few among the newspaper fraternity who have been his critics.

He could have taken credit for steering the St. Lawrence Seaway bill through to passage. He could have taken credit for his opposition to unregulated natural gas rates, and his record on farm legislation; few others under similar circumstances would have failed to preen their feathers just a little bit. But the Senator exercised an admirable degree of restraint, rare indeed among officeholders facing a fight for reelection.

He spoke about the expanding American economy which has grown from $70 billion 17 years ago when Senator WILEY first went to Washington, to nearly $400 billion today.

Yes, the word "honorable" is a befitting prefix to the title of Senator as it is worn by ALEXANDER WILEY. There was more "wheat" in his message and less political "chaff" than any of his audiences had heard from a Senator or Congressman in a long, long time.

The Senator is running for reelection this year, and he will probably have opposition from within his own party. It is particularly refreshing to hear a candidate for office discuss the issues of the day with frankness, dignity, and credit to himself and his party.

[From the Superior (Wis.) Evening Telegram of August 8, 1952]

SENATOR WILEY MEASURES UP

Many important legislative posts have come to him, and he has acquitted himself ably on all of them. He is a former chairman of the Senate Committee on the Judiciary and is now the highest Republican member. Wisconsin citizens will recall the vigorous prosecution he directed as a member of the Senate Special Committee to Investigate Organized Crime in Interstate Commerce.

Always ahead of him was the knowledge that he was responsible to his electors back in his home State. With that in mind he began a long series of services—and they stretched on into an endless chain—with the idea of helping the Nation as a whole and Wisconsin in particular. Seldom did people from his home State arrive in Washington but that the Senator made himself and his office facilities available to them.

Yes, students of government can find in Senator WILEY much to praise. His tenure in office is marked by a long series of outstanding achievements.

LETTER FROM THE WHITE HOUSE, WASHINGTON, MAY 14, 1954

DEAR SENATOR WILEY: Now that the St. Lawrence Seaway struggle is over, I want to thank you for your informed and aggressive leadership in this historic effort. This kind of legislative-executive teamwork in areas vital to all of our citizens is, in my opinion, essential to a sound government and to the welfare of the Nation.

I am very pleased that you were able to move so effectively in helping to make the Seaway at last a reality.

Sincerely,

DWIGHT D. EISENHOWER.

[From the Milwaukee Journal of June 11, 1954]

TRIBUTE PAID TO WILEY FOR SEAWAY LEADERSHIP—SENATOR IS HONORED AT A TESTIMONIAL DINNER FOR SUCCESSFUL BATTLE FOR LEGISLATION

(By Rod Van Every)

Nearly 400 Milwaukee and Wisconsin leaders in industry, civics and Government—Republicans, Democrats and even some Socialists—paid tribute Thursday night to the one man who, more than any other in Congress, worked harder and longer for St. Lawrence Seaway legislation.

The man was Senator ALEXANDER WILEY (Republican, Wisconsin), chairman of the powerful Senate Foreign Relations Committee.

The testimonial dinner, sponsored by the Great Lakes-St. Lawrence Association, the Milwaukee Association of Commerce, and the Governor's Committee for the St. Lawrence Seaway, jammed the Pfister Hotel's fern room.

FROM THE PRESIDENT

There were telegrams of greetings and congratulations. One of them came from President Eisenhower:

"Senator WILEY's leadership in the historic St. Lawrence seaway effort was vital and was deeply appreciated by all in the administration and in the Congress who were identified with it. I am happy that you pay him this honor and thank you for affording me this public opportunity to say so."

From a competing port city, Duluth, Minn., came banker Lewis G. Castle, executive committee chairman of the Great Lakes-St. Lawrence Association. He said:

"Senator WILEY's patience, loyalty, and understanding, his willingness to work at all times and at all hours for this important project has won him many friends and great admiration."

CALLED GREAT CITIZEN

Castle quoted from the CONGRESSIONAL RECORD the senatorial speeches from seaway friend and foe, all praising WILEY's work in the seaway fight.

"Senator WILEY is a great citizen, a great American, a great Senator," he said. "I salute him with personal pride and admiration for all that he has done."

I. R. Witthuhn, president of the Association of Commerce and master of ceremonies, added his praise. So did Dr. N. R. Danielian, president of the Great Lakes-St. Lawrence Association, himself in the front lines of the seaway battle for many years.

"We have gone through a great struggle," said Danielian. "It has taken considerable ingenuity to bring matters to this happy pass. In great measure, Senator WILEY is the man responsible for this happy result.

"Both sides fought hard. The game is over. The issue is settled. It took faith and fortitude to hold to the common cause. Senator WILEY had that faith and fortitude.

"His motivations were love of his country and compassion and sympathy for his fellow men. Our country is grateful for giving us the chairman of the Senate Foreign Relations Committee so he could remold the earth to our desires."

CREDIT FOR EISENHOWER

WILEY pushed the seaway bill out of committee and onto the Senate floor.

"Then we went to work on the personnel of that Senate, and the job was done," he said.

"But without President Eisenhower's inspired leadership the seaway bill never would have passed. Dwight D. Eisenhower is a man of forthright honesty. He frankly wanted the facts on the seaway. We gave him the facts. He promptly made his decision with firmest resolution and gave us the fullest and finest cooperation. His achievement in attaining what no president before him could attain will, I am certain, be one of the great landmarks of his outstanding tenure of office."

WILEY also praised Wisconsin people who "at the grass roots" adopted resolutions for the seaway, wrote letters, visited him and appealed to other Congressmen.

"Many members of that team are here tonight," he said. "Each of them gave of himself selflessly and untiringly. Through years of setbacks, years of disappointments, years of facing what appeared to be hopeless odds, none of you ever gave in.

"What triumphed last May 13 was a great cause, not just a group of individuals; what triumphed were the forces of right, truth, justice and reason over wrong, falsehood, unfairness and illogic."

WILEY said the seaway would be a "shot in the arm" of the Midwest and would form a firmer bond between the United States and Canada.

"But most important of all," he said, "the seaway is a great psychological spur. It is a life to the morale of men. It demonstrates anew that there is no such thing as an end to the economic horizons of America. People say that the frontier is gone. It is not gone. There is a whole new frontier on the Great Lakes.

Lower Tariffs Without Pain

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HAYWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Otto R. Reischer, formerly of Michigan State University and now with American University. This article appeared in the May 1956 issue of Michigan State University Business Topics:

LOWER TARIFFS WITHOUT PAIN

(By Otto R. Reischer)

One of the thorniest conflict-of-interest problems of our time has been that of giving the consumer the benefit of freer trade without seriously hurting domestic industry. Fear of increased imports and inability to adjust to them have created a major obstacle to economic progress both at home and abroad, and the doctrine of comparative advantage has been turned into something only a litle short of mockery.

It is evident that losses to a small group of business concerns inflicted by increased imports are both a real objection and a political obstacle to steps that might be taken in the direction of liberalizing trade. A method that would remove these obstacles, and at the same time vouchsafe to us the benefits of freer trade and lessen resistance to such liberalization, would thus be doubly welcome.

One real possibility of achieving this desirable state of things would be the granting of temporary relief and assistance to those enterprises which in spite of efficient operations have suffered serious injury from increased imports. This article deals chiefly with assistance to industrial enterprises injured by industrial imports only. Assistance to other segments of our economy are briefly considered at the end.

The rationale underlying such a program is briefly this: on the surface, dislocations brought about by increased imports resemble the traditional disturbances created in our economy by the forces of economic progress and technological advancement. But there is a difference, and it is this difference which allows us to argue in support of a Federal readjustment assistance program. Displacement of the horse-drawn buggy by the gasoline-driven automobile is an example of attrition of industry which has its roots in economic and scientific progress. The damage, on the other hand, which is caused by

more imports to certain import-competing industries is thrust upon them by policy decisions taken by the Federal Government. Granted that these policy decisions are taken in the national interest, they are inequitable just the same.

It would of course be unwise to grant companies dispensation from having to adjust their operations to the continuous change in their economic environment; doing that would allow them to sit back and wait for assistance from whatever source it may be forthcoming. But the Government over the years has in fact provided various protective devices for all manners of enterprises, not the least important of which are high tariffs safeguarding domestic industries from harmful competition from abroad. As these safeguards are removed, it behooves the Federal Government to consider what assistance it might provide to these firms in lieu of erstwhile tariff protection to keep them from being pushed to the wall by increased imports and help them to weather this deliberately brought-on emergency.

PROTECTION FOR OUR INDUSTRIES

* * * * *

Three main protective devices are written into existing United States tariff legislation. If these were revoked and abolished, their termination would expose a number of the industries to the vicissitudes of unmitigated competition from abroad. Following are the devices in rising order of importance:

(1) The so-called "flexible tariff provision" (sec. 336 of the Tariff Act of 1930).

(2) The "peril points" provision (secs. 3 and 4 of the Trade Agreement Extension Act of 1951), and

(3) The "escape clause" provision (sec. 7 of the Trade Agreement Extension Act of 1951).

(1) The flexible tariff provision is designed to permit adjustment of tariff rates so as to equalize any differences there might be in costs of production of a commodity in this country and abroad. Essentially the expression of a pious wish, this provision has never helped domestic producers much. Because of lack of ascertainable differences in costs of prodution it is difficult to administer, but even the idea underlying this provision is fallacious, for if foreign and domestic costs were really equalized there wouldn't be any imports at all.

(2) The peril points provision is designed to prevent tariff reductions that would injure domestic producers. This is more realistic than the preceding safeguard in that it sets certain limits to concessions and reductions of rates of duty, but does not aim to exclude imports entirely. The agencies of the executive branch cooperate closely in considering proposed concessions under new trade agreements and exercise caution in determining what concessions can be undertaken.

(3) The escape clause finally remains to be considered. This provision has become the principal means whereby existing United States tariff duties are being raised or kept effectively protective despite reciprocal trade agreements. In order to curtail concessions granted other countries on a certain article, the United States Tariff Commission has to investigate whether the concession to be withdrawn has increased imports to an extent causing or threatening serious injury to the domestic industry. If the Commission finds that injury or the threat thereof exists, it has to recommend to the administration measures with a view to mitigate or forestall such injury: This generally means increasing duties or establishing import quotas.

There have in fact been very few withdrawals of concessions since the escape clause was written into law—six in all, to be exact: Women's fur felt hat bodies, hatters' furs, dried figs, watches and watch movements, bicycles, and alsike clover seed. But escape-clause proceedings have afforded considerable indirect protection for domestic industry. They have discouraged potential imports. They have dampened incentives to develop export industries abroad. And foreign producers as well as American importers are justifiably afraid that any change in the composition of the bipartisan six-man Tariff Commission could encourage new investigations. * * *

Although the devices provided by existing legislation are not so watertight as to keep out all imports, they afford a good deal of protection, and any loosening-up would mean uncovering a number of sensitive import-competing industries, to their detriment. Thus a change in American policy bringing about such a loosening-up patently calls for the Federal Government to intercede and provide assistance toward readaptation.

Accelerated readjustment: An added reason for governmental action in this field is that assisted readjustment will facilitate the transition to freer trade. A carefully designed and efficiently administered program of systematic assistance (not subsidization) would be of great help in inducing business affected by increased imports to carry out necessary readaptation and diversification of production processes more quickly than otherwise. This accelerated tempo of readjustment also would tend to cut down the losses suffered by import-competing industries without impairing a freer exchange of goods.

* * * * *

A WORKABLE PROGRAM

Such a program must be centered in the individual business firms directly injured by increased imports. Workers employed by the firms and communities in which the firms are located, are affected by increased imports only indirectly. The immediate cause of distress of both workers and communities, if attributable to foreign competition at all, will be found in the failure of business firms to adjust to increased imports. In times of relative prosperity, displaced employees can usually be shifted rather speedily to similar lines of work. This leaves the entrepreneur to be looked after. The American businessman who bears the brunt of intensified imports competition would wish for a program consistent with a free-enterprise system: financial assistance, expert advice, and the like. The program discussed here would fill the bill.

In this connection, another consideration has to be kept in mind. The more closely a readjustment assistance program is focused on the individual firm, the less costly it is likely to be in money terms, and the more easily it can be administered. In making liberal allowances to enterprises for assistance toward making such readjustment, no additional burden for the taxpayer must be created, or the value of the entire program would be nullified. Application of readjustment measures becomes essentially a problem of how to create the appropriate incentives for businessmen to make necessary changes in their operations as fast as possible.

In drawing up such a program one will have to decide between gradual and accelerated readjustment. It will of course be extremely difficult to find a generally acceptable formula for an optimal rate of adjustment. With deserved attention to the technical and economic features of enterprises and industries being helped, a proper solution must take account of the requirements of organic growth of those particular segments of the economy.

* * * * *

Aid to individual firms: There need be no programs of area development nor assistance specifically directed toward communities. Not only is this type of support in existence already, but it is being fully implemented by the United States Department of Commerce and Labor, by the Office of Defense Mobilization, and by State and local economic development bodies. Nor ought readjustment assistance to workers as such to be programed, except in cases where firms are forced into liquidation because of injurious import competition. Existing facilities of social security and unemployment benefits and old-age and survivor insurance could be made more liberal to help workers in distress generally, but any such broadening of benefits should include all other persons entitled to these services.

* * * * *

A prime advantage of concentrating readjustment assistance on the individual enterprise is that the administrative problem of ascribing injury to competitive imports, rather than to other factors, will already have been solved by the Tariff Commission in the course of its investigation in connection with applications for relief under the escape clause. In omitting communities as direct-aid recipients, a further administrative simplification is achieved. Even in a depressed one-industry community there always are many lines of causation leading to economic dislocation; and these lines often are not even remotely connected with intensified import competition. If, therefore, no Federal special-purpose assistance for communities is programed (other, that is, than aid granted business firms which happen to be located there), there is no point for neatly separating causes underlying economic distress with a view to determining eligibility for assistance of prospective recipients.

The task of untangling the skein of diverse harmful influences may actually prove even simpler than that. It can be shown, for instance, that the traditional distinction between interregional and international competition ceases to have any useful meaning under certain conditions, and that these conditions happen to prevail right now.

THE PROBLEM OF INTERREGIONAL COMPETITION

In current discussions the term interregional competition has come to have a rather special meaning. It connotes a trend of industry moving south, especially from the Northeast, in response to various locational stimuli. Included in these inducements are availability of sites and buildings, tax concessions, and lower labor costs owing to the prevalence of right-to-work (antiunionization) laws in a number of Southern States.

Leaving aside the question of whether these stimuli are natural or merely contrived to cloak real disadvantages of location, what concerns us here is the alleged difficulty of distinguishing between the incidence of interregional and international competition. The distinction is of course admissible in theory. From a practical standpoint, however, the two diverse influences need not be separated at all. The Tariff Commission, in finding injury in any particular escape clause investigation, has had to consider the entire respective domestic industry. Therefore the losses to any old segments of such industry could be offset by gains made by new segments. A finding of injury is thus based on averages, and marginal producers still are obligated to improve their efficiency if tariffs are gradually to cease equalizing the imported and the domestic price of a given commodity.

Interregional adjustments moreover take place in response to temporal regional differences, many of which are self-liquidating. (In this connection it is worth noting that interregional movements can be influenced more easily in a constructive manner than international movements; all that can be done to influence the latter is to raise or lower trade restrictions.) The objection to a readjustment assistance program based on the impossibility of differentiating between the effects of interregional competition as

contrasted with those of international competition thus is in fact invalid.

* * * * *

THE FORUM OF THE READJUSTMENT ASSISTANCE PROGRAM

What would be the actual shape of the program? A program of readjustment assistance devoted primarily to relieving individual business enterprises of distress caused by increased imports would provide assistance mainly in the form of loans designed to ease transition to more efficient and profitable operations.

For a variety of reasons, the Export-Import Bank appears to be the most appropriate instrument for handling credit needs of firms requiring medium-term financial assistance (from 3 to 5 years) where credits are not available from private sources. The bank's activities and experience would appear to fit it well for this new assignment. At present the Export-Import Bank makes loans primarily with a view toward enabling purchases abroad of United States machinery, equipment, materials, and services for some specified project or use abroad. Where projects are involved they must provide both an immediate market for United States goods and assist in developing the borrowing country into a greater market for United States products, or a supplier for United States import needs. As trade is further liberalized, more foreign producers would become suppliers for United States import needs. In assisting such a development through the medium of a readjustment assistance program, the Export-Import Bank would pursue one of the functions assigned to it by law in an enlarged frame of reference. The Export-Import Bank also has been traditionlly concerned with foreign economic operations and increased trade. And of the latter a readjustment assistance program, if adopted, would tend to become an inescapable corollary. Furthermore, the law setting up the Export-Import Bank specifically states that the bank is "to aid in financing and to facilitate exports and imports." Imports in this connection are not legally limited to strategic raw materials and related types of products. Therefore, and in view of the fact that readjustment assistance would facilitate imports indirectly, the Export-Import Bank, in helping to finance the program, would only be performing its original function.[1]

The Small Business Administration too would have a part in the program, albeit of a somewhat more subsidiary nature: Chiefly for liquidation loans, the activity to be patterned on SBA activities in disaster and catastrophe lending operations. The Department of Commerce would have an opportunity of administering Regulation V type loans and accelerated amortization of enterprises investments necessitated by readaptation. Technical services as provided by the Departments of Commerce and Labor, where such services would have to be expanded from their current level, would be financed by customs revenues earmarked on the model of funds set aside under section 32 of the Agricultural Adjustment Act of 1935.

Where use in a readjustment assistance program of the technique of loan guaranties under regulation V is indicated, needed funds would also be earmarked from customs revenues. Loans actually made would be guaranteed by the Department of Commerce and the Export-Import Bank would act as fiscal agent.[2]

* * * * *

At the center of the program would stand the United States Tariff Commission. A finding of injury by the Commission would trigger the mechanism of readjustment assistance. The Commission would be authorized to recommend such a program as an alternative to restoring tariff concessions under an escape clause or peril-point action. To permit product diversification and other necessary adaptations which require time to become effective, the Commission's finding of injury and recommendation of assistance in some cases could also be accompanied by a restoration of the concession for a limited period of time (say 2 or 3 years), perhaps on a sliding scale downward.

Putting the Tariff Commission into the center of this program with corresponding additional responsibilities may require more personnel for the Commission. Such added staff would be grouped into a Readjustment Section newly to be created. Officials in that Section could draw upon professional talent in the other divisions of the Commission as well as on the appropriate specialists of other Government departments and agencies. The functions of the new Section would be purely advisory and it would service a standing committee, to which recommendations concerning readjustment assistance originating with the Tariff Commission would be submitted. On the standing committee would serve, in addition to representatives of the Tariff Commission (one acting as chairman), representatives of agencies most familiar and most directly concerned with the problems of the particular industry to be assisted. Three elements of primary responsibility would be involved in the operation of this standing committee. These would be delegated among the departments and agencies of the executive branch as follows:

1. Determination of need for and extent of assistance and referral: Tariff Commission.

2. Rendering of technical assistance: Departments of Commerce and Labor.

3. Financing of loans and technical services:

(a) Treasury Department: Earmarking of customs revenue.

(b) Export-Import Bank: Medium term readjustment loans.

(c) Small Business Administration: Readjustment loans for small business and liquidation loans for marginal producers.

Agencies of secondary responsibility in this connection would be the State Department (through its International Cooperation Administration), and the Departments of Defense; Agriculture; Interior; Health, Education, and Welfare; and the Executive Office (through the International Division of the Bureau of the Budget).

Within the standing committee, a steering group consisting of representatives of the Tariff Commission, the Department of Commerce, and the Export-Import Bank would be established to expedite proceedings of the committee. The steering group would have powers to coordinate agency functions and force action to be taken if necessary.

For several of the agencies involved in the administration of the proposed program, some modification in normal functions would be required. These are: the Tariff Commission whose activities would be widened in a manner already noted; the Export-Import Bank which receives one additional function in addition to those already carried on aside from the primary functions assigned under the Export-Import Bank Act of 1945; and the Small Business Administration, in connection with liquidation loans to marginal producers. Since aid to marginal producers in most instances will also require assistance to workers employed by them, the Department of Labor, in addition to its consultative responsibility for the entire program area, would enter the picture in making effective aid available to such workers. These workers would receive priority treatment under existing social security and unemployment benefit regulations. No additional administrative machinery would be required, however.

* * * * *

Once assistance has been granted, it would be desirable to require assisted enterprises to submit to annual reviews during the transition period. The readjustment section of the Tariff Commission would be responsible for such audits. These would parallel the annual reviews now conducted by the Tariff Commission on commodities on which duties have been raised under the escape-clause provision of the Trade Agreements Act of 1951.

* * * * *

One important feature of the readjustment-assistance program discussed in this article remains yet to be mentioned. It is versatility. The program here outlined would in essence be applicable to all types of imported commodities, industrial, agricultural, mineral. The only variation necessary, in the case of agricultural and mineral imports, would be a change in the guaranteeing agency and in the type of earmarked funds. For agricultural imports, funds from the Department of Agriculture set aside under section 32 of the Agricultural Adjustment Act of 1935 would be utilized, and the same department would act as guarantor of the loan. For a program relating to mineral imports, the Department of Interior through the Bureau of Mines would have jurisdiction over the financial aspects of the program, arrange for earmarked funds, and act as guarantor. The rest of the apparatus would remain unchanged.

[1] If legislation were introduced in Congress with a view to setting up the financial portion of a program of readjustment assistance, the intent of Congress underlying the setting up of the Export-Import Bank in the first place would have to be reexamined. However, a parallel problem of reexamination or reinterpretation of congressional intent would have to be faced if SEA were to fulfill the functions here assigned the Export-Import Bank.

[2] Under the Defense Production Act, the Federal Reserve banks act as fiscal agents for V loans.

Alaska Mental Health Facts and Fantasies

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mrs. GREEN of Oregon. Mr. Speaker, so much nonsense and absurdity has been peddled about the Alaska mental health bill that it seems necessary, once again, patiently to state the facts that are obscured by all this fantasy. I know no better or more objective statement of the facts than the article by A. Robert Smith in the June 28 Reporter magazine. Mr. Smith has followed this legislation closely from the beginning and is thoroughly familiar with the entire story. Under unanimous consent, I include his article in the RECORD:

SIBERIA, U. S. A.

(By A. Robert Smith)

Of all the areas under the United States flag, Alaska has unquestionably been the most neglected in the field of mental-health reforms. Under its archaic insanity laws laid down by Congress more than half a century ago, any Alaskan who becomes mentally ill can be admitted for treatment only after (a) being taken before a lay jury and tried in a criminal proceeding, in which he is adjudged guilty or innocent of insanity; (b) clapped into the local jail if found in-

sane; and (c) subsequently taken in the custody of a United States marshal to a private mental hospital at Portland, Oreg. Many patients never see a doctor until they reach Portland. Frequently they are transported along with criminals the marshal is delivering to the nearest Federal prison at Tacoma.

As time and civilization moved forward in Alaska, and mental-health reforms began to win adoption in their States, Alaskans began to petition Congress to institute hospital facilities for patients in the Territory.

For the past 7 years, Alaska's Delegate in the House, E. L. (BOB) BARTLETT, had tried to bring this hope to reality, only to be thwarted for various reasons. He came close in 1952, but the bill was sidetracked by the objection of the Congressman from the Oregon district in which the Portland hospital is located. Alaska got the break it was seeking last year when two newly elected Democrats from Oregon, Senator RICHARD L. NEUBERGER and Representative EDITH GREEN, announced their support for BARTLETT's long-standing proposal.

Then the Department of the Interior, which administers much of Alaska's affairs, and the Department of Health, Education, and Welfare jointly recommended a 10-year plan to provide Alaska with its own mental-care facilities, reform the procedures for admitting patients for treatment, and authorize Federal grants-in-aid to get the program going until Alaska could carry it.

Vigorously backing the administration's more far-reaching plan, Mrs. GREEN and BARTLETT pushed it through committee with the cooperation of Congressman LEO O'BRIEN, Democrat, New York, chairman of the House Territories subcommittee. Its only opponents were people acting on behalf of the Portland hospital. They contended "Alaska isn't ready" to take over the program. Alaska's Gov. B. Frank Heintzleman said the Territory was ready and waiting. The House passed the bill without a dissenting vote and the outlook was for clear sailing through the Senate.

TO ARMS

There is in Burbank, Calif., a group of a hundred or so housewives organized as the American Public Relations Forum, Inc. It so happened that APRF received from an Alaskan friend a copy of the Alaska bill. As the group's president, Mrs. Stephanie Williams, later told a Senate committee, her ladies were dedicated to studying bills that Congressmen are too busy to analyze for themselves—a kind of home guard in the legislative wars.

The field of mental-health legislation was a familiar battleground to the Forum. Mrs. Williams claimed major credit for a campaign last year that defeated a bill in the California Legislature to establish State mental clinics in local communities. She had plenty of help—from an old political associate, ex-State Senator Jack Tenney; from pro-America; and from other lesser-known groups. Apparently feeling the impact of this blast from the extreme right against the mental-health bill, Gov. Goodwin Knight came out against it.

The issue became a battle cry. Tenny, in his newsletter, shoved those who advocate mental-health reforms into a class with Communists. Another newsletter publisher, Robert H. Williams, of Santa Ana, headlined one of his editions as follows: "Mental Health Propaganda Preparing Way for Jailing Anti-Communists as Mental Cases." Williams told his readers:

"For many years the revolutionaries, especially those in the Zionist power movement, have made clear, either by direct statement or by their obvious buildup to this end, that they want to make anti-Semitism a crime and intend to brand all opponents (bigots and anti-Semites, as they call their opponents) as mental cases and send them to insane asylums."

SPREADING THE WORD

So the forum housewives sniffed through the 43-page Alaska bill like bloodhounds. They found that:

The governor of Alaska may enter into reciprocal arrangements with the governors of the States for treatment or transfer of patients. (This is to provide for immediate care of Alaskans who may be taken ill when outside the Territory until they can be returned to Alaska, or vice versa for residents of the States who might happen to fall sick in Alaska. It also provides for reciprocity payment pacts between the Territory and the States of the type that is common today between many States for meeting the cost of temporarily treating nonresidents.)

Alaska would be given a Federal land grant of a million acres from the 375 million acres of Federal lands in the Territory. This would be similar to land grants given Utah, Oklahoma, Idaho, Wyoming, and South Dakota, when they obtained statehood, to provide revenue for State mental hospitals. The same idea was applied to most western States, which received public land grants to provide school revenues.

But to Mrs. Williams and other ladies of the forum, this combination of provisions had only one interpretation: The governor of any State could dispatch anyone found to be mentally ill to Alaska, where he would be confined on a vast reservation that would be in effect a concentration camp.

Last January, the forum spread the alarm. Its bulletin said the bill "could apply to all Americans, especially those who have been active against the New Dealers and their schemes to make this country into a member of world government and reduce us to slavery."

The Santa Ana Register picked up the theme with an editorial entitled "Now—Siberia, U. S. A." printed just a few days after the House passed the bill on to the Senate.

"Under the terms of the bill," the newspaper said, "a fair question to ask would be this: 'Is it the purpose of H. R. 6376 to establish a concentration camp for political prisoners under the guise of care and treatment of mental cases?' The answer, based on a study of the bill, indicates that it is entirely within the realm of possibility that we may be establishing in Alaska our own version of the Siberia slave camps run by the Russian Government."

Soon Siberia, U. S. A. was being printed all over the country in various extreme right-wing publications, among them Gerald L. K. Smith's The Cross and the Flag, The Dan Smoot Report, The Green Mountain Rifleman, and The Greater Nebraskan. Such groups as the For America League, Women for God and Country, and the Women's Patriotic Conference on National Defense took up the cry. Dan Smoot warned that mental-health reforms "would permit seizure, incarceration, and treatment of mentally ill people without trial by jury and without due process of law prescribed by our Constitution," though even a casual reading of the bill would have shown that it provided the right of habeas corpus and the right of trial by jury for anyone believing himself to have been wrongfully committed. And every patient wishing to fight his commitment is guaranteed an attorney, who can appeal the jury's decision if need be all the way to the Supreme Court.

MARCH ON WASHINGTON

Strange allies were lined up together. Flailing away against the bill shoulder to shoulder with the Tablet, a Catholic weekly newspaper published in Brooklyn, was the perennial Vice Presidential candidate of the Prohibition Party, Gen. Herbert C. Holdridge, who pinned the "plot of wickedness" behind the bill on the "black forces of the Jesuits who dominate the Vatican." In the same alliance were others who blamed it all on the Zionists.

Quite an expeditionary force turned up in Washington last February when the Senate Subcommittee on Territories and Insular Affairs held hearings on the bill. Before a standing-room-only crowd, the committee heard out the protesters, Senator ALAN BIBLE, Democrat, Nevada, who presided, concluded at length: "It is abundantly clear * * * that no one possibly could be sent out of any State to Alaska and committed to a mental hospital there."

Mr. Williams, the Santa Ana publisher, pulled out a book by Dr. Harry A. Overstreet, entitled "The Great Enterprise," and claimed that the author said that anyone who is "angrily against race equality, public housing, the TVA, financial and technical aid to backward countries, organized labor, is well along the road toward mental illness." Williams' analysis may have triggered his attack, for, according to the Santa Ana Independent, he is a "purveyor of hate" and a "baiter of Jews and seller of maligning words for dollars [who] is busy in Santa Ana planting seeds of hate." The Los Angeles Daily Mirror once described him as "a homegrown hatemonger" whose specialty is "fraudulent" charges against our Jewish citizens.

Williams was by no means alone in trying to convince the lawmakers that there was a Jewish plot behind the mental-health movement. John Kasper of Merchantville, N. J., noting that Sigmund Freud was a Jew, testified that "I think it is important to realize that about 80 percent of * * * the psychiatrists are Jewish." To this reporter, Kasper, owner of a bookstore in Washington, D. C., later added the observation that relatively few Jews wind up in mental institutions.

THE AAPS

Groups that took the trouble to examine the bill came out in its favor, including the American Medical Association, the American Psychiatric Association, and the National Association for Mental Health. Indeed, one conservative newsletter, Challenge to Socialism, published in Washington by Dr. Marjorie Shearon, undertook to buck the entire propaganda campaign against the bill by circulating factual accounts of its provisions. Her main effort was directed toward trying to convince the Association of American Physicians and Surgeons (AAPS) for which she had been the adviser on congressional affairs for a number of years, that it had made a mistake in joining the other attackers.

Of all the organizations that joined the attacking forces, AAPS was probably the most notable. Formed 13 years ago to fight socialized medicine, it now has doctor committees in 45 States and a membership of 10,000 physicians and surgeons. From the outset its Chicago headquarters issued repeated bulletins denouncing this incredible bill, saying "it is impossible to describe all [its] horrendous provisions."

In spite of the explanations that Dr. Shearon sent along from Washington, AAPS refused to retreat and admit it had been hoodwinked on the Siberia charge. Dr. Shearon, who then quit AAPS in disgust, put it this way:

"AAPS appears to have been the largest professional group to be sucked in. Neither the AMA nor any State or county medical society fell for the Siberia line. The American Academy of General Practice, second largest medical society in the country, did not get on the Siberia bandwagon. AAPS was wholly irresponsible in misleading the public. It refused to retract when the Alaska Territorial Medical Association asked it to do so."

AND THE LUNATIC FRINGE

AAPS's refusal to retract appears to go well beyond the plain embarrassment of admitting a blunder. A top AAPS official, in a letter to an associate, explained the organization's dilemma as follows:

"When you are espousing a rightwing cause you are apt to attract a fairly sizable lunatic fringe which has to be kindly dealt with, if for no other reason than to keep them from going over to the enemy. This is just simple realism.

"There isn't any use denying it, a great many people who are on our side aren't there because of any sound and sincere belief in our principles, but rather because they conceive our side of the argument to be the one that is to their personal and often pecuniary advantage. Nonetheless, when you are in a war you have to take what allies you can find."

GOLDWATER TO THE RESCUE

After hearing all the witnesses with judicial patience, the committee received 2 substitute bills from 2 of its members. One of them, sponsored by Senator GEORGE W. MALONE, Republican, Nevada, was purportedly written by Kasper, the embattled bookstore owner, who claimed authorship of "every word of it." The second, sponsored by Senator BARRY GOLDWATER, Republican, Arizona, was designed to placate the opponents of the original bill.

Although none of the Senators had expressed any misgivings about the original bill, Goldwater's bill turned out to be a workable compromise. It would authorize mental hospitals for Alaska but do nothing about modernizing commitment procedures. This latter responsibility would be tossed to the Territorial legislature.

The heaviest opposition died away. The AAPS, which had refused to retract its attacks on the original bill, came out in support of the Goldwater measure. In a letter to the committee, the president of AAPS, Dr. Charles W. Pavey, of Columbus, Ohio, said that "it was extremely unfortunate that there was so much intemperate expression on both sides of this matter."

John Kasper, the bookseller, had embarked on another mission and could devote little time to the Alaska bill. He had formed, he was pleased to announce, the first white citizens' council in the Nation's Capital, with the objective of reversing progress toward racial integration (schools, restaurants, hotels, and playgrounds are all integrated in Washington now), getting the National Association for the Advancement of Colored People on the Attorney General's list of subversive organizations, publicizing commercial contributors to NAACP and the Urban League, and wiping out "rock 'n' roll" music.

And so in mid-June, no longer hampered by sensationalized opposition, the Senate passed the Alaska mental-health bill without dissent after a 10-minute debate.

The National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 5, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present the following report which I made as president of the National Rivers and Harbors Congress at the 43d annual convention held at the Mayflower Hotel, Washington, D. C., on May 11–12, 1956:

REPORT OF THE PRESIDENT, REPRESENTATIVE OVERTON BROOKS, OF THE NATIONAL RIVERS AND HARBORS CONGRESS, TO THE 43D ANNUAL CONVENTION, AT THE MAYFLOWER HOTEL, WASHINGTON, D. C., MAY 1956

Ladies and gentlemen of the convention, it now becomes my duty to make a report concerning the activities of the congress during the year since we last met on May 31 and June 1, 1955, for our 42d national convention. I am happy to report that we have had a fine year marked by progress in every direction toward our goals.

Our 42d annual convention achieved a new high in enthusiasm for conservation of water resources. An outstanding event in the organization's long history of accomplishment, the gathering attracted 346 registered delegates from 44 States, Alaska, Hawaii, Puerto Rico, and the District of Columbia. There were many additional unregistered guests and representatives of press and radio. Louisiana led the States in number of delegates, with 57; North Carolina was second, with 28; and Michigan was third, with 20.

During consideration at the Capitol of the public works appropriation bill for fiscal year 1956, a delegation from our organization appeared at the hearings to present its recommendations to the House committee. The delegation included your president, the projects committee chairman, Representative SID SIMPSON, and vice chairman, H. H. Buckman, of Florida; the resolutions committee chairman, Representative FRANK E. SMITH, of Mississippi, and vice chairman, E. W. Rising, of Idaho; and the executive vice president, William H. Webb.

When the bill was reported to the House by the Appropriations Committee on June 10, reducing the budget estimates of President Eisenhower by 28 percent, the largest cut made in any appropriations bill to that date, Representative SIMPSON and I joined in an invitation to all Members of the House of Representatives to a meeting in the Old House Office Building caucus room to take action toward restoring the budget figures.

This meeting was very largely attended by both Republicans and Democrats. After a full discussion, four resolutions were adopted unanimously, pledging support to amendments to increase the amounts in the bill for construction and planning of flood control, navigation, and irrigation projects.

Such amendments were accordingly prepared in consultation with the House legislative counsel, and when the bill came to the House floor the following day, all four amendments were adopted by very large majorities, increasing the amounts by more than $88 million. They provided the full amounts requested in the President's budget message, and also the full amounts recommended by the House Appropriations Committee for 12 projects not included in the budget estimates.

Shortly thereafter a delegation from our organization called on the Chairman of the Public Works Appropriations Subcommittee of the Senate, the senior Senator from Louisiana, Senator ALLEN J. ELLENDER, to present the reports of our projects and resolutions committees which had been recently adopted at our 42d annual convention. Senator ELLENDER gave us a very fine reception and assured us that he and his committee would give sympathetic consideration to our recommendations.

Subsequently the Senate, following the recommendations of its appropirations committee, increased the amounts for fiscal year 1956 by more than $100 million over the amounts recommended by the budget and the House Appropriations Committee. Finally, the conference committee reached an agreement on an amount slightly less, viz, $590,251,500 for the civil functions of the Army engineers, or for rivers and harbors and flood control projects, as compared with $560 million recommended by the budget and $500 million recommended by the House Appropriations Committee.

This was a splendid victory after a long and arduous campaign, and one for which our organization may rightfully take a large share of the credit.

In November of last year when the budget estimates for the year 1957 were under consideration, a delegation from the National Rivers and Harbors Congress called at the Budget Bureau to present our recommendations to officials of the bureau. These recommendations embodied as a goal a long-term program of internal water development in the United States of $1 billion per annum.

The delegation recommended that $750 million be included in the budget figure for 1957 for rivers and harbors improvement and flood control and $250 million for irrigation and reclamation. It urged that there be a continuation of the administration's policy of new starts and that an adequate amount be included for planning and general investigations, and maintenance of completed projects. I took occasion to point out the action of the Congress last year in increasing the budget recommendations and stressed the general feeling throughout the country that there should be provided additional sums for general internal improvement, including the development of our water resources.

The President's budget message to Congress in January of this year recommended $583,997,000 for the civil-works program of the Corps of Engineers in fiscal year 1957. In the general construction program, funds were requested for 39 new starts and 3 resumptions of construction, in addition to 30 small authorized projects, and continuing projects, and 1 new start in the requested funds for the Mississippi River and tributaries flood-control project.

The first test of the sentiment in Congress toward our program came early in this year when the Appropriations Committee of the House reported out an urgent deficiency appropriations bill for fiscal year 1956, and slashed $3,046,000 from the amount requested by President Eisenhower for flood control in the New England States, New York, and Pennsylvania. The committee also knocked out $330,000 recommended by the President for a complete review of existing flood-control plans in the Northeastern States.

The Capitol Hill battle for flood-control appropriations found the National Rivers and Harbors Congress stanchly supporting the stricken New England areas, and when the vote was taken in the House, the action of the Appropriations Committee was reversed and the amounts recommended by the President were restored to the bill. This action was subsequently approved by the Senate and the bill was approved by the President on February 14 appropriating the full amount requested by the Army engineers and recommended by the Budget Bureau.

So we have started this session of Congress with another splendid victory, and shall hope for continued success in the weeks to come.

A special meeting of your board of directors was called by me for January 21 in this city, and was attended by a majority of the members of the board. The board studied copies of the President's report on water resources policy, recently submitted to Congress, and took especial note of the comments on user charges on water transportation, which our organization has consistently opposed for many years. The board meeting received reports from various officers which showed gains in membership and the treasury, and found encouragement in many directions of its overall program. During the board's meeting, a proposal for the establishment in Washington of a permanent headquarters building was laid before the directors by Mr. H. H. Buckman,

consulting engineer of Jacksonville, Fla., and one of our oldest directors in point of service. A special committee appointed by me has been studying this matter and may be ready to report to the meeting of the board of directors scheduled to follow our adjournment today.

During the past year, two regional conferences were held in the New England region, one in Hartford, Conn., in October of 1955 and one in Boston, Mass., in April of this year. A regional conference was also held in the South Atlantic region at Raleigh, N. C., in February of this year. Our regional directors for the New England and South Atlantic regions will report to us later in the day concerning these conferences and the splendid work which has been carried on in their areas.

Our projects committee has also been at work during the past year on a method of procedure to be followed by it and by the organization in following up its recommendations and rendering assistance to the proponents of the many hundreds of projects which have been processed by that committee. We shall anticipate the recommendations of that committee with keen interest and hope that we shall be able to work out a procedure and policy which will contribute to advancing the interests of the various projects and speeding their construction.

A membership certificate was designed and has now been furnished to every individual and organization maintaining an active membership in the congress, as evidence of their active participation in the work of the organization. It is hoped that these certificates will be found suitable for framing and displaying in the offices, or other suitable place, of the members. Additional new members are constantly being added to the rolls so that we will soon reach an all-time high in number of members as well as in total membership dues. During the calendar year 1955 our total receipts were nearly $27,000, and the indications are that this will be exceeded during the present year. We still have quite a ways to go to reach the goal of $50,000 per annum set by our board of directors some time ago, but we shall continue our efforts in this respect.

And now in closing, may I say just a word about our congress. As most of you know, it is the oldest and most influential organization in its field. Originally organized at Johns Hopkins University in Baltimore, Md., in October, 1901, it is now entering upon its 54th year of service to the Nation. It is generally agreed by those who know of its work that America owes her present system of improved harbors and waterways directly to the efforts of the congress. Through the years, the organization has cooperated closely with the United States Congress which has always received its recommendations and advice and gives a ready ear to its counsel.

The congress is dedicated to the sound and orderly development of our water and land resources for all beneficial purposes, and the approval of worthy and meritorious projects throughout the country. It provides a forum for discussion of all problems relating to land and water development and use, serves as a clearinghouse for coordinating the activities of local and sectional organizations, and affords a means for securing united action by all the interests concerned with the various phases of land and water conservation. Its work has been endorsed by every President of the United States from Theodore Roosevelt to Dwight Eisenhower. Its members are located in every State in the Union.

At the last session of Congress, it was successful in increasing the appropriation for flood control, navigation, and reclamation by nearly $100 million, and it will continue its efforts in the present session to see that an adequate amount is provided in view of the recent devastating floods and the continuing need for improved navigational facilities.

Members of the National River and Harbors Congress, we are now in a new age, when scientific progress and development have almost outstripped the human imagination. New problems have arisen and new methods of approach which would solve the old problems have been worked out, often scientifically. Almost every speaker who has addressed this convention of the National Rivers and Harbors Congress has referred to the increasing water shortage throughout the United States. This naturally leads to speculation as to how such shortages might be relieved. Of course, you may apprach this problem from the viewpoint of reclamation and irrigation. I, however, have been convinced that further scientific studies regarding artificial rainmaking, hurricane control, and conversion of sea water into fresh water may be of great scientific benefit to this country. I do not necessarily believe that any one of these matters has yet been brought to the point that it is practicable and feasible at the present time.

More attention, however, should be given by Congress and by the executive branch of Government to these matters, and with increased experimental effort it is entirely possible that water shortages may be relieved through the development of these types of projects.

We all know with what devastating effect Hurricane Hazel and other hurricanes struck the Atlantic seaboard. We know that these turbulent conditions, through use of proper experiments, might be reduced in devastation and perhaps in some way used for the benefit of mankind. In a like manner, projects for water conversion have reached a point where the important question is the cost of taking the saline content out of salt water and thereby making it fresh water and fit for human consumption and industrial purposes.

The tremendous development of the H-bomb and the A-bomb bring forth other problems which may affect our weather and disturb rainfall over wide areas. It is yet too early to draw conclusions from scientific findings in this respect, but it is known that contamination may cover great areas and the upset condition of the atmosphere may result in tremendous precipitation. It is even suggested that a contamination of water reservoirs in farflung areas might result from these explosions. All of these problems are new and tax the brains of the best scientists which we have available. They present challenge to the Government for proper solution.

We have now crossed the threshold of the last half of the 20th century. There are 20th-century, or even 21st-century, problems. They are problems to which we may close our eyes temporarily but they are not problems which in the long run can be sidestepped or evaded by Congress, by the executive branch of Government or by our population. Survival of a nation and normal methods of living throughout the world are going to be affected by these matters until scientific solutions, backed up with proper governmental guidance, give our people the support to which they will be entitled.

Social Security

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. GAVIN. Mr. Speaker, I take this time to make a few observations on social security as we find it operating in our country today. I have watched its growth and progress since the first social-security bill was enacted into law in 1935—21 years ago.

Yes; we have come a long way in that short time. The immensity of the program is staggering to the average mind. Of the some 62 million employed citizens in our country some 52 million are under coverage by some phase of our social-security system, and others are continually being added.

The social-security reserve fund now totals approximately $21 billion, the largest reserve fund in the history of all time. Just what do these astronomic figures mean in terms of our individual and collective well-being?

First, I believe it is an attempt and to some extent a remedy to alleviate the fear of destitution and dependency in old age.

Second, generally speaking, it is a form of insurance where the premiums are paid by both employer and employee. They are paid willingly and rather painlessly.

Third, it has been accepted by the American people and is now a part of our American way of life.

Mr. Speaker, we may not agree with all the provisions of the Social Security Act, as amended, but whether we like it or not, it is here to stay. For many years to come any new features, changes, or alterations will, in my opinion, come within the framework of the Social Security Act of 1935.

One phase of the social-security program which I have been especially interested in is that of old-age assistance. This involves that group of our elder citizens who are in the declining years of their lives are destitute and needy. In most cases through no fault of their own they find themselves without funds or means of living. They have no insurance, no social security, and because of age and disability unable to work or hold a job. When and if they declare themselves paupers, they may receive what is known as old-age assistance. This small pittance only helps to keep body and soul together. There are slightly more than 2½ millions of these senior folks who are getting an average throughout the country of $54.07 a month.

The State matching system under which old-age assistance operates poses some flagrant inequities which I feel should be corrected. For instance, I find that in my own State of Pennsylvania the average payment to those on old-age assistance is $46.40 a month. New York pays $82.66 a month; while West Virginia—the lowest—pays $28.48 a month.

Certainly, Mr. Speaker, no one would agree that a person could live in common decency on these meager pittances. Inasmuch as their needs grow greater as they advance in age and because of the increased cost of living, I feel that the plight of this group presents an emergency. I appeal to the proper committee of the House and to the Congress to give this situation their careful attention. If at this late day in the present Congress we find it impossible to correct this glaring inadequacy, let us determine now to make it one of the first orders of business in the next Congress.

In conclusion, I want to call attention to the fact that America has lead all nations in many fields of progress. In science, invention, and modern industrialism we have been outstanding but in some of the humanitarian aspects of life we have been only average. There are about 50 countries in the world that have general old-age pension programs. Some are generous, some are scant. Twelve countries retire men at 65 years and women at 60, and 11 countries retire both men and women at 60. I am glad to note that the social security amendments before the Congress now would retire our American women at 62 years of age.

Our national social security together with our many special industrial pensions and other benefits of a public nature has given old age some measure of protection in contrast to 21 years ago. Let us all be thankful for what has been accomplished in this great humanitarian field.

Two Million Acres Cropland Signed Under 1956 Acreage Reserve Program

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news release from the United States Department of Agriculture:

TWO MILLION ACRES CROPLAND SIGNED UNDER 1956 ACREAGE RESERVE PROGRAM AS OF JULY 6

Nearly 2 million acres of cropland had been signed up by farmers under the 1956 acreage reserve program of the soil bank by the end of the first week in July, according to preliminary reports which have been sent to the United States Department of Agriculture by State Agricultural Stabilization and Conservation offices.

"We have rapidly made this program available in every agricultural county of the United States," said Acting Secretary True D. Morse. "This report indicates widespread interest in the soil bank and makes it clear that farmer-committeemen have moved rapidly to put the program into operation. Complete regulations covering the acreage reserve for 1956 are in the hands of the State and county committees."

Payments farmers can earn for compliance with acreage reserve provisions for the acreage included in the agreements signed through the first week in July total a little more than $37 million.

Only farms with corn base acreages or allotments for wheat, cotton, rice, peanuts, or tobacco are eligible to participate in the acreage reserve program, which is designed primarily to reduce current production of these six basic crops. Because the program did not become available until so late in the planting season, participation for 1956 is expected to be much lower than the goals which will be established for 1957 and later years of full operation.

More complete reports will be issued as further information is received from the State committees. Final date for signup under the 1956 acreage reserve is July 20.

A summary of preliminary and incomplete information from those State ASC committees which have reported, for the period from the start of signup in late June through July 6, follows:

Commodity	Number of acres	Payments
Corn	693,433.3	$27,089,932.43
Wheat	1,120,817.6	6,964,056.25
Peanuts	1,596.1	19,536.40
Rice	1,112.4	53,999.48
Cotton	86,681.4	2,011,875.39
Tobacco (total)	4,368.38	889,012.24
Flue cured	2,251.07	475,239.22
Burley	141.62	17,784.87
Maryland	528.04	74,182.84
Dark air cured		
Virginia sun cured	535.67	67,444.00
Fire cured	135.63	21,386.00
Types 51–52	658.85	216,318.31
Types 54–55	118.00	16,657.00
Total	1,908,009.18	37,028,412.19

Loyalty of Persons Holding Nonsensitive Government Positions

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 18, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bad Company," published in the Pittsburgh Sun-Telegraph of July 14, 1956. The article relates to a position taken by the Bar Association of New York City supporting the theory that no inquiry should be made concerning the loyalty of persons holding so-called nonsensitive positions in Government.

The Sun-Telegraph editorial, commenting on this theory, said:

There is no such thing as a nonsensitive job for a real Communist in Government.

I commend the reading of the editorial to all Senators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BAD COMPANY

The Bar Association of New York City, by supporting the theory that no inquiry should be made concerning the loyalty of persons holding so-called nonsensitive positions in Government, has lent itself to an utter absurdity and a dangerous one.

It has put itself into a ridiculous and indefensible position.

The whole matter becomes incomprehensible in the light of the fact that the study upon which the recommendation is made by the association was financed by the Fund for the Republic, Inc., which has failed before and often in its efforts to persuade the American people to the same belief.

Why should any American hold Government employment with immunity to inquiry concerning his loyalty to the United States?

Why should any loyal American ask that immunity for himself, or defend or excuse it when sought by others?

It is true that the Supreme Court of the United States has held it to be the intent of Congress that freedom from loyalty inquiry is the right of the nonsensitive.

But the Congress already is moving swiftly to negate that untenable opinion, and the whole weight of the Eisenhower administration is behind the movement.

If loyalty to America cannot be made a condition of Federal employment, what safeguards are left against our enemies?

It is blindness to our greatest national danger that suggests that the enemies of America have the right to a foothold in the structure of Government.

As W. R. Hearst, Jr., said in his Editor's Report in the Sun-Telegraph, the differentiation between those capable of harm and those incapable of it in Government employment is self-deceit at best and deliberate fraud at its worst, and:

"There is no such thing as a nonsensitive job for a real Communist in Government."

Communists do not have to be in the highest ranks of Government to achieve their evil purposes.

The most menial places in Government may serve them very well.

But even if it should be possible to isolate the disloyal, what right in patriotism or morals or plain commonsense have they to sustain themselves at the expense, if not the actual peril, of the people of the United States?

The basic two conditions of acceptance into the ranks of public service must always be the capacity to do the job well and the utter incapacity to betray the Nation to its enemies.

It is a turning of backs upon these essential facts in which the Supreme Court and the New York Bar Association have joined, and in very bad company.

Pension Program for Veterans of World War I

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HENDERSON. Mr. Speaker, I have filed today under clause 1 of rule XXII a petition signed by 600 residents of Muskingum County, Ohio, situated in the 15th District which I have the honor to represent. This petition was forwarded to me urging immediate enactment of a separate and liberal pension program for veterans of World War I and their widows and orphans. The members of the Muskingum County Barracks 454, World War I Veterans have been instrumental in presenting this petition. It is the program of this organization that World War I veterans have reached the position in life where they are deserving of consideration and treatment on an equal basis with the aging veterans of previous wars in our Nation's history and in line with established American traditions. It is the expressed feeling of this organization that the time has come when the needs of the veterans of World War I require treatment different from that accorded veterans of the more recent wars. It is my sincere hope that the appropriate committee and the Congress continue to acquaint itself with the needs of this group of patriotic Americans which will result in the enactment of appropriate legislation.

Daily Digest

HIGHLIGHTS

Senate passed measures on customs simplification and atomic energy, and debated Hells Canyon project.

House unanimously adopted resolution opposing Red China's admission to U. N. and passed bill on agricultural trade development.

Senate committees approved numerous bills and nominations.

House committee approved liberalized civil-service retirement bill.

Conferees agreed to file reports on medical research and CCC borrowing power bills.

Chamber Action

Routine Proceedings, pages 12031–12059, 12235

Bills Introduced: 8 bills and 1 resolution were introduced, as follows: S. 4237–S. 4244; and S. Res. 316.

Page 12044

Bills Reported: Reports were made as follows:

H. R. 9918, authorizing negotiation and execution of a contract with Riverside Irrigation District, Idaho, relating to the rehabilitation of the district's works (S. Rept. 2618);

H. R. 8474, to quiet title regarding certain property in Alabama (S. Rept. 2619);

H. R. 9591, relating to acquisition of non-Federal land within existing boundaries of any national park (S. Rept. 2620);

Report of Committee on Government Operations on East-West trade, with minority views (S. Rept. 2621);

S. 4243, relating to compulsory inspection of poultry and poultry products (S. Rept. 2622);

S. 4221, to amend the International Wheat Agreement Act of 1949 (S. Rept. 2623);

H. R. 11947, to amend and extend for 2 years the Renegotiation Act of 1951, with amendments (S. Rept. 2624);

S. 4215, authorizing sale of certain vessels to Brazil (S. Rept. 2625);

S. 3831, to provide for the establishment of a fish hatchery in West Virginia, with amendment (S. Rept. 2626);

H. J. Res. 613, relating to expenses in connection with chartering of merchant ships under jurisdiction of the Secretary of Commerce (S. Rept. 2627);

H. R. 9801, authorizing construction of bridge over Panama Canal at Balboa, C. Z. (S. Rept. 2628);

Report of Joint Economic Committee entitled "Defense Essentiality and Foreign Economic Policy—Case Study—Watch Industry and Precision Skills" (S. Rept. 2629);

S. 3827, to authorize the construction of a shellfish research laboratory and experiment station in the Chesapeake Bay area, with amendment (S. Rept. 2630);

S. 4012, conveyance of certain public lands in Nevada to Colorado River Commission of Nevada acting for State of Nevada, with amendments (S. Rept. 2631);

H. R. 11554, to facilitate private financing of passenger vessels (S. Rept. 2632);

S. 1256, to provide for the appointment of additional circuit and district judges, with amendments (S. Rept. 2633);

S. Res. 73, referring to Court of Claims, S. 542, private bill (S. Rept. 2634);

S. 3593, relating to recognition of organizations of postal and Federal employees, with amendments (S. Rept. 2635);

S. J. Res. 177, authorizing Secretary of Commerce to sell certain war-built tankers, with amendments (S. Rept. 2636);

H. R. 604, to provide port-of-entry and related facilities on the Alaska Highway at the Alaska-Canadian border (S. Rept. 2637);

H. R. 8226, to amend act of March 4, 1915, so as to reserve certain lands in Alaska for public-school purposes (S. Rept. 2638);

H. R. 10946, relating to disposition of surplus personal property to Territorial government of Alaska (S. Rept. 2639);

H. R. 11024, relating to fees of certain commissioners for Territory of Alaska (S. Rept. 2640);

H. R. 4096, to provide for the disposal of public lands within highway, telephone, and pipeline withdrawals in

Appendix

Report of National Projects Committee to the Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the report of the National Projects Committee, which was unanimously adopted by the recent 43d national convention of the National Rivers and Harbors Congress held in Washington on May 10–12, 1956.

The permanent National Projects Committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in line for approval. The projects recommended by the committee and endorsed by the congress are vigorously pressed for inclusion in the Government's public-works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public-spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The members of the committee who served at its recent session follow:

NATIONAL RIVERS AND HARBORS CONGRESS

National Projects Committee: Representative SID SIMPSON, of Illinois, chairman.

New England Division: Fred E. Bergfors, president and general manager, Quincy Oil Co., Quincy, Mass.

North Atlantic Division: Brig. Gen. James H. Stratton, United States Army (retired), consulting engineer, New York, N. Y.

South Atlantic Division: H. H. Buckman, consulting engineer, Jacksonville, Fla., vice chairman.

Southwestern Division: Dale Miller, executive vice president, Intracoastal Canal Association of Louisiana and Texas, Houston, Tex.

Lower Mississippi Valley Division: Hu B. Myers, chief engineer, department of public works, State of Louisiana, Baton Rouge, La.

North Central Division: Al Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River Division: John B. Quinn, executive vice chairman, National Resources Development Association, Inc., Lincoln, Nebr.

Ohio River Division: J. I. Perrey, chief engineer, Indiana Flood Control and Water Resources Commission, Indianapolis, Ind.

North Pacific Division: Harold B. Say, manager, Washington office, Portland, Oreg., Chamber of Commerce.

South Pacific Division: Col. Thomas J. Weed, transportation counsel, city and county of San Francisco, San Francisco, Calif.

Western Inter-Mountain Region: E. W. Rising, Washington representative, State Water Conservation Board of Montana, Helena, Mont.

REPORT OF THE NATIONAL PROJECTS COMMITTEE TO THE 43D NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 12, 1956

Hon. OVERTON BROOKS,
President, National Rivers and Harbors Congress, Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the president, your projects committee met on May 10, 1956, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 14 proposals embracing all resource improvements with which this Congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, this committee is convinced that 17 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $249,416,998. Ten proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on six proposals, surveys have been authorized but the reports on such surveys have not been completed and we therefore recommend in these cases that the Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this congress. We find six proposals, which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization. Of the proposals investigated, we find two are without necessary data or sponsorship to enable the committee to reach a reasonable conclusion on their worth. However, we desire to give the applications sympathetic consideration, and, if possible, offer to the proponents the services of this Congress in reaching a solution to their problems. We have, therefore, not classified these but have suggested that the secretary communicate with the applicants concerned and request additional data upon the receipt of which further consideration will be given to their proposals.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

As the members of this congress know, the Committee on Public Works of the House of Representatives is currently holding hearings on navigation, flood control, beach erosion control and multiple-purpose survey reports which have been submitted to the Congress by the Secretary of the Army since enactment of the 1954 river and harbor flood-control bill. These reports contain proposals for the construction of water resource development projects throughout the Nation. Formulation of these proposals into an omnibus rivers and harbors and flood-control authorization bill, and ultimate enactment into law will be a valuable addition and supplement to the presently authorized program. Some of the pending recommendations are of high importance to the Nation's expanding economy, and should be provided as soon as possible.

Your projects committee recommends that the Congress and the President of the United States be requested to give every consideration to early approval of this highly important legislation and to the appropriations of the necessary funds for the planning and construction of these projects. Since passage of the last act, Congress has considered 2 navigation projects and 1 flood control project estimated to cost $320 million which have been authorized. Funds have been included in the President's budget for fiscal year 1957 for initiation of planning and construction on two of these projects. A total of 42 reports are now under consideration by the House Public Works Committee in the formulation of the bill; 20 are flood control projects estimated to cost $475 million; 16 are navigation projects estimated to cost $20 million and 6 are shore protection projects costing an estimated $4½ million. In addition there are about 42 favorable reports of all types in various stages of processing to Congress having a total estimated cost of about $250 million.

During the intervening time since our last meeting there has been much activity in connection with Federal civil works construction and investigation program and in the field of water resources policy. Destructive floods have occurred in the Northeastern States and west coast States which have emphasized the fact that the controlling of floodwaters and putting them to beneficial use is far from complete. The damages from these unprecedented floods and hurricanes in the Northeastern States far exceeded those of record, being estimated at more than $700 million with more than 200 lives being lost. These damages would have been much larger had not some of the authorized flood control projects been constructed. The floods in California, Oregon, and Nevada of last December caused an estimated damage of $150 million. Some of the constructed flood control projects in these areas prevented more extensive damages. Much remains to be done in the field of flood control, particularly in the determination of the feasibility of projects for the prevention of flood damages. In recognition of these problems and the need for an adequate flood control program for the areas damaged, the 84th Congress has passed legislation authorizing and directing that survey investigations be made to determine practical means of reducing the loss of human lives

and damages to property. Investigations have also been authorized to study hurricanes, to include methods for forecasting their paths and improving warning services and types of structures at coastal locations to prevent damages and loss of lives. It is evident, therefore, that the development of plans for the control of floods and minimizing the destructive force of hurricanes are of paramount importance. In this connection we must never for one moment lose sight of the objectives of the National Rivers and Harbors Congress in supporting this great program of water resource development.

Although much work remains to be done in the field of water resource development throughout the country, we feel that the problem is being expertly handled by the Federal agencies in cooperation with the States concerned. The need for full scale development of our water resource program is greater today than ever before. The projects committee, therefore, considers it highly important that sufficient funds be provided in order that the Federal agencies can carry out their respective water resources program in an orderly fashion. Your committee is concerned over the large backlog of investigations authorized by Congress to be carried out by the various Federal agencies and recommends that appropriations be increased at this time in order that the backlog be reduced and that a reserve of projects may be built up for activation at such time as the economy of the Nation demands.

The committee renews its previous observations with respect to the essentiality of recognizing the strategic values of our waterways. The basic importance of transport in time of war increases steadily with the integration of the civil and military war effort. The transportation resources of the United States, rail, water, highway, air, and pipeline, are not adequate in time of war, and become dangerously inadequate when coastwise shipping is curtailed.

To remedy this situation, there is necessary a peacetime growth of the transportation network. There does not appear any probability of the economical expansion of the rail network. All other forms of transport are subject to economical peacetime expansion in greater or lesser degree. Of all these, inland water transport affords the most important opportunity for achieving a system (including all forms) that will be adequate in wartime.

There are two Websterian definitions of the term "strategy." The more narrow of these is "the science and art of military command, exercised to meet the enemy in combat under advantageous conditions." The broader meaning is "the science and art of employing the armed strength of a belligerent to secure the objects of a war." It is in this latter sense that the committee applies the term "strategic" to our inland waterways, and their increase and improvement.

The committee is convinced that legislation that will make mandatory the inclusion of such strategic value, wherever it is found to exist, in all appraisals of waterways and proposed improvements thereof, is a need of the first importance. We are not unaware of the difficulty of drafting such legislation, nor of the fact that, as in certain other legislative fields, intangible values cannot be reduced to dollars and cents without recourse to arbitrary criteria. However, it is the opinion of the committee that such difficulties are not insurmountable, and they stand ready to assist Members of the Congress of the United States in drafting provisions that will rationally and equitably accomplish the desired end.

Respectfully submitted.

SID SIMPSON,
Chairman.

NOTE A.—A project which has been placed in class II, III, IV, or V by the committee may be reexamined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.

NOTE B.—Attention is called to the fact that when a project is once put in class I—endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new applications. All projects endorsed by the Congress, upon the recommendation of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

APPENDIX A

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE

[Letter "R" following the project number indicates revision of a previous application]

CLASS I.—*Projects endorsed*

Endorsed: This means that the committee is convinced that the project is sound, needful and sufficiently advanced in status, and should be promptly constructed in the public interest.

Docket No.	Name of project	State	Division	Docket No.	Name of project	State	Division
119-R	Lake Charles-Calcasieu River and Pass Ship Channel.	Louisiana	Lower Mississippi Valley.	1036C	Lower Cumberland	Kentucky and Tennessee.	Ohio River.
843-R-3	Levees East of Chandlerville (Sangamon River).	Illinois	North Central.	1037	Jamaica Bay	New York	North Atlantic.
852-AR3	Norfolk Harbor	Virginia	North Atlantic.	1038	New Jersey Pierhead Line Channel; New York Harbor: Entrance channels and anchorage areas.	New Jersey	Do.
852-BR3	Thimble Shoal Channel	do	Do.				
860-R2	South Channel: New York Harbor entrance channels and anchorage areas.	New York and New Jersey.	Do.	1041	Dillon Dam	Ohio	Ohio River.
				1042	Oscoda Harbor of Refuge	Michigan	North Central.
875-R4	Whitewater River East Fork at Brookville.	Indiana	Ohio River.	1043	Whitefish Point Harbor of Refuge	do	Do.
1036A	Lower Cumberland	Kentucky and Tennessee.	Do.	1044	Harrisville Harbor of Refuge	do	Do.
				1049	Removal and control of sedimentation, St. Lucie River.	Florida	South Atlantic.
1036B	do	do	Do.	1050	New York State barge canal	New York	North Atlantic.

CLASS II.—*Projects classified as meritorious*

Meritorious: This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and open for further consideration by the committee.

Docket No.	Name of project	State	Division	Docket No.	Name of project	State	Division
508-R	Salem Harbor	Massachusetts	Northeast.	890-R2	Kahului Harbor improvements	Territory of Hawaii.	South Pacific.
770-R2	Saginaw River	Michigan	North Central.				
793-R3	Cleves flood-protection project	Ohio	Ohio River.	932-R	Pepperell Cove, Kittery, dredging of Chauncy Creek.	Maine	Northeast.
883-R2	Improvements to channels and turning basins of San Juan Harbor.	Puerto Rico	South Atlantic.	1036	Connecticut River basin flood control (Littleville Dam).	Massachusetts and Connecticut.	Do.
888-R2	Long Beach, Plymouth Harbor	Massachusetts	Northeast.	1045	Beaufort Harbor	North Carolina	South Atlantic.
				1048	Grand River at Lansing	Michigan	North Central.

CLASS III.—*Expeditious Report on authorized survey requested*

Expeditious report on authorized survey requested: This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.

Docket No.	Name of project	State	Division	Docket No.	Name of project	State	Division
978-R	Preliminary examination of southern branch of Elizabeth River, Norfolk Harbor.	Virginia	North Atlantic.	1046	Channel from Pamlico Sound through Core Sound to Beaufort Harbor (wide channel at sea level).	North Carolina	South Atlantic.
979-R2	Ocracoke Inlet	North Carolina	South Atlantic.	1047	Thoroughfare Bay from Core Sound to Cedar Bay near the mouth of Neuse River.	do	Do.
1008-R	Calcasieu low-water dam	Louisiana	Lower Mississippi Valley.	1051	Port Mansfield	Texas	Southwest.

CLASS IV.—*Projects recommended for survey*

Recommended for survey: This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Docket No.	Name of project	State	Division	Docket No.	Name of project	State	Division
671-R	New River dredging	Florida	South Atlantic.	1035	Intracoastal Waterway (Boston-Long Island Sound).	Massachusetts and Rhode Island.	Northeast.
1033	Drum Inlet (deepening and stabilization).	North Carolina	Do.	1039	New York and New Jersey Channels.	New York and New Jersey.	North Atlantic.
1034	Saw Mill River, Bronx River, and tributaries flood control.	New York	North Atlantic.	1040	Hudson River Channel	do	Do.

Bayonne Naval Supply Depot Doing More Work With Less Men—An Outstanding, Efficient, and Competent Command

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. SIEMINSKI. Mr. Speaker, Capt. Ignatius N. Tripi, United States Navy, will soon leave the United States Naval Supply Depot at Bayonne, N. J., as its commanding officer. We in the 13th Congressional District are losing a most efficient, capable, and outstanding officer.

During the past quarter, the depot was designated as the eastern area alternate emergency load list supply point for medical and dental materials and for special shipboard electrical fittings and fixtures. This command also was assigned to provide additional supply support and transshipping services to Naval Station, Bermuda, for ships store stock available in and around the New York area.

In the coming quarter, the depot will assume responsibilities as a supply distribution point for forms and publications to vessels and activities in the Third Naval District and as a processing point for electronic repair parts allowance lists to naval shipyards, New York, Boston, and Philadelphia and to industrial managers in the First, Third, Fourth, and Ninth Naval Districts. This command also will assume supply support of naval activities in Puerto Rico for freeze and chill subsistence stores. It is anticipated that an average of 120 measurement tons of such stores will be shipped monthly in furnishing this support.

Under terms of the transshipping agreement with the Department of the Army, it is anticipated that approximately 33,000 measurement tons of chill and reefer-type cargo will be loaded at the depot for delivery to Army commands overseas. In addition, it is estimated that the depot, as eastern area buildup activity for ordnance fire control repair parts sets, will effect the buildup of approximately 50 sets as requested by the Ordnance Supply Office.

Despite assumption of the new responsibilities, no significant increase in personnel is anticipated. As of July 1, 1956, the depot authorized ceiling for civilian personnel was 2,687. The on board count as of that date was 2,669.

Both the Captain and Mrs. Tripi have immeasurably contributed to the betterment of our community. They have been most active in our Community Chest, in our Red Cross, and in those various programs that mean so much to small municipalities. Mrs. Tripi's great interest in civilian defense, and the classes that were arranged by the women in this program, has been most gratifying. We, in the 13th district, will miss the Captain and Mrs. Tripi. They made it easy for the civilian population to understand the Navy Department and its problems.

Mr. Speaker, as you know, there has been great labor unrest in the Port of New York. Sometimes there were strikes, but through all of this labor difficulty, not once did the union men working at the Bayonne Naval Supply Depot ever leave their jobs. The Depot remained open and was operated at full capacity when the entire Port of New York was closed by a paralyzing port strike. Captain Tripi kept the base humming through all of this. He saw to it that food and material continued to go overseas to our troops.

We have had some great commanders at this base: Rainey, Boundry, Haynsworth, and Captain Tripi joins this illustrious group. We are thankful to Rear Admiral R. J. Arnold, Chief of the Bureau of Supplies and Accounts, Department of the Navy, for sending Captain Tripi to us. We feel badly that he has to leave us, but that is the way of the Navy and we can only accept it. The inspiring leadership that Admiral Arnold gives to the Bureau of Supplies and Accounts is exemplified by Captain Tripi's work at the base.

We join with all his friends from the Thirteenth Congressional District of New Jersey in wishing Captain Tripi well. May his future endeavors keep Captain Tripi climbing, as have his past.

We wish him godspeed.

Eighty-fourth Congress Record in Behalf of Farmers

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. COOLEY. Mr. Speaker, I report proudly to the House that our Committee on Agriculture has handled in the 84th Congress the heaviest legislative workload ever undertaken in any Congress in behalf of the farmers of America.

With this Congress not yet ended, more than 800 bills have been referred to our committee. The content as well as the number of these bills reflects great concern in the Nation over the recession in agriculture that again has brought hard times to our farms, at the very time when the rest of our economy enjoys great prosperity.

The number of bills handled is about double the 423 referred to us in the 83d Congress, and compares with the total of agricultural measures in previous Congresses as follows: 82d, 175 bills; 81st, 396 bills; 80th, 208 bills; 79th, 208 bills; and 78th, 200 bills.

Our committee has had 19 subcommittees at work studying and refining this record number of agricultural bills, and these subcommittees as well as the full committee have conducted many special studies into ways of improving our agri-

cultural economy. These committees have held almost 300 hearings, and the full committee has reported 103 bills, of which 52 already have become public laws. We have disposed of virtually all of the 800-plus bills referred to us, approving the best, consolidating the good points of others, and rejecting or passing over others. In the latter category there were a number of good bills that require further study, before Congress can act upon them.

Mr. Speaker, while for each of the 11 years—1942–52 inclusive—our farmers had received average prices at 100 percent of parity or better, by the beginning of 1955, when this Congress convened, these prices had fallen far below a full parity relationship with the rest of the economy and farm income continued in a downward and devastating spiral. The average of farm prices had dropped 22 percent below the level of February 1951. Net farm income in 1954 had dipped about 30 percent under the income of 1947. The parity ratio was at the lowest level since 1941. Farm operating costs remained near record highs, and farm debt was increasing. Farmers' purchasing power had declined to the lowest level since 1940.

Our Committee on Agriculture, which it is my honor and privilege to serve as chairman, immediately set to work, in January 1955, to stem this new recession in agriculture, with the firm and resolute purpose of putting our farmers and their families again on the road toward income parity with our nonfarm population.

The most apparent and the most effective action open to this Congress, for quick relief of the farm distress, was to undo the damage of the Agricultural Act of 1954 which required that flexible—lower—price supports should be applied to the major crops.

This Congress approved H. R. 12, calling for an end to the downward flexing of prices; but we were thwarted and defeated by a Presidential veto. The will of the Congress did not prevail, as the President exercised his constitutional powers to reject H. R. 12. This will mean a loss of many millions of dollars to our farm families this year and it is my judgment thta the veto has delayed a recovery of the farm economy.

Mr. Speaker, our fight was not in vain. Notwithstanding the veto, the Members should feel great pride in the record of this Congress in its accomplishments for agriculture. Our fight for 90 percent of parity forced Mr. Ezra Taft Benson, the Secretary of Agriculture, to raise the low prices he had set for the 1956 crops. As example, the Secretary had announced the support for wheat at $1.81 a bushel—76 percent of parity. This price was raised to $2 a bushel, or 84 percent of parity. The corn support was increased from $1.40 a bushel to $1.50, rice from $4.04 per hundredweight, to $4.50. The dairy supports were increased. Supports for oats, rye, barley, and grain sorghum were lifted from 70 to 76 percent of parity. I believe our effort also brought about better supports for cotton and peanuts than Mr. Benson otherwise would have proclaimed.

This record of the 84th Congress bespeaks a deep interest in the people who till the soil.

The Congress established a $1,200,000,000 soil bank.

It enacted various legislation to protect the interests of small farmers and the rights of tenants and sharecroppers.

It improved the agricultural credit system, with special emphasis on the well-being of family-operated farms.

It improved the machinery for disposal of our farm products abroad.

It opened wider the doors of our warehouses to provide food for needy people in our own country.

It advanced research in agriculture.

It enacted legislation and appropriations to expand and improve rural electrical and telephone service.

It expanded the program to provide milk for millions of schoolchildren.

It improved and extended the Sugar Act, in a way to give our own cane and beet producers a larger share of the American sugar market.

It made great advances for the improvement and conservation of our soil and water resources.

It authorized the greatest appropriation of funds of any Congress in our history for agriculture.

It repealed the Federal tax on gasoline used in farming.

Mr. Speaker, through all our efforts you will find one purpose overshadowing all others—that is: To perpetuate and strengthen the family farm and the rural community economic and social order that is indispensable as a source of spiritual, social, and political vitality in our growing Nation.

And, Mr. Speaker, I want to assure my colleagues here, and the farmers and, indeed, all the American people, that the fight for fair treatment of our farm families will go on. Of necessity, it must go on. The interests of all our citizens requires that this fight continue.

Following is a review of enactments thus far in the 2d session of the 84th Congress relating to agriculture:

THE AGRICULTURAL ACT OF 1956—PUBLIC LAW 540

1. SOIL BANK

This act sets up a $1,200,000,000-a-year soil bank, in two parts:

(a) Acreage reserve. This program is designed to reduce acreages of wheat, cotton, corn, peanuts, rice, and tobacco. Payments to farmers are made to reduce their acreages of these crops below their acreage allotments, and these payments may be made as soon as the acreage is measured. Under this authority, the Department of Agriculture has set up 1956 rates of payment per acre, on a national average, as follows: Corn, $40.05; cotton, $45; wheat, $19.80; rice, $59.22; peanuts, $27; flue-cured tobacco, $255.42; and burley tobacco, $295.74. A maximum of $750 million a year could be expended on the acreage reserve for the next 4 years.

(b) Conservation reserve. This program is designed to remove acreage from crop production on a semipermanent basis, for which payments approximately equivalent to the rental value of the land would be made, with an annual national limit of $450 million.

Compulsory features, proposed in other soil-bank legislation, were not included in H. R. 12—vetoed—or in H. R. 10875 which became Public Law 540. Limit is placed on the amounts that can be spent on specific crops, thus assuring an equitable distribution of funds. Provision is made for the protection of tenants and sharecroppers. Procedures are provided for appeal by producers whose soil-bank contracts have been canceled because of alleged violations.

The act directs that the soil bank be commenced with 1956 crops, with a clear Congressional intent that the fact that some crops had been planted at the time of enactment is not to stand in the way of starting the program this year.

Many Members of Congress are disappointed with the manner in which this program is being administered. The Secretary has discriminated against those farmers who need the benefits of this program most: namely, those farmers whose crops have been ruined or damaged by drought or flood. It was the clear intent of the Congress to pay farmers who plowed up their crops on a basis of the average yield of the land, but the Secretary has adopted an "appraised" yield payment plan, knocking down the level of payment to take into account any weather or other natural damage to the crops on the land put into the acreage reserve. Thus, where the average yield base might mean a payment of $45 an acre in cotton the Secretary actually is paying as low as $6 under his improvised "appraised" yield. Similar trimming down of payments has occurred in wheat and other crops.

The major objective of the soil bank and other provisions of the act, relating to surplus disposal and to marketing quotas and acreage allotments, is the adjustment of production to market needs, reduction of the surpluses, conservation of soil and water, and the general improvement in farm income.

2. CORN

The act authorizes four different programs under which corn farmers may receive price supports in 1956, as follows:

(a) Producers in the commercial area who elect to comply with the acreage allotments previously announced by the Secretary—at the rate of approximately 43 million acres—are eligible for price supports at $1.50 per bushel—86.2 percent of parity—under that program, without putting land into the soil bank.

(b) For the operation of the soil bank the bill increases the corn acreage allotment for 1956 by 9 million acres to a total of 51 million acres. Corn producers in the commercial producing area may qualify for price supports at $1.50 per bushel—86.2 percent of parity—by planting within their allotment from the 51 million-acre base acreage, provided they put into the soil bank an amount of cropland equal to 15 percent of their base acreage of corn.

(c) Producers in the commercial corn area who do not comply with the regular acreage allotments previously announced nor with the base acreage setup for soil

bank purposes will still be eligible for price supports, under the noncompliance program newly announced by the Secretary, at the rate of $1.25 per bushel—about 83 percent of the support level of compliance corn in the commercial area.

(d) Producers outside the commercial area will receive a support at 82½ percent of the level of the support for compliance corn in the commercial area—or about $1.24 a bushel.

(e) The Secretary is directed, not later than December 15, 1956, to conduct a referendum of producers in the commercial corn area to determine whether they favor the present acreage allotment and price support program or would prefer to do away with acreage allotments completely and then let the Secretary fix the corn price support at such a level as he determines "will assist producers in marketing corn in the normal channels of trade but not encourage the uneconomic production of corn." If two-thirds or more of producers voting approved the change, corn then would be removed from the list of basic crops for price support purposes, and the support level thenceforward would be at the discretion of the Secretary, as has been the case in the small feed grains and in other crops.

3. FEED GRAINS

The act sets the price support for the 1956 crop of grain sorghums, barley, rye, and oats at 76 percent of the parity price for each commodity as of May 1, 1956. Thus, the 1956 supports are: Barley $1.02 per bushel; oats 65 cents per bushel; rye $1.27 per bushel, and grain sorghums $1.97 per hundredweight. These higher level supports thus supersede the 70 percent supports announced by the Secretary, which were 93 cents for barley, 59 cents for oats, $1.16 for rye, and $1.80 for grain sorghums.

4. COTTON

(a) A freeze of 1957 and 1958 national acreage allotments at no less than the 1956 allotment; (b) a provision that no State acreage allotment can be cut in 1957 and 1958 by more than 1 percent; (c) a special 100,000-acre national reserve is created to add to the allotments of small farmers; and (d) the Secretary of Agriculture is directed to sell Government cotton for export at the price necessary to regain America's traditional world market at around 5 million bales annually.

A program has been put into effect to make cash payments on the export of cotton textiles and cotton waste, to equalize the competitive position of our own cotton textile mills with foreign mills in the use of American cotton.

The act requires that whenever the price of either cottonseed or soybeans is supported, the price of the other shall be supported at a level which will cause them to compete on equal terms in the market.

Solution of our market problems, particularly in cotton textiles, will be substantially assisted by authority clearly given the President in this act to negotiate voluntary agreements with representatives of other countries with respect to importations into the United States of competing agricultural commodities or products made therefrom.

5. RICE

The act provides that the State acreage allotments for rice for 1956 shall not be less than 85 percent of the final State allotment for 1955; and that the national acreage allotments of rice for 1957 and 1958 shall not be less than the final national allotment for 1956, and shall be apportioned among the States in the same manner as the 1956 final allotment. The act provides a certificate program for rice, at the discretion of the Secretary. The certificate program will not be substituted for the present program unless the Secretary determines and proclaims that the initiation of the problem is "administratively feasible and in the best interests of rice producers in the United States."

6. TRANSITIONAL PARITY

The act freezes transitional parity for the basic commodities for 1957. This will mean that the parity price of corn, wheat, and peanuts—the only 3 basic commodities currently affected by the transitional parity formula—will be 5 percent higher in 1957 than they otherwise would have been. The bill also requires the Secretary of Agriculture to make a thorough study of possible methods of improving the parity formula and to report to Congress thereon not later than January 31, 1957, and to include drafts of any legislation needed to carry out this recommendation.

7. GOVERNMENT-OWNED LANDS

The President is directed to restrict insofar as practicable the leasing of Government-owned lands for the production of price-supported crops in surplus supply.

8. SECTION 32 EXPANSION

Appropriation of an additional $500 million annually is authorized for section 32 funds, for use in surplus removal and disposal operations, particularly for perishable commodities. The section 32 program previously has operated on funds derived from an allocation of 30 percent of duties collected under the customs laws, amounting to approximately $200 million annually. The authorization of a $500-million appropriation, in addition to the amount available from a share of the customs collections, will bring to about $700 million annually the funds available for this program which acts as a substantial price stabilization mechanism for various crops, as well as serving the needs of the school lunch program, making food available for low-income persons and generally aiding in the disposal of surpluses.

9. FORESTRY

The act authorizes broad expansion of cooperative activity between the Federal Government and the States in reforestation. Upon presentation by the proper State official the Secretary of Agriculture is authorized to approve a plan for tree planting within the State and thereafter to cooperate technically and financially in such program. With respect to parts of the program carried out on non-Federal lands, the Federal financial contribution cannot exceed that of the State toward the same program. The secretary is directed to cooperate with other Federal agencies and with the appropriate State forester in approving and carrying out such plans.

10. OTHER IMPORTANT PROVISIONS

The act embraces various improvements in the disposal of surplus commodities and other significant provisions.

To facilitate surplus disposal in the United States, the Secretary of Agriculture is authorized to process food commodities, such as grain, into a form—meal or flour—which can be used in the home and is also given authority long sought by both the State and the Federal Government to denote food commodities to certain penal institutions.

To facilitate surplus disposal abroad, the President is given authority to pay ocean freight on surplus commodities donated for use in other countries and to step up disposal under title II of Public Law 480 from $300 million to $500 million.

The act authorizes the appointment of a Surplus Disposal Administrator in the Department of Agriculture.

Provision is made for the appointment of a commission to study and make recommendations to Congress on increased industrial use of agricultural products.

In addition to these specific new authorizations to deal with the surplus problem, the Secretary is directed to make a study of proposals for disposing food domestically through some kind of food-stamp plan; he is directed to report to Congress within 90 days on this important matter; he is directed to make a similar study and report on the matter of establishing strategic stockpiles of agricultural commodities both in the United States and abroad for use in the event of war or similar emergency; he is directed to use existing authority of the Commodity Credit Corporation to dispose of surpluses generally and long-staple cotton specifically.

An attack is made upon the surplus problem affecting long staple cotton by again placing extra long staple cotton, now exempt from quotas, within the quota set up for all cotton longer than 1⅛ inches.

In order to encourage further the underplanting of acreage allotments, the act authorizes a producer, for the first time, to plant only a part or even none of an acreage allotment for three successive years without losing his history and the right to future allotments. This could eliminate the practice of planting merely to retain history for allotment purposes, which is now required.

To make present production adjustment laws more effective, the bill increases to 75 percent of the support price the penalty for exceeding peanut-marketing quotas.

SUGAR

Public Law 545, H. R. 7030, reenacts and extends for 4 years, to December 31, 1960, the Sugar Act of 1948, as amended, with further amendments to, first, give domestic cane and sugarbeet producers a fair share of the growth of the United States sugar market; second, bring about a more equitable participation by foreign suppliers in this market; and third, maintain stability of sugar supplies and prices in the United States.

The Sugar Act is one of the most successful of our farm programs, in terms of benefits to producers and dependable supplies at stabilized prices for consumers. Sugar consumption continues to soar under this program. The United States now consumes over 8,500,000 tons of the approximately 40 million tons annual world production, and the consumption is increasing by more than 135,000 tons a year.

This is because the Sugar Act maintains a fair price to housewives, while giving a fair return to producers.

Public Law 545 provides that domestic producers may supply 55 percent of the growth in the American market, in addition to the approximately 4,500,000 tons annually already allotted to them.

This participation by the United States sugar producers in the future market growth restores to them the status they had under sugar-quota legislation prior to World War II. In the Sugar Act of 1948, quotas for the domestic areas were limited to fixed quantities, with all the growth of our market going to foreign suppliers, 96 percent to Cuba. This was done to assist Cuba in making the transition from wartime to peacetime conditions, since Cuba's production has been greatly expanded to meet America's wartime needs. However, it was recognized at the time that the change was of temporary nature and that at the appropriate time the domestic areas should resume participation in market growth.

Cuba, under Public Law 545, retains its status as our largest foreign supplier. The actual tonnage which Cuba will market in the United States is expected to increase from year to year because of her participation in our market growth. Additional quotas granted to other foreign suppliers, as provided in this act, are in line with our national policy of broadening our trade relations.

It should be emphasized here that the sugar program, supported by a small excise on sugar, actually has shown a profit of about $312 million since it became effective in 1937, and American housewives, under this program, pay less for sugar than is the case in many other areas of the world.

SCHOOL MILK PROGRAM

Public Law 465, H.R. 8320: This act, first, extended the special school milk program 2 years to June 30, 1958, increased the amount authorized for it from $50 million annually to $60 million annually for the current fiscal year and to $75 million for each of the next 2 fiscal years, and made certain nonprofit institutions devoted to the care of underprivileged children eligible for the benefits of the program; second, extended the accelerated burcellosis program 2 years to June 30, 1958, and increased the amount authorized for it from $15 million annually to $17 million for the current fiscal year and to $20 million for each of the next 2 fiscal years; and third, extended the veterans and Armed Forces milk program 2 years to December 31, 1958.

CONSERVATION

Public Law 483, H. R. 7236: This act means that in establishing the national standards for the Agricultural Conservation Program, the Secretary of Agriculture will have the authority, if he chooses to exercise it, of applying water conservation measures as ACP practices in any State. This act struck out the words "in arid or semiarid sections" which previously had limited the area of operation of this program as it relates to water conservation measures.

Public Law 473, H. R. 1855, enacted into permanent legislation authority which has been contained in the most recent several appropriation acts for the Department of Agriculture and which has been exercised, pursuant to those acts, by the Forest Service. The act consists essentially of authority for the Secretary of Agriculture to advance Federal funds in the furtherance of cooperative research projects.

TOBACCO

Public Law 425, House Joint Resolution ____, adjusted the burley tobacco allotment for 1956 upward, to conform with acreage justified by accurate data on 1955 production which was not available when the original allotment for 1956 was determined. The effect of Public Law 425 was to make most farm allotments the same as they were in 1955.

Public Law 427, House Joint Resolution 521, readjusts the acreage allotment of Maryland tobacco to conform with acreage justified by data on production of the previous year not available when the original allotment for 1956 was determined. The effect of this act was to eliminate an acreage reduction of approximately 15 percent for 1956.

Public Law 426, House Joint Resolution 518, adjusts upward the acreage allotments of fire-cured and dark air-cured tobacco to conform with acreage justified by data on production of the previous year which was not available when the original allotments for 1956 were determined.

Public Law 609, H. R. 9475: This act changed the statutory deadline from December 1 to the following February 1, for the announcement by the Secretary of Agriculture of tobacco marketing quotas with respect to all kinds of tobacco except flue-cured. The law had required that the Secretary make the announcement of tobacco marketing quotas not later than December 1 of the year preceding the year for which such quotas are established. On December 1 most kinds of tobacco have not yet been marketed. Therefore, instead of the accurate measurement of the quantity of tobacco produced during the current year which the Secretary possesses as soon as the current crop has passed through the markets, he has on December 1 only the estimates made as of November 1. In a number of recent years these estimates have varied sufficiently from actual outturn of crops to have created a situation where the marketing quota announced by the Secretary was substantially different from the quota he would have determined had the actual weight of the crop been known to him. Under Public Law 609, the Secretary now may make the quota announcements at any time prior to February 1 and it is presumed that he will do so with respect to the various types of tobacco at such time as sufficient production and other data are available.

Prior to this enactment, this Congress had approved separate bills to adjust allotments to conform to data that was not available when the allotments were announced—a condition that may be avoided in the future by the use of the authority in Public Law 609.

OTHER ENACTMENTS

Public Law 431, S. 2884: This act made possible the planting in 1956 of an expanded acreage of durum wheat in counties known to be capable of producing this wheat, in order to alleviate the serious shortage of this particular type of wheat, which is preferred in the manufacture of macaroni.

Public Law 607, S. 2967, first, increased by 15,000 acres the lands within the roadless area of the Superior National Forest which may be acquired under the act of June 22, 1948; second, increased to $2,500,000 (from $500,000) the amount authorized to be appropriated for the acquisition of lands under such act; and third, made section 5 of such act applicable to the additional lands described by the bill of June 30. Section 5 provides for payment to the State of Minnesota of amounts based on the appraised value of national-forest lands in the roadless area rather than forest receipts, as provided by title 16, United States Code, section 500.

Public Law 471, House Joint Resolution 122, directed the Secretary of Agriculture to release to the Orangeburg School District reversionary interests in improvements on a 3-acre tract in Orangeburg County, S. C.

Public Law 472, H. R. 374, authorized the adjustment and clarification of ownership to certain lands within the Stanislaus National Forest, Tuolumne County, Calif.

APPROPRIATIONS FOR AGRICULTURE

Mr. Speaker, the 84th Congress, in its two sessions, has approved appropriations and loan authorizations aggregating $3,907,268,000 for the Department of Agriculture, exclusive of the actions restoring the capital of the Commodity Credit Corporation and not including funds which will be carried in the first and second supplemental 1957 appropriations yet to be enacted in the present session. Th previous Congress authorized $2,778,400,000 for the Department.

Liberal appropriations and authorizations were approved for conservation, education, research, school lunch, and all the various action programs.

A compilation of the House Committee on Appropriations figures shows specific appropriations and authorizations of the 84th Congress and the comparative figures for the previous Congress as follows: Research, 84th, $179,044,000; 83d, $129,600,000. REA electric and telephone facilities, 84th, $549 million; 83d, $420 million. Farmers Home Administration loan authorizations, 84th, $367,500,000; 83d, $330 million. Extension Service, 84th, $101,175,000; 83d, $78,800,000. Soil Conservation Service and watershed and flood prevention, 84th, $182,268,000; 83d, $145,011,000.

School lunch, 84th, $183,235,000; 83d, $166,601,000.

Mr. Speaker, other bills vital to agriculture will become law, as the work of this Congress. Thirteen bills, handled by our committee and approved by the Congress, now are at the White House awaiting action of the President.

These bills include:

H. R. 10285, to increase farmer ownership and control of the Farm Credit System and to promote the efficiency and growth of the credit system. This important bill also will merge production credit corporations in Federal intermediate credit banks.

H. R. 11375, to further extend the special school-milk program to certain institutions for the care and training of children.

H. R. 8321, to extend for 2 years the agricultural conservation program (ACP).

H. R. 11873, to amend the Watershed Protection and Flood Prevention Act so as to eliminate delay in the start of projects. This would reduce from 45 to 15 the number of days plans are held for review in Congress.

H. R. 9333, to amend the Commodity Exchange Act to provide for hedging anticipated requirements of processors and manufacturers.

S. 1915, to provide for the exchange of employees of the United States Department of Agriculture and employees of State political subdivisions or educational institutions.

S. 3032 grants the consent and approval of Congress to the Middle Atlantic Interstate Forest Fire Protection Compact.

A number of other bills approved by our committee are now awaiting final action by the Congress. They include:

IMPROVED CREDIT

H. R. 11544 which further improves and simplifies the credit facilities available to farmers. It provides additional funds for emergency loan programs, authorizes loans specifically for the refinancing of existing farm debts, provides assistance to part-time farmers, permits extension of loans when natural disasters result in crop losses, and provides other measures complementing the special programs for low-income farmers and the Great Plains program.

PUBLIC LAW 480

H. R. 11708 amends the Agricultural Trade Development and Assistance Act of 1954—Public Law 480. This is the law which authorizes the sale of agricultural surpluses for foreign currencies, where such sales are in addition to the usual purchases of such commodity by the foreign country. H. R. 11708 increases from $1.5 billion to $3 billion the total amount of the foreign currency transactions which may be carried out under the law.

GREAT PLAINS

H. R. 11833—the Great Plains Conservation bill—proposes a broad program, in cooperation with farmers, to restore and conserve cultivated and grazing lands of a wide area in the 10 Great Plains States that often are ravaged by high winds and dry weather. A $150 million program, over a 10-year period, is provided in this legislation.

SOIL-BANK PAYMENTS

H. R. 11958 proposes full soil-bank payments on allotted acreages not planted or not harvested because of adverse weather or other natural causes. Under this measure, if a farmer does not plant his full allotment or plants and does not harvest it, because of weather or other adverse conditions, he would be given the opportunity to place such land in the soil bank and be paid the regular acreage-reserve rate, provided he does not use the acreage for other production purposes.

MARKETING FACILITIES

H. R. 4054 seeks to reduce the cost of food to consumers and to improve the income of farmers through more efficient marketing of perishable agricultural commodities. The bill authorizes the Secretary of Agriculture to insure loans by private lending institutions for the improvement and development of wholesale marketing facilities, designed to lessen the uneconomic practices in antiquated facilities that now cause greatly increased costs, undue losses, excessive waste, spoilage, and deterioration in the handling of these perishable foods.

PERISHABLE COMMODITIES

H. R. 5337 would—without broadening the scope or original intent of the Perishable Agricultural Commodities Act of 1930, as amended—correct certain deficiencies which have become apparent in the administration of the act, thereby lending greater strength and more effectiveness to the basic legislation.

WATERSHEDS

H. R. 8750 amends the Watershed Protection and Flood Prevention Act, so as to provide a program that will be consistent with other Federal programs for the conservation, control, and utilization of water. The bill broadens the general scope of the act and makes a number of specific amendments.

Among other bills awaiting final action are:

H. R. 10108 which amends the penalty provisions of the tobacco marketing quota law to provide that penalties for exceeding the farm quota shall be assessed on the basis of the harvested acreage of tobacco rather than on the basis of the quantity of tobacco sent to market. The bill also amends the measurement provisions of the 1938 act to clear up any doubt which might arise as to the authority of the Secretary of Agriculture to measure tobacco acreage for compliance purposes.

H. R. 8384 which would include cranberries in the Agricultural Marketing Act of 1947.

Mr. Speaker, the recession in agriculture is reflected particularly in the volume of inquiries coming to Members of Congress and the House Committee on Agriculture concerning farm legislation.

These inquiries, from farm people and from people interested in farm problems, deserve thoughtful response, sometimes in considerable detail. I have inserted the foregoing preliminary and incomplete material to assist in furnishing the facts about agricultural legislation. Those who may be interested in reviewing all the farm legislation passed during the 84th Congress, to this date, should refer to the CONGRESSIONAL RECORD of August 25, 1955, where, beginning on page A4642, I presented a summary of enactments relating to agriculture during the first session of this Congress.

Section 22: Its Origin, Evolution, and Intent

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William J. Burns, managing director, Munitions Carriers Conference, Inc., contained in the May–June 1956 issue of National Defense Transportation Journal:

SETCION 28: ITS ORIGIN, EVOLUTION, AND INTENT

(By William J. Burns, managing director, Munitions Carriers Conference, Inc.)

Although section 22 was part of the orignay Act To Regulate Commerce of 1887, it has only been within recent years that controversies have raged over the equity or inequity of its provisions for the movement of Government property at free or reduced rates. What is this mysterious section around which so much discussion has taken place Why was it included in the Act To Regulate Commerce and what was its intent?

BACKGROUND OF GOVERNMENT RATE CONCESSION

In our early transportation history we can see where the seed was sown for the growth of section 22, for in the act of June 1, 1796, regulating grants of land appropriated for military service, Congress indicated an early intent to receive some concessions by requiring:

"That all navigable streams or rivers within the territory to be disposed of, by virtue of the act, shall be deemed to be and remain public highways."

The roots of the rate concession Congress expected the Government should receive in exchange for grants of aid, could be seen as early as 1824 when, in an act authorizing the State of Illinois to open a canal thorugh public lands, it was stated:

"That the said canal, when completed shall be, and foreover remain, a public highway, for the use of the Government of the United States, free from any toll or charge whatever, for any property of the United States or persons in their service, on public business, passing through the same."

Then, 10 years later, in an act which provided aid for the repair of a military road, military shipments were exempted from the payment of tolls by the following:

"*Provided*, That no toll shall be received or collected for the passage of any wagon or carriage, laden with property of the United States, or any cannon or military stores belonging to the United States, or to any of the States composing the Union."

Moving on a few years we find that during the period 1850–71 the Federal and State Governments granted 176,220,656 acres of land to the railroads to aid in railroad construction. And it is interesting to note that the majority of these land-grant acts, as they

became known, provided some type of rate concession to the Government in exchange for the grants of land. The acts varied, however, as to the magnitude of these rate concessions. Some of the acts provided that:

"The said railroad and branches shall be and remain a public highway, for the use of the Government of the United States, free from toll or other charge upon the transportation of any property or troops of the United States."

These railroads were referred to as free-toll lines. Others were called congressional-rate lines since the provisions in their acts required:

"That said railroad shall be a post route and military road, subject to the use of the United States for postal, military, naval, and all other governmental service and also subject to such regulations as Congress may impose restricting the charge for such governmental transporation."

Up to the Civil War, little controversy existed with regard to these provisions, since military shipments were small in number and volume. When it became a great sacrifice, however, for the railroads to transport the great Civil War traffic in troops and supplies, many requests were made for interpretations of the land-grant rate concession provisions. An early interpretation, in August 1861, confined the concession to the United States to a free use of the mere roadway, but did allow a deduction of one-third of the usual price of transportation. In the same year the Secretary of War, Simon Cameron, wrote to Mr. W. H. Osborne, president of the Illinois Central Railroad, stating that:

"Payment for transportation of freights, stores, munitions of war, and other public property will be made at such reasonable rates as may be allowed to other railroad companies, subject, however, to the abatement of 33⅓ percent."

In 1862 the House passed a provision requiring free transportation, but the Senate rejected it and induced the House to accept. And again, in 1865, a movement was started in the House to force the Illinois Central to transport property for the Government free of charge, but no action was taken.

Since the free-transportation provisions of the early land-grant acts were subject to varying interpretations, the later acts, beginning in 1866, began to specify in more definite terms the intent of the free transportation. In the act of July 13, 1866, for example, new phraseology was included:

"And the same shall be transported over said road at the cost, charge, and expense of the corporation or company owning or operating the same, when required by the United States to do so."

Or consider the following language in the act of July 26, 1866:

"That said company, after the construction of the road, shall keep it in repair and in use, and shall at all times transport troops, munitions of war, supplies, and public stores upon its road, for the Government of the United States, free from all cost or charge therefor to the Government."

A crisis finally arose in 1874 when, in the Army Appropriation Act of that year, Congress provided that no payments should be made for the transportation of troops or property over free-toll railroads, or any other land-grant railroads, where the land-grant act contained any condition whatsoever relating to the transportation of Federal troops and property. This act, however, permitted the railroads to institute suit against the Government, which they did, in order that the free-toll provisions of the act might be interpreted by the courts. And, in 1877, in *Lake Superior & M. R. Co.* v. *United States*, the court handed down the following opinion:

"We are of the opinion that the reservation in question secures to the Government only a free use of the railroads concerned, and that it does not entitle the Government to have troops or property transported by the companies over their respective roads free of charge for transporting the same."

During this period of land-grant aid there were many railroads which received no assistance, and found themselves unable to compete with the reduced-rate lines for Government traffic. These railroads, therefore, began entering into equalization agreements with the Government whereby they agreed to meet the rates of the reduced-rate lines, other than those which could make no charges.

CLAMOR FOR RATE REGULATIONS BEGINS

To turn now for a moment to the regulation of rates, we find that relatively little was said in Congress about this subject until 1868, when evidence began to appear of a definite movement to regulate rates. In that year three different resolutions were introduced which looked toward the control of rates. The object of rate regulation in this early period, L. W. Haney reported in his Congressional History of the Railways, was predominantly cheap transportation. Three bills introduced in 1870, in fact, were entitled "To promote commerce and cheapen the transportation of mails." And in 1872 the Senate appointed a special committee to investigate the possibility of securing cheaper transportation between the interior and seaboard.

A few years later, in 1877, Congressman Regan, of Texas, introduced a bill to regulate commerce, and Congressman Watson, of Pennsylvania, introduced one in 1878, both of which were referred to the House Committee on Commerce. Congressman Reagan, however, happened to be chairman of this committee, and his substitute bill, H. R. 3547, was reported out and passed the House in December 1878. This bill of Reagan's incorporated much of the rate concession philosophy inherent in the early Federal aid to the States, and later in the land-grant acts, and by the following language laid the foundation for the inclusion of section 22 in the act to regulate commerce:

"That nothing in this act shall apply to the carriage, receiving, storage, handling, or forwarding of property less than the ordinary carload, or wholly within one State or Territory, going to or coming from some foreign country, or to property carried for the United States at lower rates of freight and charges than for the general public, or to the transportation of articles free or at reduced rates of freight for charitable purposes, or to or from public fairs and expositions for exhibition."

Reagan's bill was referred to the Committee on Commerce in the Senate but no further action was taken. He introduced his bill again in 1879 and 1880, but made no progress.

The beginning of the final stage in the evolution of section 22 arrived in December 1884 when the House passed Reagan's bill H. R. 5461. As contrasted with Reagan's 1877 bill, which provided for the movement of Government property at lower rates than charged the general public, the 1884 bill contained the following complete exemption:

"That nothing in this act shall apply, to property carried for the United States."

While the House was passing Reagan's bill, the Senate had been considering a similar bill of Senator Cullom of Illinois, and when the Reagan bill came up from the House the Cullom bill was passed by the Senate as a substitute for it on January 30, 1885. At this juncture a select committee of five Senators was appointed, with Senator Cullom as chairman, to investigate and report upon the regulations of railways and water carriers, the findings of which resulted in the famous Cullom report. Based to a large extent on the findings of his committee, Senator Cullom reported Senate bill 1532 from the Committee on Interstate and Foreign Commerce on February 16, 1886, and it was passed by the Senate. Upon receipt in the House, however, the Reagan bill was passed as a substitute. And when the Senate disagreed with the Reagan substitute, conferees were appointed to resolve the differences. While these differences were basically concerned with the long-and-short-haul provision, an antipooling clause, and enforcement procedures, it should be noted that differences in wording existed with relation to the transportation of Government freight as reduced rates. Since the Land Grants Acts had placed reduced rates to the Government on a fait accompli basis, the differences in the two bills revolved around wording which would make the reduced rates to the Government lawful in an act which was otherwise designed to prevent the very thing reduced rates to the Government imply, discrimination.

The Reagan bill provided that nothing shall apply to property carried for the United States at lower rates of freight and charges than for the general public, while the Cullom bill stated that nothing shall apply to the carriage, storage, or handling of property free or at reduced rates for the United States, State, or municipal governments.

Early in 1887 the committee of conference reported a bill which was passed by the Senate on January 14, and by the House on January 21, 1887. This bill, which was a compromise insofar as the free transportation provisions of the Reagan and Cullom bills were concerned, was signed by President Cleveland on February 4, 1887, and became the Act to Regulate Commerce. Thus section 22 was born.

EARLY EXPERIENCE UNDER SECTION 22

From the enactment of the act of 1887 up to and including World War II, predominantly all of the Government traffic was moved by the railroads under land-grant and rate equalization concessions. Section 22 was the medium that made these rate concessions lawful.

During this period there were attempts made to clarify to some extent the general haziness which surrounded this anomalous section.

In its first year of operation the Commission, for example, held in a case involving the issuance of mileage tickets:

"That while the issuance of mileage tickets is authorized by section 22 of the act, that section does not relieve the carriers from the requirements of reasonableness and impartiality as to rates charged for such tickets."

And in its First Annual Report, the Commission stated with regard to section 22:

"These provisions, it will be seen, are not intended to qualify to any injurious extent the general rules of fairness and equality which the act has been so careful to prescribe and the exceptions may all be said to be authorized on public considerations."

In 1892, in a Section 22 proceeding before the Commission concerning unjust discrimination in the movement of passengers, the Commission said that:

"Indeed, many, if not all, the excepted classes named in section 22 are those which, in the absence of this section, would not necessarily be held the subjects of unjust discrimination. Such, for instance, are property of the United States * * * in favor of whom a reduction of rates had been made for many years before the passage of the act."

We can see in this early Commission opinion the rationalization of rate concessions to the Government.

In 1913, however, the Commission took a somewhat different position with regard to unjust discrimination, stating in *Dairymen's Supply* v. *Pennsylvania Railroad* that while portions of section 22 allow the carrier to transport property at free or reduced rates to fairs, it does not require that the carriers

do so, adding that it was permissive of the carriers to furnish reduced rate transportation provided that it does not result in unjust discrimination under section 2 or undue preference or prejudice under section 3 of the act.

Ten years later, in *Nashville, C. & St. L. Ry. et al.* v. *State of Tennessee et al.*, the court took a more definite position stating:

"Congress did not intend, by this provision (sec. 22) concerning reduced rates and free transportation, to create an instrument, by which the carrier was authorized, in its discretion, to subject interstate commerce to undue prejudice."

REPEAL OF LAND-GRANT RATES URGED

With the outbreak of war in Europe in the late thirties, our military shipments began to increase sharply and strong requests were made to repeal the land-grant rate concessions to the Government. The Transportation Act of 1940 finally relieved the railroads from their obligation to transport mail and Government traffic, but did not release them from their obligation to continue to transport military property and personnel at reduced rates. This awkward situation prompted the Interstate Commerce Commission to state in its annual report for 1941:

"The confusion incident to present land-grant legislation is impeding desirable changes in rates and is bringing about transportation in some instances that appears to be highly uneconomic."

The Association of American Railroads, in a booklet entitled "End Government Discrimination Against and Among Shippers—Repeal the Land-Grant Rates," quoted Joseph B. Eastman's 1942 statement before the House Interstate and Foreign Commerce Committee:

"It seems to me that the Government ought to pay the same rates for carriage of traffic as are paid by its own citizens, who really make up the country."

Then, in 1943, the House Committee on Interstate and Foreign Commerce, in a report accompanying H. R. 6156, stated:

"The enactment of this legislation will increase the freight bill of the Federal Government, but take little, if any, more from the people of this country. The shippers and consuming public must pay the Nation's freight bill. Where the Government transports its freight for less than the cost to the carriers somebody must pay proportionally more than costs. The only alternative is unjust rates to carriers."

Congress finally relieved the land-grant railroads from any further obligation to transport persons and property for the military at reduced rates, with these rates ceasing on October 1, 1946.

GOVERNMENT VERSUS COMMERCIAL SHIPPERS

Today the Government is the largest single shipper in the country. The Department of Defense alone has a transportation bill running around $1 billion annually.

Clearly the Congress in 1887 never envisaged a situation where the movement of Government traffic could have a disrupting effect on our national transportation system, or where discrimination could be practiced between commercial and Government shippers. In 1887, when section 22 was included in the act to regulate commerce, there were only 27,791 men in the Army, while today we have over a million in the Army and an additional 2 million in the other services.

With the land-grant rate concessions out of the way, section 22 remains the only medium through which the Government can secure lower rates than are available to commercial shippers. Since it follows, then, that the same arguments can be used to justify the revision of this section that were used in the land-grant hearings, it should be no surprise that the people in favor of repealing section 22 are substantially the same as those who favored land-grant repeal—the commercial shippers, receivers, and carriers being discriminated against by lower rates to the Government. The Government, on the other hand, which benefits most by the section 22 rate concessions, argues against the revision of this section.

CONCLUSION

Rate concessions to the Government had their origin in the early grants of aid to the States, and later were continued in the land-grant acts and rail-equalization agreements. Since the act to regulate commerce of 1887 had as its prevailing principle equality for all persons and communities under substantially similar circumstances and conditions, it was necessary to include in the act a section which would make lawful the rate concessions which had been in existence for many years prior to 1887, and which would continue subsequent to 1887 in the form of the land-grant acts and rail-equalization agreements.

With the repeal of the land-grant acts in 1946, however, much of the early Government rate concession philosophy was vitiated. There would appear to be no reason, therefore, why the Government today should be offered lower rates than are available to commercial shippers.

Democratic Processes Threatened by Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. ROGERS of Texas. Mr. Speaker, under the so-called civil rights bill there is a very real threat to the rights of the individual regardless of his color, his creed, or his race. In proposing to set up another commission and another bureau to direct the conduct of the people, we ought to be careful that, under the guise of protecting the rights of a minority, we do not create the machinery which will destroy the rights of everybody. This threat to our individual liberty is analyzed clearly in the following editorial from the Amarillo Globe-Times of Amarillo, Tex.:

APPLY THE BRAKES

If we had no other reason for gagging over the civil rights commission that the administration is proposing, it would be that what this Nation needs is a Congress that would repeal one law each day and disband one Federal commission or agency each month.

We are becoming so over-governed that there's no time for making a living and little time for recreation. If you can spare an hour from the daily grind, it has to be used filling out some form. The daily grind consists mainly in checking up to see if you are breaking a law before making a decision or taking an action.

But our acute discomfort about so-called civil rights legislation is that we are scared plumb to death of its consequences. If a man can appeal directly to the Federal courts for any minor problem that he dreams up, and the wide, large phrases of the proposed legislation leave such problems as purely cerebral dreamings, not bounded by the exactitudes of law, not only will our entire system of local government disappear, but individual rights will be lost in a mad scramble.

Boy, what we can do our neighbors under that civil rights law! But our joys is overbalanced by full recognition of what our neighbors can do to us!

Let us stop scourging ourselves by whips. Let us stop doing this phony public confessional that this country is full of oppressed, downtrodden people. As Representative WALTER ROGERS said in Washington last week "look at the propaganda that is being spread on the foreign front to the effect that there are no oppressed people in the United States and compare it with the domestic propaganda that is being generated (for vote-getting purpose) in support of this bill." Let us get the record straight.

We've got all the civil rights we need. We've had a Constitution for nearly 200 years that assures us of them. We've given every minority its day in court. Generally each minority gets along with the majority, which is made up of all the other minorities, about as well as human nature allows. All the laws in the world won't change human nature, so let's stop passing laws and get back to doing what we've been doing for 200 years, educating human nature to live up to basic law in the Constitution.

In the next few months when all of that civil rights legislation is being pushed forward to your approval, remember well a concise sentence of ROGERS which sums it well:

A civil rights commission would have powers that "no good man would want and no bad man should have."

Gardotherapy

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the text of a release which was issued this week by the Veterans' Administration, dealing with the efforts of a Bridgeport, Conn., man to rehabilitate mental patients in veterans' hospitals.

For this work, Edward B. Moddell, chief gardener at the veterans' hospital in Northport, Long Island, has received the Veterans' Administration's highest award—the exceptional service award.

Following is the text of the VA news release:

A kindly, white-haired gardener who has devoted much of his life helping mental patients regain their interest in living by working among flowers, has received the Veterans' Administration's highest honor—the exceptional service award.

This recognition of Edward B. Moddell, chief gardener at the VA hospital in Northport, Long Island, resulted from his years of voluntary assistance to the medical staff in developing gardening and flower cultivation into an important rehabilitation tool for mental patients.

Dr. Jesse F. Casey, VA's director of psychiatry and neurology, presented the award to Mr. Moddell "for his exceptional contribution to the rehabilitation of patients at the Northport Hospital."

"Over a period of 5 years," according to the citation, "he has developed and operated a program of gardening for mentally ill patients that has been a significant factor in restoring many patients to happy, normal lives."

Gardotherapy, the name given to this rehabilitation program, has been so successful, VA said, that it is being adopted in several State and Federal institutions.

Gardotherapy reinstills in mental patients their interest in living which so often they have lost, VA said.

Mr. Moddell's unique program also has prepared many patients for a vocation when they finally are discharged from the hospital.

The program got underway shortly after World War II. Mr. Moddell worked officially for VA by day, and, in cooperation with the medical staff, as a volunteer at night.

Patiently he taught disinterested, emotionally disturbed veterans to grow vegetables and flowers and gradually the Patients Garden Club came into being.

Back in 1947 the club held the first of its annual flower shows at the hospital. Since then club members have entered outside competition and three times have won silver cups at the International Dahlia Show and on two occasions have won prizes at the International Flower Show held annually in New York City.

Dr. Arnold A. Schillinger, manager of the Northport VA hospital, explained that the flower show's activity serves a dual purpose.

"The staff never could have demonstrated the high value of gardotherapy in helping emotionally and mentally disturbed men without the unselfish assistance of Mr. Moddell. In the last 9 years, I am sure he has given as much of his time as a volunteer as he has served with the VA for pay."

Dr. Schillinger added that the rehabilitation study has received the active support of the Oyster Bay and Westchester Herb Societies which have furnished additional volunteers. As a result, gardotherapy now has been extended to other VA hospitals.

But that isn't the whole picture for behind the award is another story—that of a World War I veteran who overcame his own disability to make horticulture his profession.

Mr. Moddell served as a machinist's mate aboard a naval transport. He took advantage of the Government's vocational rehabilitation program for disabled veterans after World War I and studied horticulture at Connecticut University.

A native of Bridgeport, Conn., Mr. Moddell has been with VA and the Northport hospital since 1938.

Special Prayers for Public Servants

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mrs. PFOST. Mr. Speaker, at a recent meeting of the Presbyterian Synod of Idaho, special prayers were offered for public servants—particularly those in the Congress and the executive branch of the Federal Government.

In apprizing me of this action, the Reverend Robert C. Shupe of Caldwell, the stated clerk of the synod and a resident of my home county wrote:

We want you to know we appreciate the arduous duties of the office you hold, and the struggles of conscience you must often have as you vote. We trust that you may always be led by the Spirit of God, and that you will be voting for the generations to come, as well as what seems to be politically best for the present moment.

Because of the beauty and inspiration of one of the prayers he sent me, under unanimous consent, I insert it in the CONGRESSIONAL RECORD:

We pray for all who sit in high places of authority in the Government of our Nation, in the House, the Senate, the Cabinet, and the Presidency. Make them humble before Thee, fearless before men, dedicated to the way of Jesus Christ. Give to all of these Thy wisdom, prosper their counsels and their efforts. Give them that favor and following from the people, which good and able men deserve; and unite all citizens and publice servants in gratitude to Thee and in the service of Jesus Christ, our Master and Saviour. Amen.

Textiles Suffering From Foreign Imports

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. PHILBIN. Mr. Speaker, the fallacious arguments of proponents of free trade have been directed toward developments in the textile industry.

It is stated, for example, that new synthetic fabrics have been responsible for the present conditions. There is no factual basis for this claim.

Production of all Broadwoven cotton goods increased 3 percent during 1955 over 1954 while imports from Japan increased 108 percent. Although production of synthetic textile fabrics has been increasing during the past few years, this section of the industry has suffered reverses during the past several months and has not been placing cotton goods at a competitive disadvantage.

During the first quarter of 1956, production of synthetic textile fabrics declined 4 percent from the preceding quarter and 3 percent from the first quarter of 1955. As far as cotton fabrics are concerned, first quarter 1956 production was 4 percent over the preceding quarter and 5 percent over first quarter 1955. In contrast, imports of cotton fabrics from Japan during the first quarter of 1956 were at an annual rate of 243,756,000 square yards, an increase of 410 percent over 1955.

The price structure of the industry is such that the prices of cotton and synthetic textile fabrics are interrelated. The importation of low-cost Japanese cotton textiles affects not only the price of the same fabrics made in the United States but they affect the price of all competitive fabrics—including synthetic textiles. The Japanese fabrics, low-priced because of cheap labor and cheap cotton, depress the price of American fabrics and also create tremendous market uncertainty.

It is also stated that "an exceedingly small part of domestic consumption of cotton manufacturers is supplied by imports—and Japan accounts for only a part of such imports." This is another misstatement of fact.

To measure total United States production of cotton fabrics against imports is a distorted and unfair measure because of the nature of the industry. The cotton textile industry has several major components, such as manufacturers of fine goods, print cloth, duck, sheeting and others. Even within these broad categories there are important subdivisions.

The key to our present problem is the quantity of fabrics of specific types which are being imported from Japan. For example, cotton velveteens—imports from Japan during 1955 totaled 5,754,000—or 71 percent of total United States production. Imports of cotton velveteens from all countries amounted to 92 percent of total United States production during 1955.

The gingham imports situation further proves the inaccuracies of the free traders.

During 1955—imports from Japan equaled 12.7 percent of United States production of ginghams and other box loom goods.

The annual rate of imports of Japanese gingham is now at 121 million square yards or equal to 46 percent of 1955 domestic production—an increase of 266 percent in the quantity of Japanese ginghams being imported over 1955 and an increase of 262 percent in the ratio of imports from Japan to United States production of ginghams and other box loom goods.

Just as important, if not more so, than the actual imports now coming into the United States from Japan is the increasing rate of these imports. During 1954 imports from Japan were 56 percent greater than during 1953, but by 1956 the annual rate has increased 695 percent over 1953—an increase of 1,141 percent in the rate of increase.

There are other examples of the fantastic rate by which Japan is increasing her share of the American market for cotton textiles:

First. Velveteens: Imports during 1954 declined 77 percent from 1953 but during 1955 imports from Japan were 1,977 percent over 1953 and 9,890 percent over 1954.

Second. Cotton sheets and pillowcases: During 1955 increased 787 percent over 1954 and the annual rate during 1956 is 792 percent over 1954.

Third. Ginghams: During 1955 exports from Japan to United States increased 663 percent over 1954 and the annual rate of imports from Japan during 1956 is 1,977 percent higher than during 1954.

Fourth. Cotton wearing apparel—bulk are blouses and shirts: Imports during 1955 were 2,497 percent over average annual imports during 1954 and the pace has become accelerated in 1956 with the current annual rate of imports at $44 million—or 6,605 percent over the annual average during 1954.

As to Japan's share of total United States imports of cotton cloth, during 1953, 48 percent was from Japan; 1954, 65 percent was from Japan; 1955, 75 percent was from Japan.

The textile profit picture, as we know it, also disproves certain inaccurate assertions.

So far as we know there are no sales and profit data available for the cotton textile industry as such. In all probability the minority report in referring to "Sales, profits, and profit margins for the industry were substantially higher in 1955 than in 1954" refers to the textile mill products industry. It is quite correct that profits after taxes for the textile mill products industry increased considerably during 1955. According to the SEC, profits increased from $114 million to $346 million, a percentage increase of 204 percent. These figures are, however, completely meaningless in any discussion concerning the cotton textile industry. They are data for the textile mill products industry which includes the cotton textile industry, the synthetic textile industry, the woolen and worsted industry, the knitting industry, the hosiery industry, the knit underwear industry, the dyeing and finishing industry, the felt hat industry, carpets, rugs, and other floor coverings. There is no way of allocating any proportion of the profits for the textile mill products industry to any of the component industries.

The Northern Textile Association has surveyed sales and profits for 12 southern companies and 4 New England companies manufacturing the same kinds of fabrics which are being imported from Japan. These companies make both cotton and synthetic textiles but concentration is on cotton fabrics. Total sales for these companies during 1955 amounted to $1,594,892,000; net profit, after taxes, for these companies amounted to $48,490,000, a ratio of 3 percent—profits to sales. This represents some improvement over the ratio of 2 percent during 1954 but is less than the ratio of net profits to sales during 1953, which amounted to 3.2 percent.

The 1955 profit ratio of 3 percent is considerably less than the ratio of net profits to sales for all manufacturing corporations in the United States, which during 1955 amounted to 5.4 percent. Many individual industries during 1955 had profit ratios far in excess of those reported for the 16 representative cotton textile mills. For example, profit ratio in primary iron and steel industry was 7.2 percent, 5.1 percent in the machinery industry, 6.1 percent in the paper and allied products industry, 8.2 percent in the chemical industry, and 11.1 percent in the petroleum industry. As compared with the profit ratio for all industries and with the specific industries mentioned above, the profit ratio of the cotton and textile mills is below average despite claims to the contrary made by proponents of free trade.

Congress must act soon to check devitalizing imports if we are to retain the vitality of our great free-enterprise system. More industries every day are affected by cheap, substandard imports from foreign nations. If this trend continues, irreparable damage will ensue to the American economy. The question of tariffs and cut-throat imports is a major national issue. As greater impact on American industry and employment occurs, this question will present an increasing challenge. It must be met now.

Manifesto No. 2 Has a Better Point

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following outstanding, cogent, and common sense editorial that appeared in the Louisville Courier Journal on Sunday, July 15, 1956, on the question of so-called civil rights.

MANIFESTO NO. 2 HAS A BETTER POINT

Four months ago practically to the day after their flaming manifesto on school segregation, Members of Congress from the Old South once again invoke this old southern custom. They put their case in writing. This time the manifesto No. 2, current series, sets forth opposition to the pending so-called civil-rights legislation.

We say it is an old custom because there are striking parallels between the latest manifestos and Southern declarations of a century and more ago. The most famous of previous statements of southern attitude probably were Calhoun's resolutions of 1833. Both these and the South Carolina declaration of 1860, accompanying that State's ordinance of secession, contain passages almost identical with some of those in today's statement.

South Carolinians, for example, deplored that Northern States "have assumed the right of deciding upon the propriety of our domestic institutions." The same complaint was voiced in the manifesto last March, the only practical difference being that the word was "segregation" then, where in 1860 it was "slavery" (* * * "they have denounced as sinful the institution of slavery").

It must be said, however, that the most recent manifesto declaring opposition to the civil-rights bill has a sounder basis than the other. It undertakes to dissect the bill which comes up for debate in the House in a few days. This bill, bearing the blessing of President Eisenhower, would create a bipartisan commission on civil rights and set up a division of civil rights in the Department of Justice.

The southerners call the bill "vague," and they are right. They suggest that it is a pious gesture, and it is. They are mindful of the bill's timing in a political year, which is obviously the truth of the matter. To be sure, they themselves have political axes to grind, being subject to election by voters who hold generally to the views which they express—or echo. But the fact is that there has been a civil-rights unit in the Department of Justice for 17 years, or since Robert H. Jackson was Attorney General.

Another fact is that Federal courts have mandates to enforce civil-rights guarantees, imposed by United States statutes and a long series of Supreme Court decisions. A presidential commission on civil rights would almost certainly head toward one of two destinies. It would become another extrajudicial bureau or it would be an empty fount of platitudes and good (or not so good) intentions. President Truman's 1946 Committee on Civil Rights was an excellent example of righteousness petering out into futility.

One good question might well be: What's the manifesto for in the first place, and why a second one so closely on the heels of the thunderous statement last March? The answer is that a manifesto, which is a declaration in concert, is a right handy device. In the House of Representatives debate is limited. Few Members have a chance to arise and get their views on record to show their constituents that their hearts are in the right place. Attached to a manifesto, a signature speaks for itself.

A fellow can state a view, he can take a stand with full credit. At the same time a manifesto presented in well-chosen words that incline to oratorical fulsomeness is the best of ways to let off steam. It breathes defiance of a political majority that is going to pass the bill in any case. It averts the necessity of whipping up a third party as a medium for expression of principles and passions.

For this purpose it's as good as a filibuster any day, though not nearly so effective. It is for Senators to talk a bill to death by grace of their unique rules. The House Member must be satisfied with getting himself on the imperishable record. The main thing for the manifesto writers to watch is that they don't run it into the ground.

The President's Health

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. KEARNEY. Mr. Speaker, nerves are always jumpy in a campaign year and the affliction seems more contagious than ever this year. The current tempest over the President's health is a case in point. There was a front-page headline in one of the Washington newspapers the other day that read "Democrats Agree To Go All Out on the Health Issue."

The news story justifying this headline went on to say that the Democratic high command was not going to let anyone in America forget President Eisenhower's heart attack and recent operation. In other words, the President is being put on guard that if he runs again he will be subjected to a bitter, all-out attack. The implication is that he had better get out of the race.

The obvious strategy behind all this is that the Democratic high command has no other issue to use against the President, so it has been decided to keep hammering at his health, even though the best doctors in the country have assured us that the President is in no danger.

Mr. Speaker, I respectfully submit that to malign a man's health for political purposes—to use this sort of a scare attack to undermine public confidence in our leader and agitate the nervous system of the body politic—is as wrong as it is to malign a man's character.

My Democratic friends are quick to protest against anything they think will reflect unfairly upon themselves in this campaign year. Among other things, they are riled about a forthcoming

Hollywood movie called "The Boss," which is said to be patterned after the old Prendergast political machine. This movie has been described as an attack on former President Truman, but it is my understanding, and I have been so advised, that the film does no dishonor to the former President. If it did, I would protest its release.

Mr. Speaker, I am for a clean campaign on both sides.

A Civilian Atomic Power Acceleration Program

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the follow thoughts on the subject of S. 4146, which would provide for a civilian atomic power acceleration program.

Mr. Speaker, I am disturbed at the thought of the proposal to build atomic powerplants as specified in S. 4146. I have opposed the unnecessary subsidization of electric powerplants on the grounds that it would be unfair to our coal people and to our private electric companies. As you know, coal is responsible for the employment of many thousands of persons in my congressional district. We are also proud of the Appalachian Power Co., whose 5 generating plants consume well over 3 million tons of coal per year and which has always provided southern West Virginia with excellent service. I have been especially pleased with the cooperation which the Appalachian Electric Power Co. has always offered when the cause of the coal industry was at stake.. I recall that only recently, when the West Cirginia State Society arranged for the first Coal Festival to be held in Washington, two of Appalachian's executives come here to participate in the program. The company's attractive display—which explained factually and simply how electricity is geenrated through the use of coal—was placed in a prominent part of the Sheraton-Park Hotel Lobby and thus was seen by scores of persons who otherwise would have no knowledge of coal's role in the production of electricity.

What excuse is there for the Federal Government to invest $400 million in the creation of atomic power plants that would be competitive with our electric power industry? When the need for greater supply of electricity becomes evident, our electric companies immediately undertake to provide the needed capacity. There is no shortage of electricity at our atomic energy installations. If these reactors were to be built as stipulated, the electric utilities industries would be threatened with a loss of market for which they have invested millions of dollars. At the same time the coal industry would be confronted with serious losses. In my opinion the coal industry and its working force have already been subjected to enough injury and indignities through unwise policies on the part of the Federal Government.

Aside from the interest of these industries in the proposed program, there is another factor which should definitely cause Congress to hesitate before proceeding with legislation. I am sure that every American mother, in particular, will protest any furtherance of the reactor proposal under present conditions in the light of the report that has been made available to us by the National Academy of Sciences.

As the National Academy explains it:

Man has been dealing with an enormous new force whose potential effects he has only dimly understood.

The amount of radiation absorbed by the human body in a lifetime is usually infinitesimal; it is the cumulative effect that is to be feared. We presumably can safely take more radiation than we are now receiving, but the scientists cannot say precisely how much more. They do explain, however, that when a worldwide power industry is fully developed, the accumulated waste would send out more deadly rays than bombs in an atomic war. Mr. Speaker, I would think that this one item in the Academy's report is enough to defeat S. 4146.

The Voluntary Relocation Program for the American Indian

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HALEY. Mr. Speaker, many Members of the Congress, I am sure, have had requests from their constituents relative to the voluntary relocation program for the American Indian which is being carried on by the United States Bureau of Indian Affairs.

Many misleading articles concerning this program have appeared in magazines and other publications. In an effort to be of assistance to the people who have the interests of the American Indian at heart and in order to dispel some of the misinformation that has been written about this program, I asked the Commissioner of Indian Affairs, the Honorable Glenn F. Emmons, to prepare a report on this program so that I could make it available to my colleagues of the House.

Commissioner Emmons, who in my opinion is doing an outstanding job in all phases of Indian affairs, has submitted the report to me.

I have asked permission to include this report in the Appendix of the CONGRESSIONAL RECORD today so that each of the Members of the House would have the opportunity to know the facts about the voluntary relocation program for the American Indian. The report follows:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
BUREAU OF INDIAN AFFAIRS,
Washington, D. C., July 12, 1956.

Hon. JAMES A. HALEY,
Chairman, Subcommittee on Indian Affairs, Committee on Interior and Insular Affairs, House of Representatives, Washington, D. C.

MY DEAR MR. HALEY: Some time ago you requested this Bureau to supply you with a brief statement giving the history, the reasons for, and the workings of our Relocation Program. I appreciate this opportunity to supply you with such information and am enclosing such a statement which I hope will be helpful to you.

In my opinion this is a program which is extremely important to the future of many Indians. There has been a great deal of misinformation on this program and I am delighted to have this opportunity to provide you with a full statement of the facts.

If your subcommittee could find time to examine this program in detail I think it would be very helpful.

Sincerely yours,

GLENN F. EMMONS,
Commissioner.

A BRIEF HISTORY OF THE BUREAU OF INDIAN AFFAIRS PROGRAM OF RELOCATION SERVICES FOR AMERICAN INDIANS

Relocation: One of several dynamic approaches to the overall needs of the Indian people.

For many years the Indian people have lived a life of isolation on reservations. The free movement of Indians away from the reservations has been hampered by economic, social and political factors involved in their status as Indians. This isolation and segregation from the mainstream of American life has been experienced by no other racial or nationality group in the United States. As wave after wave of newcomers to the United States took their places in American society, the Indians remained isolated in places where they had little or no opportunity to share in the benefits of this society.

1. NEED FOR OFF-RESERVATION OPPORTUNITIES LONG RECOGNIZED

From the very earliest days of the history of this country, small numbers of Indians have been moving out to areas of broader opportunity. Over the years congressional investigations, surveys by private organizations concerned with the welfare of the Indian, and officials of the Bureau have pointed out the need for opening up ways in which Indians could move out and take their places in the larger community forming around them. While the Bureau through its school system has pursued with vigor efforts to find opportunities away from the reservations for graduates of Bureau training schools, no broad effort was ever undertaken on behalf of the adult population as a whole until the inauguration of the Bureau's program of voluntary relocation services in 1952.

During the 1930's in following out one of the recommendations made in the Meriam Survey, the Bureau undertook a program of obtaining employment for Indians. While this might have developed into a broader service under more favorable circumstances, it failed to do so and the Indians benefiting from this program were for the most part young people who were graduating from the Bureau's training schools. But this activity did set in motion an outward migration of younger people, many of whom today, 20 years later, are well established in Chicago, Detroit, Los Angeles, and the Pacific Northwest.

Three major factors worked against the growth of this early program: (a) the depression of the 1930's, which greatly reduced available job opportunities; (b) the Federal

work relief projects which were undertaken on the reservations as part of the national work-relief program and which provided a subsistence income at home; (c) the change of Federal policy in Indian affairs which during this period was directed to revival of local tribal self-government and enlargement and development of reservation economies. The off-reservation employment program, which was serving for the most part younger Indians with some training, was believed to be running counter to the broader objective of building up reservation communities which would be needing the leadership available in younger age groups. This program was abandoned in 1940, unfortunately, just before the great expansion in the Nation's industrial economy, which was required by the United States' participation in World War II.

2. OFF-RESERVATION MIGRATION DURING WORLD WAR II

Although the Bureau provided no assistance to Indians seeking to make their contribution to the war effort and to share in the benefits of such employment, there was a great wave of outward migration of Indians into the war industries. With a similarly large number of Indian young people, women as well as men, entering various branches of the armed services, there was a noticeable reduction in the population of many of the reservations during the first 5 years of the 1940's.

3. WORSENING ECONOMIC SITUATION ON RESERVATIONS AFTER WORLD WAR II

With the end of World War II a movement back to the reservations commenced—first the service men and women, and then the men and women who were losing their jobs in the contracting war industries. During the 1930's, because of the Federal work programs and, during the first half of the 1940's, because of the demands of the war effort for manpower, the Bureau of Indian Affairs and the States with Indian reservation populations had been lulled into a sense of complacency about the worsening economic situation on the reservations. Basic subsistence needs of the reservation populations were being met during the 1930's with Federal work-relief projects. During the early 1940's reservation resources were less sorely tried due to the absence of people in the armed services and in war industry and many families on the reservations were being materially assisted by allotments from the service pay of members of the family away in military service. The serious economic needs on Indian reservations began to be recognized increasingly from 1945 on. Reservation resources were either static or in a process of depletion and reservation populations were increasing steadily.

4. INAUGURATION OF PLACEMENT SERVICES ON THE NAVAHO

The whole problem of growing population pressure on Indian reservations was dramatized for the American public by the plight of the Navaho in Arizona and New Mexico. While Bureau officials were in the process of assembling data to justify a long-range rehabilitation program on the Navaho, articles on the extremely serious situation of this tribe began to appear in national magazines, Sunday editions of metropolitan newspapers and on national radio programs. Public opinion was aroused and Congress took cognizance of the needs of the Navaho by authorizing a 10-year rehabilitation program for the Navaho in April 1950.

Comprehensive as this program was for the economic development of the reservation-range improvement, irrigation, development of timber and mineral resources and so on, it was estimated at the time that only 6,950 of the reservation's 7,500 families could be accommodated through the proposed extensive development of the reservation resources. Accordingly the program included a provision for the establishment of a service to assist those who would be interested in seeking a livelihood away from the reservation to do so.

In 1948 a program of job-placement services was established. Many Navaho were already engaged in seasonal farm work and railroad track work. Through close cooperation with the Arizona and New Mexico State Employment Services and the United States Railroad Retirement Board placements of Navaho in both types of employment increased steadily. Placement offices were opened in Denver, Salt Lake City and Los Angeles and a very modest number of Navaho men (for the most part without their families) began to move to these locations for seasonal work.

5. INAUGURATION OF RELOCATION PROGRAM

In the fall of 1950 the Bureau decided that it should launch a full-scale relocation program for those Indians who wished to seek permanent opportunities away from reservations. It requested an appropriation for this purpose for the fiscal year 1952 (beginning July 1, 1951) and in the midsummer of 1951 it appointed staff to work in the States mentioned and also in Oklahoma, Arizona, and New Mexico.

In November 1951, a Field Relocation Office was opened in Chicago; the placement staff on the Navaho was incorporated into the relocation program and the Navaho placement offices in Denver, Salt Lake City and Los Angeles were converted to Field Relocation Offices to serve not only Navaho but members of tribes in all of the States mentioned. Included in the appropriation for this fiscal year were funds to underwrite the costs of transportation, shipping household effects, subsistence en route to the relocation destination and subsistence during the first few weeks at the new location for relocatees.

In February, 1952, the first relocatees began to move and a steady flow of people seeking the opportunities available in off-reservation locations has continued and grown in numbers from year to year. A tabulation of relocations by fiscal year from the inception of the program to date follows:

6. RELOCATIONS FROM INCEPTION OF PROGRAM TO DATE

	Singles		Families		Total	
	Units	Persons	Units	Persons	Units	Persons
Fiscal year:						
1952	227	227	215	641	442	868
1953	377	377	320	1,093	697	1,470
1954	752	752	470	1,801	1,222	2,553
1955	804	804	696	2,655	1,500	3,459
1956 [1]	899	899	843	3,376	1,742	4,275
Total to date	3,059	3,059	2,544	9,566	5,603	12,625

[1] Through Apr. 30, 1956.

7. OPENING ADDITIONAL FIELD RELOCATION OFFICES

In July 1954, because of limited relocation opportunities in Salt Lake City, the Field Relocation Office there was closed and a new office was established in San Francisco to develop relocation opportunities in the San Francisco-Oakland Bay Area. In July 1956, additional offices will be established in St. Louis, Mo., and San Jose, Calif.

8. DEVELOPING AND IMPROVING RELOCATION SERVICE TECHNIQUES

The tabulation of relocations given above represents an impressive accomplishment on the part of the Indians involved and on the part of the Bureau staff who have assisted these people to find economic security and an opportunity for a richer, fuller life in off-reservation locations. This accomplishment is not to be measured simply by number of individuals and families assisted in relocation, however; it indicates the development and continuing improvement of effective techniques in preparing people for relocation, in interpreting their background to employers and the communities they are moving into, in developing employment opportunities and locating housing, in orientation to urban living and the industrial work situation and in followup community adjustment counseling. The job has been and continues to be a challenging one since so little existed in the way of precedents on how to provide these services. The greatest credit for the success realized to date, however, rests with the Indian relocatees themselves who in a very real sense are courageous pioneers, and with employers and the communities where the Indians are establishing new homes for the warm welcome they are affording the newcomers.

The question sometimes arises as to how well the Indian people who choose to relocate are able to adjust to the requirements and broader opportunities found in the urban situation. A recent study, covering relocations during the fiscal year 1955, reveals that 71 percent of the persons who relocated that year remained in their new environment, evidently having decided that their new life offered more promise than the reservation. These people moved from 14 different reservation areas to the four city locations. The percentage of successful relocations ranges from a high of 94 percent from one Indian agency jurisdiction to a low of 53 percent from another jurisdiction. Seventy-eight percent of the family units, 74 percent of the single women, and 68 percent of the single men were successful. This is not to say that those who returned to the reservation after their first relocation were not successful. It is well known that many of these try again and make a good adjustment.

The program is well received by employers, who generally express commendation of Indian workers. The Indian people also view the program favorably. This is evidenced by a sizable backlog of applications for this service on hand at the end of each fiscal year.

The relocation services are designed to help people help themselves. It deals with men and women who do not want to be dependent on the Federal Government, but who are eager to find their place in the free-enterprise system and to provide security for themselves and their children. As the program of relocation services progresses, the citizen of Indian ancestry is becoming a component part of the urban community scene. The time may come when those who prefer city life will have left the reservations in sufficient numbers to permit those who prefer to remain in the rural life to make a better living on the land from which the great pressure of population will have been alleviated.

Federal Support of Our Public Schools

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I would like to put into the RECORD, a letter I received from G. E. Watson, State superintendent of the de-

partment of public instruction, Madison, Wis., under date of July 3.

Although it appears that the school-construction bill is completely dead for this session, I believe Mr. Watson has stated the case for Federal support of our public schools so well that I would like to call his communication to the attention of my colleagues. Mr. Watson's letter follows:

STATE OF WISCONSIN,
DEPARTMENT OF PUBLIC INSTRUCTION,
Madison, July 3, 1956.

Hon. LESTER R. JOHNSON,
Member of House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. JOHNSON: I realize that this identical letter addressed to each of our Wisconsin Members of the House of Representatives may arrive too late for any consideration prior to a final vote in the House on the Kelley school construction bill. I appreciate also that there is a decided difference of opinion within our Wisconsin representation which will make some of these letters futile and some unnecessary. But further realizing that I have not communicated with the entire representation since January 30, 1956 and knowing that some questions have arisen, I felt it advisable to write to each of you.

First of all, I wish to reiterate my stand in favor of some Federal support of our public schools. There is much of national significance in the educational process of any one community for our American population is a mobile population. There is much of national significance in a strong system of public education as a bulwark of national defense. A literate, trained citizenry is a more capable citizenry. There is much of the production of our national wealth that is not localized, wealth that is created out of a variety of elements from a variety of places and sold and distributed all over America. Every phase of the whole discussion convinces me that Federal support of education is defensible and desirable.

Secondly, we are not discussing a new Federal activity. So-called Federal dollars have been flowing and are now flowing into every level of education. Two hundred fifty high schools in Wisconsin are now getting Federal aid in instruction through the federally subsidized agriculture and home economics programs. Our State colleges and universities are borrowing money on a loan basis and at a rate that spells out to me a degree of Federal aid in a much needed student housing program. Our own university is receiving millions of dollars annually in direct service support and in literally dozens of research programs and contracts. Not only do I believe that Federal support of our public schools is proper, but I reiterate my belief that the present Federal support program should be extended to elementary and secondary school construction in those districts in any or all States facing extreme difficulty in such construction requirements.

Third, I do not believe any antisegregation amendment has any place in the current consideration. The Supreme Court has rendered a decision in that matter and has provided, within that decision, for enforcement within the several States in accordance with the judgment of the Federal judiciary. To me, it would be extremely unfortunate if Congress were to improperly reenter the field of enforcement of the Supreme Court decision and by so doing inflame unnecessary animosities in the field of public education. The South has a tremendous problem.

The Supreme Court has charted a way of solution. I sincerely trust that Wisconsin will back the Supreme Court and will allow the South the needed time to work out its destiny. I urge you to vote against the Powell amendment or any similar amendment.

Fourth, there is much concern about the possibility that Federal aid received in Wisconsin might go to school districts that don't need it. To put it conversely, there is much concern that Federal aid should go only to those States and those districts that need it. May I suggest two facts? First of all, based upon local district statements as further analyzed by people in our office, there are many school districts in Wisconsin presently unable to provide adequate school facilities. Secondly, I can assure you that any plan submitted by the present State superintendent of Wisconsin to the United States Commissioner of Education will certainly place heavy stress upon the needs for buildings of properly formed school districts and the effort and ability of those districts. The only way the presently contemplated amounts of Federal participation could be at all significant in Wisconsin is to distribute them on a need basis. If we could look forward to the kind of money provided in the new highway program, we could visualize a flat grant program. But such would not be feasible in any education bill that has come to my attention.

Fifth and finally, I can see no "control of education" in this school construction bill. Surely, the bill provides that there shall be none. But, in addition, our present experience with the United States Office of Education and other agencies in our present program of Federal aid to school construction in federally impacted areas convinces us that the Federal Government and the local district can be brought into a proper cooperative posture through the State department of public instruction without any unwise use of Federal dollars or any unwise or improper control of local decisions.

Thank you for your indulgence in this too-long communication. I trust that in your final decisions you will be mindful of the needs within Wisconsin, needs that cannot be met within our present State laws. They must be met either by State and/or Federal support programs for needed modern, adequate, decent, safe school buildings. I wanted you to know I still believe Federal participation in that program is proper.

Respectfully,

G. E. WATSON,
State Superintendent.

Mental Health Legislation

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica Evening Outlook of June 5, 1956:

THE OUTLOOK
(By Louise Randall Pierson)

There's been a lot of yacking about mental health lately. And a whole flock of mental health bills have been tossed gaily into Federal and State hoppers.

In talking with people, I find they're pretty confused about the whole thing and my guess is that confusion worse confounded is just what the authors and boosters of these bills are hoping for.

If folks knew what the real score was they might blow their tops and insist the whole mess be dragged right out in the open.

But if any of these bills pass in their present form, you better think twice before you blow your top. This would show that you were emotionally immature and you could be whisked off to the boobyhatch in a plain envelope without previous notification.

Now, we are all aware of the sad fact that what with one thing and another, more people are going batty than ever before.

Our overcrowded hospitals are full of the mentally ill and short on doctors who are capable of helping these troubled patients to get well again.

So when the average citizen is urged to be for mental health, he naturally thinks he's being asked to support bills which would provide much-needed funds for better care for the mentally ill.

He couldn't be more wrong. These bills are not designed to get people out of hospitals and insane asylums but put more in.

How? Why the UNESCO "kids" who are behind these bills just redefined insanity. If you disagree with them, you have paranoid delusions, otherwise known as bats in your belfry.

Listen to Dr. Brock Chisholm, of the U. N. World Health Organization:

"We have swallowed all manner of poisonous certainties fed to us by our parents, our Sunday and day school teachers." He calls for "reinterpretation and eventually eradication of the concept of right and wrong."

Now take it easy. We better keep our traps buttoned. The bogyman will get us if we don't watch out.

Now, Mr. Carl Mote, Jr., of Hollywood doesn't like Senate bill 2937 or H. R. 6376, the Alaska mental-health bill (there are several identical bills with different numbers).

He believes—rightly or wrongly—that the bill is so carelessly drawn that it might conceivably lay a predicate of legislation which would someday enable politicians in power to send their outspoken critics off to an insane asylum under the guise that those critics are abnormal and therefore in need of mental care.

Mote wrote to quite a few of the politicians now in power, pointing out why he didn't like the bill and urging its defeat.

He received the following reply from Hon. ABRAHAM J. MULTER, United States Congressman from the 13th District, New York:

"DEAR MR. MOTE: Your post card of March 14, 1956, has been received.

"As soon as the mental-health bill is signed into law by our Republican President, after it has been passed by a Democratic Congress, I will make a special request that the first bed be reserved for you.

"Yours very truly,
"ABRAHAM J. MULTER."

Bye now. See you-all in Camarillo.

LOUISE RANDALL PIERSON.

Flood Control on Upper Wabash River

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the appendix of the CONGRESSIONAL RECORD reports on the flood control program for the supper Wabash River.

The three-reservoir plan for the upper Wabash River flood control is of special interest to 5 of the 10 counties in the Fifth Indiana District—Jay, Blackford, Grant, Huntington, and Wabash;

to 3 counties in the Fourth Indiana District—Wells, Allen, and Witley; and to Cass County in the Second Indiana District.

In accordance with a resolution adopted by the House of Representatives, May 23, 1946, 73d Congress, 1st session, relative to flood protection at or near Logansport, Ind., the Corps of Engineers, United States Army, made extensive studies and surveys of the Wabash River and its tributaries.

Their report has been filed but I include a copy of their interim and final recomemndations in order that this portion of the record may be complete.

I also include an article by Mr. Robert Kellum, executive secretary, Indiana Flood Control and Water Resources Commission which appeared in the July 15, 1956, issue of the Indiana Farmers Guide.

The various approvals prior to presentation to the Congress have been secured. These include approvals by the Governors of Indiana and Illinois; the Indiana Flood Control and Water Resources Commission; the United States Departments of Defense, Agriculture, Commerce and Interior and the Bureau of the Budget. The Indiana State Legislature gave its approval in the 1955 session with an appropriation authorization of $50,000, as that State's estimated share of a total of $425,000.

This flood control program has been referred to the Agricultural Conservation Service of the United States Department of Agriculture for its consideration of the flood control with a series of small dams on the watershed program. For numerous reasons, some of which are explained in Mr. Kellum's article, this proposal was not considered feasible by that agency.

The matters follow:

DEPARTMENT OF THE ARMY,
Washington, D. C., May 1, 1956.

Subject: Wabash River and Tributaries, at and above the mouth of White River, Indiana

To the SECRETARY OF THE ARMY:

1. I submit herewith for transmission to Congress the interim report of the Board of Engineers for Rivers and Harbors in partial response to resolution of the Committee on Public Works of the United States Senate, adopted May 9, 1949, requesting the Board to review the report published in House Document No. 100, 73d Congress, 1st session, and subsequent reports on Wabash River and tributaries, Ohio, Indiana, and Illinois, with a view to determining whether improvement of the Wabash River and tributaries at and above the mouth of White River, Indiana, in the interest of flood-control and allied purposes is advisable at this time; and in complete response to the following resolution of the Committee on Flood Control of the House of Representatives, adopted May 23, 1946, requesting the Board to review the recommendations contained in House Document No. 100, 73d Congress, 1st session, relative to flood protection at or near Logansport, Ind., with a view to providing protection in that locality by headwater reservoirs or other means. This report is primarily concerned with flood protection for the urban and rural areas along the reach of Wabash River extending from the downstream limits of Logansport, Ind., mile 352, to Huntington, Ind, mile 408.

2. After full consideration of the reports secured from the district and division engineers, the Board recommends the improvement of Wabash River and tributaries, Indiana, for flood control and allied purposes by the construction of Salamonie Dam and Reservoir at mile 3.5 on the Salamonie River, Mississinewa Dam and Reservoir at mile 7.1 on the Mississinewa River, and Huntington Dam and Reservoir at mile 411.4 on the Wabash River; generally in accordance with the plans of the district enginer and with such modifications thereof as in the discretion of the Chief of Engineers may be advisable; at an estimated cost to the United States of $42,010,000 for construction and $105,000 annually for maintenance and operation; provided local interests furnish assurances satisfactory to the Secretary of the Army that they will contribute in cash 1 percent of the first cost of the improvements, a contribution currently estimated at $425,000, and provided further that any one of the improvements may be undertaken independently of the others whenever funds for that purpose are available and the prescribed local cooperation for that reservoir has been provided. The Board further recommends that the presently authorized local protection projects for Logansport, Peru, and Wabash, Ind., at a currently estimated Federal first cost of $9,572,000 be abrogated upon authorization of the improvements recommended herein.

3. After due consideration of these reports, I concur in the views and recommendations of the Board.

S. D. STURGIS, Jr.,
Lieutenant General, United States Army, Chief of Engineers.

CORPS OF ENGINEERS,
UNITED STATES ARMY,
BOARD OF ENGINEERS
FOR RIVERS AND HARBORS,
Washington, D. C., November 29, 1955.

824.02 (Wabash River and Tributaries—The mouth of White River, Ind.).

Subject: Wabash River and Tributaries, at and above the mouth of White River, Ind.

To: The Chief of Engineers, Department of the Army:

1. This interim report is submitted in partial response to the following resolution adopted May 9, 1949:

"Resolved by the Committee on Public Works of the United States Senate, That the Board of Engineers for Rivers and Harbors, created under Section 3 of the River and Harbor Act, approved June 13, 1902, be, and is hereby, requested to review the report published in House Document No. 100, 73d Congress, 1st session, and subsequent reports on Wabash River and tributaries, Ohio, Indiana, and Illinois, with a view to determining whether improvement of the Wabash River and tributaries at and above the mouth of White River, Ind., in the interest of flood control and allied purposes is advisable at this time."

And in complete response to the following resolution adopted May 23, 1946:

"Resolved by the Committee on Flood Control, House of Representatives, That the Board of Engineers for Rivers and Harbors created under Section 3 of the River and Harbor Act approved June 13, 1902, be and is hereby requested to review the recommendations contained in House Document No. 100, 73d Congress, 1st session, relative to flood protection at or near Logansport, Ind., with a view to providing protection in that locality by headwater reservoirs or other means."

This report is primarily concerned with flood protection for the urban and rural areas along the reach of Wabash River extending from the downstream limits of Logansport, Ind., mile 352, to Huntington, Ind., mile 408.

2. Wabash River rises near Celina, Ohio, flows northwesterly 67 miles to Huntington, Ind., thence southwesterly 312 miles to the confluence with White River, its principal tributary, and continues southwesterly 96 miles to join the Ohio River 133 miles above its mouth. It drains a total area of 33,100 square miles, of which 16,440 square miles are above the mouth of White River, and 3,760 square miles are above the downstream limits of Logansport. The more important tributaries entering Wabash River above the downstream limits of Logansport and their respective drainage areas are: Eel River, 860 square miles; Mississinewa River, 810 square miles; Salamonie River, 557 square miles; and Little Wabash River, 290 square miles.

3. The Wabash River Basin above the mouth of White River consists of industrialized urban areas located principally along major streams and large areas of rich farmland interspersed with small rural communities. The larger cities on or near the main stem of Wabash River, and their populations in 1950, are Vincennes, 18,831; Terre Haute, 64,214; Lafayette, 35,568; Logansport, 21,031; Peru, 13,308; Wabash, 10,621; and Huntington, 15,079; all in Indiana. Industrial activities consist of the manufacture or processing of lumber and lumber products, foods, chemicals, ceramics, machinery, apparel, and munitions. Agriculture is also an important activity with corn as the principal crop. Natural resources include coal, clay, and limestone. Rail, highway, and air transportation facilities serve the region. Normal annual precipitation in the upper basin is 38 inches, uniformly distributed throughout the year. Authorized Federal flood-control projects within that part of the basin above the White River consist of 23 local protection projects and 1 reservoir. Four of the local protection projects, Delphi, Lyford, Gill Township, and Brevoort, are either completed or essentially completed; one at Vincennes is under construction; and funds for preconstruction planning of the Niblack project have recently been appropriated by Congress. Of the 17 local protection projects which have been authorized but not started, three—Logansport, Peru, and Wabash—are within the reach extending from Logansport to the headwaters. Levees for protection of both urban and rural areas have been constructed by non-Federal interests at various points within the basin.

4. The Wabash River Basin is subject to frequent and destructive floods. Although they may occur during any season of the year, the more severe floods usually occur during the winter and spring as a result of widespread storms. Conditions causing high runoff, such as snow-covered or frozen ground, prevalent during these seasons add to the severity of the floods. Fifteen major floods have occurred since 1875. The flood of March-April 1913 is the maximum of record, followed by those of May 1943, and January-March 1950. The flood plain investigated in connection with this report comprises an area along the main stem of Wabash River from the White River to mile 411.4 near Huntington, Ind.; Mississinewa River from its confluence with the Wabash to mile 7.1 at Peoria, Ind.; and Salamonie River to mile 3.1 near Dora, Ind. It is estimated that recurrence of the stages experienced during the 1913, 1943, and 1950 floods would cause damages, within the limits of the described area on a current price basis, of $29,658,000, $21,154,000, and $5,689,000, respectively. Average annual damages are estimated at $5,393,400 of which $4,544,600 is agricultural damage; $665,400, urban damage; and $183,400, damage to railroads and highways. In addition, loss of life is not uncommon. Six persons were drowned during the 1943 flood and 4 during the 1950 flood.

5. Local interests desire flood protection for urban and rural areas in the upper Wabash Basin. They suggest various solutions including channel rectification, local protection works, and retarding reservoirs. The

State of Indiana emphasizes the high priority for reservoirs above Logansport and has recently enacted legislation pledging $50,000 toward its share of required local cooperation.

6. The district engineer considers various solutions of the flood problem including local protection works alone, reservoirs alone, and a combination of local protection works and reservoirs. He finds that local protection at Logansport and Peru, either alone or in combination with reservoirs is not economically justified. At Wabash, only a limited local protection plan, which would exclude protection to some of the existing buildings, could be economically justified. Local protection at Wabash in combination with reservoirs is not economically justified. The district engineer concludes that the best plan is the construction of three upstream dams and reservoirs. Pertinent data concerning the proposed improvements are given in the following table:

Name	Dam site	Storage capacities (acre-feet)			First cost (summer of 1954 prices)	Annual charges	Annual maintenance and operation
		Flood control	Permanent pool	Total			
Mississinewa	Mile 7.1 on Mississinewa River	342,400	23,000	365,400	$17,000,000	$677,000	$35,000
Salamonie	Mile 3.5 on Salamonie River	226,700	12,000	238,700	12,610,000	485,000	35,000
Huntington	Mile 411.4 on main stem of Wabash River.	154,170	.....	154,170	11,835,000	468,000	35,000
Total		723,360	35,000	758,360	42,435,000	1,630,000	105,000

The district engineer estimates the total average annual benefits from provision of the three reservoirs at $2,210,700, of which $2,165,000 is due to prevention of flood damage and $45,700 is due to higher utilization of land. Substantial benefits accrue not only in the problem area but also downstream from Logansport to the White River. Some benefits accrue below the White River but they are minor in extent. In computing the benefits the district engineer takes into account all existing protection works but considers for the purpose of this interim report that the local protection works which have been authorized by the Government but not constructed, are ineffective. The resulting benefit-cost ratio for the three-reservoir system is 1.4. Analysis of each reservoir on an incremental basis shows that the benefits exceed the cost regardless of the order of construction. The district engineer considers that in accordance with current policy local interests should bear a percentage of the first cost of the improvement, equivalent to one-half the proportion that higher land utilization benefits bear to total benefits. He estimates this to be 1 percent. The district engineer recommends improvement in accordance with his described plan provided that prior to initiation of construction, local interests furnish assurances satisfactory to the Secretary of the Army that they will reimburse the Federal Government 1 percent of the total first cost, presently estimated at $425,000. He further recommends that the existing authority for the flood protection projects at Logansport, Peru, and Wabash, Ind., be withdrawn upon authorization of the three recommended reservoirs. The division engineer concurs.

7. Local interests were informed of the recommendations of the reporting officers and given an opportunity to present additional information to the Board. Careful consideration has been given to the communications received.

8. The proposed plan is acceptable to local interests and they have indicated their willingness and ability to cooperate in the improvements. The Department of Commerce has informed the Corps of Engineers that Federal-aid highway funds are not available to defray any part of the cost of altering Federal-aid highways for proposed flood-control projects where local interests are required to assume the cost of such adjustments as a part of the local cooperation. In this instance local interests are not required to make any adjustments of highways.

VIEWS AND RECOMMENDATIONS OF THE BOARD OF ENGINEERS FOR RIVERS AND HARBORS

9. The Board of Engineers for Rivers and Harbors concurs in general in the views of the reporting officers. A need exists for the control of floods in the Wabash Basin. The three reservoirs proposed for construction by the district engineer are suitable as the basic elements in a new and revised plan for the upper Wabash Basin. Substantial reductions in flood stages would result at Logansport, Peru, and Wabash. Flooding of extensive rural areas will also be alleviated. The authorized local protection projects at Logansport and Peru are not economically justified either with or without the reservoirs. The authorized local protection projects for Wabash is ecomonically justified without the reservoirs but not with the reservoirs. The Board therefore concurs with the reporting officers that the authorized local protection projects for Logansport, Peru, and Wabash be abrogated upon approval of the reservoir plan. In view of the interim nature of this report complete reanalyses have not been made as to the effect of the reservoirs on the economic justification of local protection projects which have been authorized but not started downstream from Logansport. The Board has been informed that this question will be given full consideration in the comprehensive report which will be submitted in final response to the authorizing resolution for the study of Wabash Basin above the mouth of White River. With this understanding the Board concurs in the recommendation of the reporting officers for construction of the three reservoirs at this time.

10. The Board accordingly recommends the improvement of Wabash River and tributaries, Indiana, for flood control and allied purposes by the construction of Salamonie Dam and Reservoir at mile 3.5 on the Salamonie River, Mississinewa Dam and Reservoir at mile 7.1 on the Mississinewa River, and Huntington Dam and Reservoir at mile 411.4 on the Wabash River; generally in accordance with the plans of the district engineer and with such modifications thereof as in the discretion of the Chief of Engineers may be advisable; at an estimated cost to the United States of $42,010,000 for construction and $105,000 annually for maintenance and operation; provided local interests furnish assurance satisfactory to the Secretary of the Army that they will contribute in cash 1 percent of the first cost of the improvements, a contribution currently estimated at $425,000, and provided further that any one of the improvements may be undertaken independently of the others whenever funds for that purpose are available and the prescribed local cooperation for that reservoir has been provided. The Board further recommends that the presently authorized local protection projects for Logansport, Peru, and Wabash, Ind., at a currently estimated Federal first cost of $9,572,000, be abrogated upon authorization of the improvements recommended herein.

CHARLES G. HOLLIE,
Major General, United States Army,
Chairman
(For the Board).

[From the Indiana Farmers Guide of July 15, 1956]

THREE-RESERVOIR PLAN FOR UPPER WABASH

(By Robert W. Kellum, executive secretary, Indiana Flood Control and Water Resources Commission)

The three-reservoir flood-control plan for the upper Wabash River Valley, of Indiana, is based on principles which have proven their worth during the last 25 years in many parts of the United States. The plan is to provide storage areas in tributaries, and on the main Wabash where feasible, that will hold back rain runoff from carefully computed up-valley regions. Then the extra amount of water is released through conduits in the base of each dam when the river has fallen.

Only by preparing painstaking engineering studies, to determine the amount of storage needed, can the projects be justified.

The upper Wabash three-reservoir project stands on its merits because it has undergone one of the most complete surveys of this kind ever made by the Corps of Engineers, United States Army. The Indiana Flood Control and Water Resources Commission engineers joined in assisting the Corps of Engineers to compile basic information in early parts of the study. The work included the determining of exact measurements for the valley areas involved.

The Corps of Engineers finally determined that the three reservoirs should be placed as follows to obtain the utmost in benefits for the valley:

1. A dam at Peoria on the Mississinewa River.

2. A dam at Dora on the Salamonie River.

3. A dam near State Road 5, south of Huntington, on the Wabash River.

The first two are designed to contain permanent pools, with flood-control storage to be on a temporary basis, when needed, above the permanent pool elevation.

The engineers find that annual average flood losses in the Wabash Valley amount to more than $7 million. They find that the 3 reservoirs would hold back floods as great as that of 1913, worst of record. Thus, all smaller floods would be eliminated, too. They report that the costs of these reservoirs, placed at a total of $42,400,000, would be justified in view of such benefits.

SIMILAR TO MIAMI RIVER PROJECT

The system of 3 reservoirs is similar to the 5-reservoir flood-control project in the Miami River Valley, north of Dayton, Ohio. These five have prevented any flood danger whatsoever from threatening Dayton. They form the main reason why Dayton is the important manufacturing and trading center that it is today.

Also, a reservoir of far greater size in California prevented serious damage to Sacramento during the most recent floods, although other cities in that State suffered severely.

Eight such reservoirs above Pittsburgh saved that city and others from losses that would have amounted to $140 million in floods of recent years because they reduced the crest of the Allegheny and Monongahela Rivers that join to form the Ohio at Pittsburgh. The Muskingum reservoirs, 14 of them, have performed similar valuable operations in eastern Ohio. Fifteen reservoirs of this type are now planned in New England.

It is recognized that certain relocations of residents in the immediate areas of the reservoirs are necessary. Every precaution is taken to assure full payment in such cases.

The question of relocation is a serious one. Many important phases of community life are involved. The choice finally comes on whether development of water resources and the safeguarding of much larger regions should be advanced as population increases, or whether continued threats to transportation, roads, farmlands, and key trading centers should be permitted.

FARMERS' INTEREST PARAMOUNT

Farmers have the most important interests, as a usual thing, in such projects. They are the ones who most often must face the problem of relocation so that storage areas for water may be obtained.

There is no easy answer. Various methods of payment are provided. In the case of the upper Wabash project, if it reaches construction stage, each property owner will have the right of appealing to the courts if not satisfied with terms offered after the appraisals are completed.

Some discussion has been heard of the prospect for many small dams to do the job of the three reservoirs. They could not do the job because there is no way of obtaining exact measurements of water stored in such small ponds. Also, area involved would take far more farmland out of cultivation if the same benefits are to be attained. Farm ponds lack the depth of reservoirs.

The effect of the three reservoirs can be computed exactly because the retention of the water is at strategic locations—something it would not be with many small dams.

The present plan for the upper Wabash has passed many tests already, and others are still ahead. One point is certain—if ever such a system of flood control has been subjected to complete engineering inspection, this one has.

THREE RESERVOIRS PROPOSED

Some details of the plan are:

1. Mississinewa Reservoir, to be situated in Miami, Wabash, and Grant Counties, Ind., would be formed by an earth dam located on Mississinewa River, 7.1 miles above its mouth. It would control a drainage area of 801 square miles.

Outlet works would include a broad-crested, ungated, saddle spillway through the divide between the Mississinewa and Wabash Valleys, and controlled sluices through the dam. The dam would rise about 137 feet above stream bed to top elevation 797 feet above mean sea level. The spillway crest would be at elevation 779 and, under maximum storage conditions, the flood-control pool would reach elevation 790. At the latter elevation the reservoir pool would have an area of 17,170 acres, and would extend upstream to above river mile 35.

A permanent pool would be provided with surface area of 1,300 acres at elevation 712. The estimated first cost of Mississinewa Reservoir is $17,990,000 at current prices.

2. Salamonie Reservoir, to be situated in Wabash and Huntington Counties, Ind., would be formed by an earth dam located on Salamonie River, 3.5 miles above its mouth. It would control a drainge area of 552 square miles.

Outlet works would include a broad-crested, ungated, saddle spillway through the divide between the Salamonie and Wabash Valleys, and controlled sluices through the dam. The dam would rise about 128 feet above stream bed to top elevation 812 feet above mean sea level. The spillway crest would be at elevation 791 and, under maximum storage conditions, the flood-control pool would reach elevation 806. At the latter elevation the reservoir pool would have an area of 19,230 acres, and would extend upstream to about river mile 30.

A permanent pool would be provided with surface area of 950 acres at elevation 730. The estimated first cost of Salamonie Reservoir is $12,610,000 at current prices.

3. Huntington Reservoir, to be situated in Huntington and Wells Counties, Ind., would be formed by a dam located on Wabash River above Huntington. The structure would consist of an earth embankment with gated concrete spillway section, and would control a drainage area of 708 square miles. Controlled sluices would be provided through the concrete section of the dam which would rise about 90 feet above stream bed to top elevation 805 feet above mean sea level.

Under maximum storage conditions, the flood-control pool would reach elevation 797, at which level it would have an area of 7,840 acres and would extend upstream about 23 miles to Bluffton. A permanent pool is not contemplated. The estimated first cost of Huntington Reservoir is $11,835,000 at current prices.

WOULD REDUCE FLOOD CRESTS

Functioning as a system, the proposed reservoirs would effect reductions of the following order in the crest stages of such great floods as those experienced in 1913, 1943, and 1950:

Reduction in flood-crest stages

[In feet]

Location along Wabash River	March 1913	May 1943	January 1950
Huntington	1.7	4.6	3.2
Wabash	6.3	4.0	4.0
Peru	8.1	7.4	9.0
Logansport	7.3	5.7	4.5
Lafayette	4.3	2.7	2.7
Terre Haute	1.0	.3	.3
Vincennes	.6	.3	.3

It is well to point out that recreational developments may be made by State or local units around the permanent pools, but that buildings must be kept back of an elevation marked by the top of the flood storage area. This usage has proved satisfactory in other similar projects if the supervision is kept on a high quality basis.

Also, in some instances, sales of raw water from such flood-control reservoirs are permitted to adjacent communities and this may be valuable in future years in Indiana—even if present underground supplies seem fairly adequate in most sections of the upper Wabash Basin.

For the long-range view, the reservoirs appear justified and the engineers have so recommended. Final decision on whether they will be constructed rests with Congress, which appropriates all funds used by the Corps of Engineers.

The Poznan Uprisings

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Honorable Henry Cabot Lodge, Jr.:

UNITED STATES
REPRESENTATIVE
TO THE UNITED NATIONS,
New York, N. Y., July 17, 1956.

Hon. EDITH NOURSE ROGERS,
House of Representatives.

DEAR MRS. ROGERS: Thank you for your letter of July 10. I am glad to have a copy of the resolution adopted by the Polish citizens of Lowell and can assure you of my deep interest in the recent Poznan uprisings.

The State Department is following developments in Poland and the satellite countries with great concern and is considering what further action can be taken either in or out of the United Nations to help the unfortunate people in these areas.

At the United Nations the countries which deny basic human rights to their people are constantly being challeneged. I have repeatedly called attention, in private talks with representatives of other nations, and in public debate, to the miserable conditions prevailing in countries under Soviet domination. In fact, last week in the Disarmament Commission I said to Mr. Gromyko that he is in no position to pass judgment on United States policy "as long as the people of the satellite states are held in an iron bondage, from which the heroic Poles in the last few weeks have been trying to escape, with the applause, I might say, of lovers of freedom all over the world."

You can count on my best efforts to bring the day nearer when freedom will be restored to all those who hate oppression and resist tyranny.

With best wishes,

Sincerely,

HENRY CABOT LODGE, JR.

Transcript of Vice President Nixon's Press Conference, Karachi, July 9, 1956

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. JACKSON. Mr. Speaker, I ask unanimous consent to place in the RECORD a transcript of Vice President RICHARD M. NIXON's press conference in Karachi, Pakistan, on July 9, 1956.

This transcript shows clearly the depth of understanding displayed by the Vice President, and his effectiveness in his recent tour in the Far East, in handling the problems in that area.

I call your special attention to Mr. NIXON's answer to the question of whether we should recognize the Government of Red China. He says, in part:

It certainly does not appear likely because the Communist government of China continues to persist in engaging in the type of activity which, as far as we are concerned, would make recognition morally wrong and, we believe, as far as the free world is concerned, disastrous.

This press conference transcript shows, far more clearly than I can describe, the concise opinions of our Government on many problems confronting the people of that area of the world.

The transcript is as follows:

TRANSCRIPT OF VICE PRESIDENT NIXON'S PRESS CONFERENCE, KARACHI, JULY 9, 1956

Question: "Can you tell us what you discussed with the President this morning?"

Answer: "Of course, as you know, the custom and proper practice is not to disclose what is said by the Chief of State in conversations we have. He, of course, has the option in that respect. We discussed economic problems—that was the major part of our discussion. We discussed the military ties which our two countries have. Also, it was very helpful for me to get from the

President and members of his staff their view of new developments that have taken place in the past few months with regard to the new line being following by the leaders in Moscow and Peking—particularly in Moscow, to a lesser extent, Peking—and to get their views as to the effect that line was having and would have in this part of the world. What I will do when I return to Washington is to report to President Eisenhower and to the National Security Council the substance of our conversations and the views that have been expressed. Beyond that, I don't think there was anything in the conversation I could disclose, but I will be glad to answer any general questions any person may ask me."

Question: "Do you find any change in the attitude of the Asian countries after Russia has started this economic offensive?"

Answer: "First of all, in answering that question, I must limit it to the countries I have visited. I have visited the Philippines, Vietnam, the Chinese Republic, Thailand, and, of course, Pakistan. Those visits have been relatively brief, and I emphasize that I am not one of those who thinks he can become an expert on problems simply by stopping and having a 2- or 3-hour chat with the heads of the government. On the other hand, you do get some impressions that are worthwhile passing on. In the countries I have visited I have not found that the leaders of those countries have changed their thinking as a result of these tactics. I would say that in all of these countries the attitude of the leaders is pretty much the same. And it is this—they are watching with interest and listening with interest to what the men of Moscow are saying, but they are still waiting for them to do something. In other words, they are waiting for them to act as they talk, and, until they act as they talk, the leaders of these countries believe it is important that the free world countries—countries that want to retain their independence—continue those policies that they have adopted in the past. That is a general summary of a very complicated question."

Question: "Sir, would you like to comment on the Peking Radio broadcast?"

Answer: "That is the one accusing the United States of exploiting the Philippines, and, apparenly, ties my visit into it. That, of course, is not a new charge. As a matter of fact, the United States is accused of exploiting every country in the world with which we have friendly relations, and every country which the United States may find that it is to the mutual interest of the two countries to assist, for example, in economic development. Speaking specifically of the Philippines, I would say the record shows that what the Peking radio claims is completely false, because the Philippines have had remarkable economic progress during the first 10 years of their independence. Their progress in the 3 years since I last visited there was very encouraging to me, and greater even than I had expected. I would simply sum it up by saying that the United States in its various assistance programs, as distinguished from the Communist government in their assistance programs, is not interested in creating economic satellites. However, what we are interested in doing is to help these countries where they themselves believe it is in their self-interest to gain the strength—economically, politically, and militarily—to maintain their independence of any foreign domination. Now, that, of course, sounds altruistic—but we believe it is also self-interest as far as we are concerned, because we believe the best guaranty of our independence and the liberties that we want to retain is to have nations around the world strong enough to be independent and to maintain their own freedoms."

Question: "Do you believe the countries that accept economic assistance from Communist countries run the danger of becoming satellites, and, secondly, is that the purpose of offers of economic aid by Communist countries?"

Answer: "My answer to both questions is yes. That, however, is not an opinion of mine. It is simply an analysis of what I believe is history. The history of the situation has always been this: That economic aid and military aid, when offered by Communist countries, always has as its purpose creating satellites—military, political, or economical, or all three. I think it was pretty well summed up by a friend on this trip last night in Bangkok. He said there had been some criticism that, insofar as United States aid was concerned, it took too long to get it expedited and that there were too many strings attached. I gave the same answer, of course, that I gave here to your question regarding the purpose of our aid. He also said the claim was made, as far as Soviet countries are concerned, that they offered their aid without any conditions or strings attached; but he added this—he said they have no strings, that is true—they offer aid with a rope. I believe that is the best way to answer it. Any country that will accept military aid or economic aid from a Communist country runs certain risks of having a rope tied around its neck."

Question: "Is the United States still opposed to the admission of Red China to the U. N.?"

Answer: "The answer, of course, is categorically yes. We base that position on the U. N. Charter. The U. N. Charter states specifically and clearly that new membership is open to all peace-loving nations who agree to abide by the principles of the U. N. And, at the present time, the Communist government of China is acting in open defiance to the U. N. in maintaining the division of Korea, for example, in maintaining internal subversions in all the independent countries in Asia, and in continuing to threaten and use force and violence in regard to its claims to Quemoy and Matsu and areas in that part of the world."

Question: "Do you think that the United States at any time might recognize the government of China?"

Answer: "The answer is that we in the United States believe that a question of that type should be answered when we have the situation presented, rather than on a hypothetical basis—a situation which would enable us to change our position. And, in the foreseeable future, it certainly does not appear likely because the Communist government of China continues to persist in engaging in the type of activity which, as far as we are concerned, would make recognition morally wrong and, we believe, as far as the free world is concerned, disastrous."

Question: "Since you were here last has the United States been able to make any contribution toward the solution of Kashmir issue?"

Answer: "I am personally aware of the great difficulty of that issue, as all of you are in this area. The position of the United States is well known. And that is—first, we think the issue should be settled just as quickly as possible and second, we believe that the way it should be settled is, if possible, through direct negotiations between the two countries. If that will not work out—then, through U. N. action. We do not feel the United States should properly intervene and attempt to dictate a settlement one way or the other. But certainly the moral support of the United States is on the side of the settlement of the issue because we feel it is a constant source of irritation between two great nations—India on the one side, and Pakistan on the other side."

Question: "Should the Pakistanis conclude that all the big nations like the United States and other powers express their views like this on the important issues like Kashmir, what will be the fate of the smaller nations in the world?"

Answer: "I am not sure I understand the question. If the United States takes this position on Kashmir, what will be the position of the smaller nations of the world?"

Question: "I make it clear a bit more. There is general impression in Pakistan that United States and other big powers, they are not prepared to annoy Nehru and, therefore, they are expressing their moral support to the issue. If that is correct position, I do not know whether it is correct officially or not, and if that is the correct position what will be the fate of the smaller nations?"

Answer: "I think I understand now. Let me make one thing clear. The United States in its relation to other countries constantly at least tries to take a position which recognizes the sovereignty, the equality, and the independence of all countries, regardless of their population, regardless of their military strength, and of their economic strength—and as far as this issue is concerned, that is our position. The only thing, however, that we do also say is that we do not think it would be appropriate for the United States unilaterally to intervene in this issue until the traditional methods for settling the issue have been exhausted: (1) Direct negotiation, and then (2) through the U. N. That we think is the only proper position to take."

Question: "When you say you think that countries which receive" * * * (tape missing.) (This question was covered correctly by A. M. Rosenthal in his New York Times article, July 10, 1956, datelined Karachi, July 9.)

Answer:[1] "Economic aid is one that will make a country stronger economically. Even though that country might have received some aid from a Communist country, we think, in the long run, that where a country is strong enough economically, it then becomes strong enough to maintain its independence of foreign domination and runs less risk of becoming a Communist satellite."

Question: "Said he thought your views were not democratic on neutrality."

Answer: "Mr. Nehru?"

Questioner: "Yes."

Answer: "I, of course, for reasons that are apparent, would be very hesitant to comment on what somebody said Mr. Nehru's views were. Obviously, in this world we believe—and our friends of Pakistan believe this as well as we in the United States—there will be disagreement among friends as to what is the proper course for a nation to chart in its international relations. Mr. Nehru, of course, is entitled to his opinion. But I think that if Mr. Nehru would read my speech carefully and, not with any false pride of authorship I trust, that if others would read it carefully, they would find that my speech is the

---

[1] [Excerpt taken from the New York Times of July 10, 1956, by A. M. Rosenthal.]

KARACHI, PAKISTAN, July 9.—Vice President RICHARD M. NIXON warned the countries of the free world today against accepting any form of economic or military assistance from the Soviet Union.

The price of aid from the Communists would be a "rope around the neck," Mr. NIXON said. He said the Soviet Union's purpose in its current offers of economic aid was to make the recipient countries satellites—economic, political, or military satellites or all three.

But the Vice President turned down the idea that the United States should automatically refuse to help countries taking assistance from the Communists.

He said the purpose of United States aid was to help countries maintain freedom. And he declared that United States assistance might help countries taking aid from the Communists to keep their independence.

very antithesis of undemocratic procedures. Because what I constantly emphasize in that speech is this theme—the theme that all through Asia people want a better way of life; that all through Asia people want to retain their newly won independence; and that in my opinion there were dangers to that independence—dangers that I indicated—particularly the danger of Communist domination, and I cited case by case where it happened in other areas of the world in which previously independent countries had come under Communist domination. In view of that fact, I then reached the conclusion that communism was out of step with the real desires of the Asian peoples—to have independence and freedom—because international communism of the Peking and Soviet variety is completely inconsistent with independence. It is completely inconsistent with freedom and my answer to Mr. Nehru would be that anyone who suggests that Communist assistance, for example, is not inconsistent with independence and freedom is not reading correctly the lessons of history."

Question: "Do you feel that in the case of the Kashmir issue the U. N. should act as vigorously as in the case of Korea?"

Answer: "Unfortunately, I think we have chosen the example there that isn't perhaps the best because Korea is still unsettled as well. I will go back to my original theme that the settlement of the Kashmir issue at as early a date as possible is in the best interests of international peace and harmony, and that in both the case of Korea and Kashmir, the U. N., interested as it is in maintaining the peace, should act vigorously, provided the two countries are unable to work out the disagreement between themselves."

Question: "The recent bilateral talks between the two countries have reached an impasse; therefore, shouldn't the United States intervene?"

Answer: "My answer again is that we believe, assuming that should happen—and understand, I am not commenting on whether it has reached an impasse yet because I have not studied this as much as you have—but, assuming that has heppened, we still say that the other step must also be exhausted; and that is the U. N. step, because we must get away from unilateral action in the world if we can and we must use wherever we can the world organization that is set up specifically to deal with that problem where all of the weight of world public opinion can be brought to bear toward its solution."

H. R. 12298, a Bill To Improve Provisions of the Federal Excise Tax System

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. FORAND. Mr. Speaker, I am introducing today a bill, H. R. 12298, which is the result of the work of the subcommittee on excise tax technical and administrative problems which began in October of 1955. This bill incorporates the more than eighty-odd recommendations made by the subcommittee for the improvement of administrative and technical provisions of our Federal excise tax system. The bill reflects the policy changes made in the subcommittee recommendations by the Committee on Ways and Means during the course of the committee's consideration of the subcommittee's report. I will discuss these changes below.

The status of this bill is somewhat different than the ordinary introduced bill. It has been considered by the full committee and in general, I believe the bill meets with the approval of the ful committee. I have not asked the committee to report out the bill, however, because there is no prospect of its final enactment this year.

Nevertheless, I believe that an important function will be served by the introduction of this bill at this time. It is my hope that all taxpayers and taxpayer groups who are affected by the operation and effects of the Federal excise tax system will devote their full attention to the bill from the point of view of determining its technical adequacy and substantive sufficiency in carrying out the recommendations of the subcommittee and the Committee on Ways and Means. It is also my hope that interested groups and persons will immediately begin to prepare overall studies of the excise tax field as it affects them. This is important because the Subcommittee on Excise Tax Technical and Adminitsrative Problems has been reconstituted by the Committee on Ways and Means and given a much broader jurisdiction which will enable us to consider not only technical and administrative problems but the underlying substantive policy of our Federal excise tax laws and the level of excise tax rates as well.

While the subcommittee will have to meet to determine specific plans, it is my expectation that interested parties will be given an opportunity to be heard by the subcommittee, not only on the provisions of the bill but also on questions of Federal excise tax policy, the level of rates, and other technical and administrative problems in the excise tax field not covered by the bill.

I want to take this opportunity to express my sincere appreciation to the members of the subcommittee for their diligent work and cooperation in the preparation of the subcommittee's recommendations.

I also would like to publicly thank the staffs of the Treasury Department, the Internal Revenue Service, the Joint Committee on Internal Revenue Taxation, and the Committee on Ways and Means who have helped make this bill possible. Were it not for the full cooperation of these people and the all-important contribution of the House Legislative Counsel's office, it would not have been possible to draft the bill for public inspection and comment in the relatively short period of time which has been available since the report of the subcommittee was first considered by the Committee on Ways and Means.

As soon as our legislative schedule permits, I plan to call a meeting of the subcommittee to formulate the plans of the subcommittee for the balance of this session of Congress.

The Honorable JERE COOPER, Democrat, of Tennessee, chairman of the Committee on Ways and Means, will announce the membership of the subcommittee as soon as the members are named. I expect this announcement in the next day or two.

The name of our subcommittee has been redesignated as the "Subcommittee on Excise Taxes."

There follows a description of the changes made by the Committee on Ways and Means in the recommendations of the subcommittee. These changes are incorporated in the bill.

The principal action taken by the Committee on Ways and Means which differs from the subcommittee's recommendation are:

First. Section 111 amends the tax on automotive parts and accessories to exclude from tax those which are sold for ultimate use or used as repair or replacement parts or as accessories for farm equipment.

Second. The bill does not increase the tax on tubeless tires by 1 cent a pound over the rate imposed on tires requiring inner tubes.

Third. Section 115 relating to the tax on radio and television sets, phonographs and records does not impose a tax on transistors. In other respects, however, it does follow the subcommittee recommendation; that is, it imposes a tax with respect to record players and tape and wire recorders.

Fourth. The bill does not delete curling stones, deck tennis equipment, lacrosse equipment, and sleds from the tax on sporting goods.

Fifth. Section 132 (b) of the bill amends section 4243 to exclude from the application of the club dues tax assessments paid for the construction or reconstruction of any social, athletic, or sporting facility.

Sixth. Section 132 (b) also adds a new exemption from the club-dues tax for due or fees paid to nonprofit organizations primarily for the purpose of providing swimming facilities for its members. In order to qualify children must be permitted to use the swimming facilities, no alcoholic beverages may be served or be permitted to be consumed on the premises, no dining facilities—other than for light refreshments—and no dancing facilities may be provided and the organization must not be controlled by or under common control with any other organization.

Seventh. The subcommittee had proposed that amounts paid to a club for replacement of facilities destroyed by a casualty under certain conditions should not be subject to the club-dues tax. This has been omitted as no longer necessary since capital improvements will not be subject to tax under the introduced bill.

Eighth. The subcommittee recommended that it be made clear that in the case of transportation of oil by pipeline, the tax does not apply to movements which constitute an integral part of the operation of a refinery, a bulk plant, a terminal, or a gasoline plant. The bill, in section 136, in more specific terms than the subcommittee report, carries out the intent of this recommendation but provides that in no case are movements located on two or more premises to be free of tax if the distance covered is more than 25 miles.

Ninth. Section 141 of the bill in the new code section 4302, provides as recommended by the subcommittee for an exclusion from the documentary transfer tax in the case of amounts transferred to capital account from earned surplus. It also provides an exclusion for other amounts transferred to capital account to the extent such amounts were taken into account in determining value in an earlier transaction.

Section numbers refer to section of the bill.

Tenth. Section 152 of the bill carries out the full committee's action with respect to pinball machines.

Eleventh. No attempt has been made in this bill to carry out specifically the subcommittee's recommendations with respect to the timing of floor stock refunds although in general terms the subcommittee's recommendations were followed in the floor stock refunds provided by the Highway Revenue Act of 1956, H. R. 10660.

Twelfth. Section 164 of the bill provides for refunds with respect to gasoline lost in a disaster as declared by the President. The subcommittee had in addition recommended that refunds be made available in the case of gasoline lost in a fire. This part of the subcommittee recommendation has been omitted from the introduced bill.

Thirteenth. The bill does not include the subcommittee recommendation for a semimonthly rate system beginning August 1, 1956, or for a monthly rate system beginning August 1, 1958, for the collection of alcohol and tobacco taxes.

Fourteenth. In section 201 of the bill—sections 5006 (a) (2) and 5173 (c) (1) (A) of the code—the 8-year bonding period for distilled spirits is extended to 20 years.

Fifteenth. Section 207 of the bill authorizes refunds for beer lost by reason of the flood of 1951 and the hurricane of 1954. Only the first of these changes was recommended by the subcommittee.

Sixteenth. Section 201 of the bill—section 5415 of the code—permits transfers of beer between breweries owned by the same brewer and allows such transfers where the controlling interest in the shipping and receiving brewery is owned by the same person or where shipments are between breweries owned by parent and subsidiary corporation. The subcommittee had recommended against allowing these transfers.

Seventeenth. Section 201 of the bill—section 5561 of the code—limits the authority of the Secretary or his delegate regarding waiver of the provisions of the distilled spirits laws to meet the requirements of the national defense to 3 years. The subcommittee would have extended this waiver provisions indefinitely.

Eighteenth. Section 201 of the bill also makes certain amendments relating to wine. These include: (a) a revision of the definition of the winemaker's own product to cover multiple plant operations and affiliated persons located within the same State—section 3592 (f) of the code; (b) a clarification of permitted activities on bonded wine cellar premises—sections 5361 and 5364 of the code; (c) provision for a slight increase in the amount of dry sugar which may be used in fermenting wines from low sugar fruits such as apples and a clarification of the manner in which such sugar may be added—section 5384 (b) (2) of the code.

The Crisis of Klamath

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mrs. GREEN of Oregon. Mr. Speaker, the Honorable Charles Sprague, editor and publisher of the Oregon Statesman of Salem, Oreg., and former Republican Governor of Oregon, is one of our most respected and wisest elder statesmen. Like the overwhelming majority of Oregonians, he is concerned about the problems now confronting the Klamath Indian Tribe in the proposed termination of Federal control under Public Law 587. I place in the RECORD, his analysis of the need for revision of the present law:

[From the Oregon Statesman of July 12, 1956]

IT SEEMS TO ME

(By Charles A. Sprague)

In 1953 Congress passed a bill, now Public Law 587, setting up machinery for termination of the Klamath Indian Reservation. The Klamaths are among the richest of the Indian tribes, their large reservation containing one of the biggest stands of pine timber in the country. Some members have been desirous of dissolving the tribe and distributing its assets to members, but there has been sharp division of opinion within the tribe, however, over procedures. Public Law 587 set up a program for distribution by requiring the Secretary of the Interior, after the appraisal of tribal property is made to "give each adult member of the tribe * * * an opportunity to elect * * * to withdraw from the tribe and have his interests in tribal property converted into money and paid to him." The management specialists appointed were Tom Waters of Klamath Falls, J. E. Flavel of Lakeview, and W. L. Phillips, Sr., of Salem. Phillips resigned several months ago to head the campaign of Douglas McKay for the Senate.

As the specialists got into the Klamath problem they became aware that to carry out the law as it was written would be a catastrophe. For the Indians to get their individual shares all at once would probably result in the early impoverishment of those who made that choice, because the majority are not accustomed to handling large sums of money on their own. Also to offer for sale the big blocks of timberland required to raise the necessary funds would mean a dumping of this valuable asset. Only a few companies would be big enough to bid on it. There might follow an orgy of cutting that would impair the economy of the Klamath Basin. Tom Waters, as spokesman for the management team has made this clear to congressional committees.

Mrs. EDITH GREEN, Member from the Third District of Oregon, has introduced 2 bills, one to transfer the cost of administering the act from the tribal treasury to the United States Treasury, the other to provide for postponement of the action by the management team. Her bill, H. R. 11660, would have the managers transmit the property appraisal to the Secretary of the Interior for his consideration and transmit also a written report of their action and offer their recommendations as to future procedure. These reports would then be forwarded to Congress with such recommendations as the Secretary of the Interior may desire to make. No further action could be taken by the management team prior to 9 months following submission of this report.

Mrs. GREEN's bill is primarily a delaying action. It does not amend the law in the way that it should be amended in the best interest of the Indians and of the community. It would give Congress an additional 9 months in which to make such amendment.

It seems doubtful that Mrs. GREEN can get her bill enacted at this session of Congress, but it does focus attention on the urgency of action lest the binding requirement of the present law get in its bite, which would be disastrous.

I understand the management team will recommend a definite program which will give the protection desired (though it probably will be fought hard by those Indians who want their full share right now). The Interior Department and Congress must be ready to act promptly on such recommendations, particularly so if H. R. 11660 is not enacted to extend the time by 9 months.

It is gratifying to see that Mrs. GREEN is taking hold of this problem (though the reservation is outside her district) and seems disposed to cooperate with the management specialists in developing a sound program for Klamath termination. I hope this may continue. Politics should be cast aside, and self-interest, and a program developed which will not encourage early pauperization of the Indians or dump their rich lands onto the market. The Government itself must provide the helping hand to effect a sensible transition of the Klamaths from tribal to free status.

A Subversive Thumbs His Nose

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Topanga, Calif., Journal of July 5, 1956:

A SUBVERSIVE THUMBS HIS NOSE

The Government of the United States is simply the creature of "we the people." We operate it as an instrument for our own self-government. Government has no rights save such as we the people endow it with in our own interest.

Therefore action of the Supreme Court by majority decision, in ruling that a Government employee, who was discharged as a security risk, has a right to his job because the job isn't in a sensitive category, must astound millions of Americans. A nonsensitive job, it would seem, is one offering less than ordinary chance for stealing a defense secret or blowing up the Capitol.

As to that angle, the three dissenters to the ruling pointed out that "the janitor might prove to be as important security-wise as the top employee in the building," and that the "ruling might leave the Government honeycombed with subversive employees." To our nonlegal thinking, that dissent makes sense unassailable. So does President Eisenhower, whose Executive order the Court decision overruled in this instance,

when he declares insistence upon complete and unswerving loyalty to the Constitution from every individual who is employed by the Government in any job of any nature.

This judicial event is disturbing because the overwhelming majority of the American people fear and detest the Communist world conspiracy as a menace to our freedom and our way of life. We burden our economy to arm against that conspiracy; we place our sons under arms; we form alliances with other free peoples. We the people effect this defense and safeguard through our servant, our Government.

Can it be justice that any known or suspected subversive has a right to a job in a Government that is of the people, by the people, and for the people? That he can thumb his nose at an Executive order of the President of the United States—an order executed under provisions of law passed by Congress? It is hard to believe so.

Great Plains Conservation Program

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of E. L. Peterson, Assistant Secretary of Agriculture, before the House Agricultural Committee relative to H. R. 11831 and H. R. 11833, the Great Plains conservation program:

GREAT PLAINS CONSERVATION PROGRAM

Mr. Chairman and members of the committee, I appreciate the opportunity of appearing before your committee to present information about amendments to the Soil Conservation and Domestic Allotment Act and the Agricultural Adjustment Act of 1938 that provide for furthering a conservation program in the Great Plains.

President Dwight D. Eisenhower on January 11, 1956 sent a message to both Houses of the Congress calling attention to the special problems that have long existed throughout the Great Plains region. He urged the Congress to consider and act on these problems during this session.

I quote from the President's message:

"The Great Plains region, a vast agricultural empire peopled by 17 million of our citizens, is an area of severe climatic variations which periodically produce widespread suffering and heavy economic losses. In this region farm families have a continuous struggle to protect their best cultivated and grazing lands against soil erosion during seasons of high winds and frequent periods of extremely dry weather. Some of the most critical problems of the area are the outgrowth of war when farmers and ranchers in the Great Plains States patriotically and energetically responded to their Government's call for greatly increased production to meet wartime demands by converting grasslands to cultivation.

"Because these problems directly concern the lives and prosperity of millions of American citizens, the Nation as a whole is directly concerned. Because all Americans are concerned with the maintenance and improvement of our soil and water resources, every citizen in the land has an interest in the solution of agricultural difficulties in the vast Great Plains areas."

EARLY HISTORY

Those early travelers who ventured across the plains called it an ocean of lush grass if their trip was during wet periods, but it was labeled "The Great American Desert" on maps of the region made before 1860. A prolonged drought occurred in the southern plains in the early 1890's. Some of the early settlers left the region at that time. Another long drought began in 1910 and lasted through 1913 over most of the plains. The drought of the thirties during which the area became known as the Dust Bowl persisted for 7 years in the southern plains and for 5 years in the northern plains. Most of you are familiar with the fact that thousands of farmers abandoned their farms and left the plains during this period. Rainfall was normal or above from 1940 through 1949.

Many new settlers came to the Great Plains in the 1940's, some to occupy farms that had been abandoned in the 1930's. They plowed up some 4 million acres of the remaining grasslands. Most of this plow-up was in the southern plains. The farmers and ranchers in the Great Plains States responded splendidly to the call of their Government for greatly increased production during World War II. This region is now suffering some of the results of continuing in effect wartime production incentives long after the emergency demand has ended.

THE PRESENT DROUGHT

The present drought returned to the southern plains in the early 1950's. In 1952 it had spread to all the plains region. Over most of the northern plains the drought lasted only 1 year. But it has persisted in the southern plains. According to local estimates nearly 16 million acres of land were damaged by wind erosion in the spring and early summer of 1955, and about 10 million acres have been damaged during the same period this year. It is reported that eastern Colorado has the poorest wheat crop of recent years. It is less than half of the average for the past 10 years.

In February 1954 the Department of Agriculture began intensive studies of the damage from drought in the southern plains. This study which as it developed became cooperative with the Great Plains Council led to the development of a program for the Great Plains (USDA Miscellaneous Publication No. 709, January 1956).

SOIL CONSERVATION

Early in the 1930's a soil conservation project was established near Dalhart, Tex., to determine what practices and measures might be applicable in proper use and management of land, to holding the soil in place, and to demonstrate to farmers how these measures could be applied. In 1938, farmers and ranchers stated to organize soil conservation districts to cope with the problem. There are nearly 200 districts organized and in operation in the wind erosion area of the Great Plains now. More than half of the farmers and ranchers in this area are cooperators with their soil conservation district. With assistance from the Agricultural Conservation Program farmers and ranchers have treated 12 percent of the cropland and 22 percent of the range land in the affected area.

A phase of Federal assistance in the Great Plains during the 1930's was the land utilization program. Projects established under that program involved the purchase of 1,100,000 acres of private land almost all of which has since been converted to grazing land. These projects are now managed by the Forest Service.

SOME OF THE PROBLEMS

Estimates made from scattered soil surveys indicate that not quite one-third of the affected area in the southern plains is suitable for continuous cropping under proper management. Unfortunately, there is somewhere between 11 and 14 million acres now being cultivated that should not be. This is the land on which wheat and cotton crops have failed year after year and, even in favorable seasons, rarely makes satisfactory yields. This acreage constitutes one of the major problems of the area.

In addition to the problem of proper land use, flexible cropping systems are recommended for the area in order to take advantage of the weather cycle. Stubble mulching and proper management of residues is needed in order to retain residues on the land. Strip cropping is needed in most areas, and contouring and level-terracing are recommended as water conservation measures. Good grass management to retain sufficient ground cover is needed on grazing lands. Also involved is sufficient water and salting places to permit even grazing. Contouring, water-spreading, and reseeding are needed on range land locally.

Another major problem is that of the size of both farm and ranch units. The units in the drier portions of the Great Plains should include sufficient acreage of cropland, at least 300 or more acres, so as to be efficient from the standpoint of inputs of labor, machinery and equipment. Experience has indicated that ranches of less than 125 animal units are seldom successful. Provision needs to be made for at least a 2-year forage supply to be continuously on hand.

EMERGENCY PROGRAMS

A short-term or emergency program for plowing cropland has been in effect for the last two seasons. This program is directed toward (a) emergency tillage and (b) establishing emergency cover. It is estimated that nearly 10 million acres were chiseled or listed by farmers this spring. Some of these fields were tilled twice or three times to protect the soil from blowing. However, such tillage has been effective in achieving only partial stabilization. Emergency cover of some kind should be established at the first opportunity on blowing fields, that is as soon as enough rainfall comes to permit growing of cover crops.

LONG RANGE PROGRAM

The objective of the program

The goal to be achieved is a more stable agriculture, more dependable sources of income, and progressively satisfactory livelihood for the people of the region. To achieve this goal, there must be widespread use of good soil management and water conservation practices and adjustments in sizes and types of farms which will enable farmers and ranchers to effectively cope with the climatic hazards of the region.

There must also be complete understanding of the objective and coordinated teamwork on the part of all concerned, farmers, landowners, civic and agricultural groups, private industry, local, State, and Federal agencies and governments, in order to translate this program into action to create a more stable economy and for maximum benefits to all the residents of the Great Plains.

ACTION BEING TAKEN BY THE UNITED STATES DEPARTMENT OF AGRICULTURE

The following actions have been taken by the United States Department of Agriculture to assist farm and ranch operators of the region in the solution of their problems.

1. Land classification intensified

The Soil Conservation Service has moved ahead its soil survey work to be able to make available, farm by farm, this basic information for the proper use and management of the land in the Great Plains. This survey work is being concentrated first on the remainder of the cropland in the critical wind erosion areas.

This inventory of the soil will provide a basis for the land capability classification, which is a very useful tool in making adjustments for a more stable agriculture. Additional experienced personnel have been added to the present staff to complete the survey in the critical wind-erosion areas of the Great Plains area as rapidly as possible.

2. Technical assistance for conservation measures

The program of on-the-farm technical assistance in soil and water conservation is being accelerated by the Soil Conservation Service. Additional technicians are being provided in those districts of the Great Plains where farmers and ranchers have made requests, and where such help is necessary to accelerate other State and Federal programs.

3. Cost sharing for conservation

The policy of the Agricultural Conservation Program Service continues to be one of sharing with farmers and ranchers the cost of installing and establishing those practices which are most enduring and most needed but which are not now a part of their normal farm and ranch operations.

The ACP cost-sharing program on those practices that are intended to bring about those land use adjustments required for a long-range program are being accelerated and rates of payment have been made more flexible.

4. Credit for the area

Private and cooperative lenders, historically the chief source of agricultural credit will continue to be encouraged to provide maximum sound credit assistance to the majority of farmers, ranchers and their cooperative organizations.

A review of the need for and the possibility of modifying regulations, supervisory requirements, and Federal banking laws to enable bankers to meet the problems of carrying good risks through an emergency period such as a drought disaster and making more intermediate term loans, is now in progress.

All lenders, cooperative, private, and governmental, should take into consideration, in their credit policies, proper land use and sound management practices, as well as the size and type of the operation.

All lenders are being encouraged to meet the need for intermediate and long-term credit to permit the enlargement and adaptation of farm units that are now too small or improperly organized to make the best use of resources.

5. Credit program of Farmers' Home Administration

The Farmers' Home Administration has developed and placed in operation in a great many counties a credit program designed especially for landowners and operators. In substance, its provisions are as follows:

(a) Loans for reseeding and the establishment of grasslands and other approved conservation and land-use practices.

(b) Loans for soil and water erosion control measures.

(c) Loans for the improvement and development of domestic and irrigation water supplies, for the repair and improvement of existing farm buildings, and for the purchase of such additional land as may be necessary to enlarge a farm into a family-type size unit.

(d) Loans for the purchase of livestock, farm equipment, seed, fertilizer, feed for livestock, insecticides, farm supplies, and for farm equipment repairs, the payment of interest, insurance, and taxes, including the refinancing of existing chattel debts, where necessary.

(e) Assistance to both creditors and debtors in effecting voluntary debt adjustments so that the debt load on the farmer or rancher will be held to a point within his ability to repay.

(f) Loans are predicated on farming operations that are consistent with recommended land use and farm management practices for the area.

(g) Terms in all instances are geared to the expected repayment ability of the borrower.

Additional field personnel have been added to the staff in the Great Plains region to assure proper attention to the making and servicing of these and other loans handled by the Farmers' Home Administration. This new special loan program supplements the regular programs of the agency and the credit now available from private, cooperative and other governmental sources. Loans are made only to farmers and ranchers who are unable to obtain necessary credit at reasonable rates and terms from other lenders.

6. Federal crop insurance strengthened

Crop insurance is being further developed and strengthened to eventually serve as a major protective measure against crop losses in all areas suitable for arable farming. It may be necessary to extend the contract of insurance over more than one crop year in order to equalize premiums and losses. Standards of performance in carrying out risk-reducing practices are required in the insurance contract.

Changes are being developed in the contract provisions for the wind erosion counties designed to encourage insured farmers to plant cover crops early and to refrain from summer fallowing the same land more than 1 year when the winter wheat crop is lost early in the season.

Crop insurance is not available on land unsuited for the long-time production of the insured crop. Crop insurance most eventually operate on a sound actuarial basis. In the interest of developing and maintaining a sound insurance program, local leaders and agencies are being encouraged to assist the Federal Crop Insurance Corporation in screening out land use and farming practices which should not be insured, and to determine if there are farming practices which should be an eligibility requirement.

Where crop insurance is available, farmers are encouraged to join in building a sound and lasting crop insurance program to stabilize the agricultural economy of the individual and the area. All department agencies have been instructed to encourage eligible producers to carry crop insurance.

7. Weather reports and research

There is great need for determining the incidence and range of weather variation and its relationship to crop yields, and the mapping of climatic patterns by major climatic and soil areas of the plains as a means of clarfying weather risk. The Weather Bureau and the Department have developed additional types of weather research which will achieve this result. Arrangements are being made for cooperative weather projects with land-grant colleges in the region.

8. Research

In order to provide a continuing basis for intelligent action on problems facing farmers and ranchers in the Great Plains, an expanded, sustained, cooperative, and coordinated program of research is being developed and will be vigorously conducted by the Agricultural Research Service in cooperation with State experiment stations. Arrangements are being made through the Great Plains Agricultural Council to inventory and summarize the results of research which are now available. Full use will be made of available research in the guidance of this program.

In the areas which are physically adapted for continuous crop production, further research will be directed toward controlling wind and water erosion and improving the soil, crop yields, livestock production, and the income expectancy, and toward the creation of cash and commodity reserves which are essential to carry farmers and ranchers through any drought years.

In the areas with soil which is not suitable for arable farming, intensified research is being inaugurated to guide an orderly and economically sound transition into grazing and livestock, and to prevent a recurrence of the distress caused by the cultivation of unsuitable land in high rainfall years. Research is being intensified to determine methods and costs of establishing a satisfactory stand and growth of grass and the rate of stocking on regrassed lands.

Farm and ranch marketing and production supply procurement problems, that will grow out of the proposed land-use adjustments, are being given consideration and study.

9. Extension education

Following the initiation of the Great Plains program, the stepped-up work of extension has reached varying degrees of intensity in the 10 States.

In Montana, extension has expaneded its program in range management and is working closely with soil conservation districts and the agricultural conservation program on soil and water conservation. Nebraska has employed one full-time man on wind-erosion problems who is conducting demonstrations with stubble mulch for erosion control. In Colorado, the program projection effort is concentrated in the 17 southeastern counties where the wind-erosion problem is most severe. Farm and home development work in these same 17 counties is already resulting in significant production adjustments on many farm and ranch units. Oklahoma and Texas have likewise made special efforts in stepping up their long-time planning in the Great Plains areas. In North Dakota the emphasis has been on soil surveys, soil testing, soil and water seminars, and irrigation. Most of the States have held statewide meetings of all the agencies to discuss the problems of the region. The Great Plains film project has under way seven films applicable to wind-erosion areas and part of these films will be available early next year.

Some of the most intensive work has been done in Kansas where two full-time men were employed in 1955 to work with the 31 counties in the western part of the State. In February of 1956, with the initiation of the State Committee of Agricultural Agencies, two meetings were held in that area, which were attended by county delegates of State agencies, farm organization leaders, and county planning committees of farmers. Each county was presented a table of 25-year trends in land use, size of farms, incomes, type of farming, tenure, and wheat abandonment and crop yields. They were also presented results of the 1936–40 land use planning tables for each county, together with 1954 land use.

The county farmer committees were asked to discuss problems now facing them; what has been the contribution of price supports and wheat allotments to the changes; what changes in allotments and price support programs would contribute to stability; what land use adjustments are now needed?

Adjustments suggested by county committees involved a net reduction of 206,000 acres of wheat, a larger reduction in grain sorghums (below 1954) and 1,034,000 acres to be returned to grass.

A summary of the county committee meeting reports was presented and the group discussed their problems under six headings: (1) Land use, (2) wheat problems, (3) livestock and feed reserves, (4) erosion, (5) fluctuating income and credit, and (6) new proposals. Typical of the new proposals made is:

"Locally administered regulations on hazardous farming operations are needed. Those farming practices that contribute to wind erosion are a community problem as well as an individual problem. The penal-

ties for following such practices should include the loss of ASC benefits administered by subject to the discretion of local county committees. It was recommended that wind erosion payments be directed at encouraging preventative wind erosion practices or measures (cover crops, water conservation measures, etc.) rather than operated on an emergency basis."

In county meetings some decisions were made for positive action in 1956. Where items of emphasis were agreed upon, the responsibility of each agency in the county was spelled out and they are all now engaged in trying to make their maximum contribution under present programs.

The Federal Extension Service is continuing to assist land-grant colleges and their extension services in further strengthening their educational programs by placing special emphasis on practical ways and means of making major adjustments in land use and good farm and ranch management to better assure a stable agricultural economy over a sustained period.

DIVISION OF RESPONSIBILITIES

Landowners and operators and local leaders

The ownership and operation of land carries with it the primary responsibility for maintaining its productive capacity by following proper land use practices.

Landowners and operators are responsible, especially when using publicly supported programs or facilities, to so apply their benefits as to preserve and enhance the value of their land. They should also assume the responsibility for participating in, and contributing to, the formation and development of policies and programs which are adapted to the needs of their area.

Civic, farm, and business interests in the area should assume local leadership. To be successful, any program will require recognition of problems locally, and a willingness on the part of all concerned to accept their full share of the responsibility and leadership for the solution of the problem.

County and State governments

The provisions of the bill involve a contract between the producer and the Secretary of Agriculture. Some protection is afforded to the Government in that the producer must develop and agree to a conservation plan and that he forfeits all rights to payments or grants and must refund to the United States upon his violation of the contract. However, to be successful the Great Plains program will require recognition of problems locally and at the State level and a willingness on the part of all concerned to accept their full share of the responsibility and leadership for the solution of the problem.

County governments can help in such activities as land classification, tax adjustment procedures and stimulating community action. State governments can facilitate the program by assuming the responsibility for meeting the problems of proper land use; providing funds for research, education, regulatory, and action programs needed to assist landowners and operators in achieving recognized standards of proper land use; by reviewing water resource programs in their State and by the enactment of legislation for the implementation of these and other segments of needed programs.

PROVIDING FOR A GREAT PLAINS CONSERVATION PROGRAM

Most of the programs which have been described have been put into operation by the agencies of the Department of Agriculture under existing authority. However, because of the nature of the problem some additional authority is requested. It pertains primarily to helping a farmer or rancher to complete the application of a conservation plan once he has agreed to it.

The bills now under consideration would accomplish the purpose of assuring the producers in the area of continuing assistance over a period of years. This will enable them to install the conservation measures and make the changes in land use which they agree are needed for their unit. This program would be in addition to other programs offered by the Department to the farm and ranch operators in the area.

The agricultural conservation program is an annual offer to farmers and ranchers practice by practice. Under it costs are shared with the producers who carry out certain conservation measures to the extent which they are able with their own financial resources plus the cost-shares offered under the ACP, augmented by the technical, educational, and research efforts of the Department.

The recently enacted soil-bank program will likewise be available to farm and ranch operators in the area. This is essentially a device to adjust production of surplus crops to effective demand. It approaches the problem commodity by commodity. Naturally we expect certain conservation measures to be carried out under the acreage reserve. We also anticipate substantial conservation accomplishments under the conservation reserve phase of the program. However, that is not the main purpose of the soil-bank legislation. It is directed toward immediate shifts in land use rather than those to be made under a long-range program such as provided in the legislation under consideration here.

Under the program proposed in this legislation the conservation problem would be taken up for a farm or ranch in its entirety. A long-time program of conservation and land-use adjustment would be worked out with the producer in accordance with the capabilities of each farm or ranch. This would include a schedule of land-use adjustments and conservation measures considered essential for the most efficient operation of the farm or ranch unit. Assistance would be given for the installation of the necessary conservation measures. Under the terms of the long-time contract proposed the operators would be assured of continuing assistance as they move forward in the installation or inauguration of the various segments of the plan developed for their operating unit.

In the 10 Great Plains States there are estimated to be between 11 and 14 million acres of cropland in the area unsuited for continuous crop production which should be seeded to permanent vegetative cover. The Department has estimated that approximately 10 million acres of this erosive land would eventially come under the terms of this program. On the basis of sharing 80 percent of the cost of seeding it has been estimated that program costs of about $112 million would be incurred for this purpose. We have also estimated that about 6 million acres of range land needs to be reseeded. On the same basis of cost sharing we have estimated a program cost of $30 million. Related conservation range practices such as livestock watering facilities may need to be installed on the area shifted into grazing use. We estimated the cost of these facilitating measures at about $8 million.

The amendment proposed to section 334 of the Agricultural Adjustment Act of 1938, as amended, would maintain the wheat history on the farms and ranches participating in the program. It is essentially the same provision as that contained in section 307 of the Soil Bank Act except that it would continue for the life of the contract and will serve the same purpose—That is, give farmers more assurance that their acreage allotments will be protected while the land use adjustments are being made.

All agencies of the Department will continue to work at the problems in the Great Plains under their existing authorities. Projects will be carried out on farms and ranches moving as fast and as far as the operators are able to do with their financial resources.

Because of the nature of the problem in the Great Plains area we, in the Department, feel that to adequately meet the situation a long-term approach must be taken and assurance of continuing assistance be offered if the desired accomplishments are to be achieved.

In order to fully implement a long-range program we need authority for long-term commitments on ACP cost-sharing which these bills would provide.

We will appreciate your favorable action on the proposed legislation.

Thank you.

Eisenhower Has Never Understood Necessity for Continuous Policy Leadership

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mr. PRICE. Mr. Speaker, it is not a partisan statement to suggest that the basic weakness of this administration arises from the fact that the President himself—before his illnesses, even—has never understood the necessity for continuous policy leadership.

In this connection, I offer for insertion in the RECORD an editorial from the St. Louis Post-Dispatch pointing out that the "translation of policy into action is a political task which cannot be delegated to anybody" by the Chief Executive:

RANDALL FOR DODGE

To appreciate the full flavor of President Eisenhower's appointment of C. B. Randall as a special assistant on foreign economic policy, one has to go back to the appointment of Mr. Randall's predecessor.

It was more than a year and a half ago—in December, 1954—that the President called in Joseph M. Dodge, the Detroit banker who had been his first budget director, and gave him the job of framing a coherent policy for the employment of American economic power overseas.

Those were the days when Harold E. Stassen and Secretary of the Treasury Humphrey were quarreling over a big versus little economic aid program. Mr. Dodge was supposed to reconcile the conflicting points of view and "organize this country's world-wide economic struggle against the spread of communism," as the news dispatches said at the time.

Some of the more excitable correspondents wrote that his assignment "paralleled in some respects the unification of the military services." The Council of Foreign Economic Policy which he set up would "be comparable to the top-level National Security Council." Here, the Nation was told, would be America's answer to the shifting of cold war emphasis from military to economic competition, then already under way.

Such was the prospectus. Now, 19 months later, Mr. Dodge is stepping out in favor of Mr. Randall. He leaves behind him no visible effect whatever on foreign economic policy. His great task has been scarcely heard of from that day to this. Foreign aid is still overwhelmingly military in character. The administration still goes through a catch-as-catch-can fight with Congress for a hastily improvised economic-aid program every year. The same old slogans and same old

formulas are still being bandied about, with steadily diminishing effect. There is still talk of—but little appreciable movement toward—reorienting American policy to the new Soviet emphasis on political and economic competition.

If Mr. Randall can do in Mr. Dodge's job what the White House 19 months ago intimated would be done, he will perform a valuable service. Yet he himself is a veteran, with battle scars, of another presidential commission, the one that was supposed to wave the wand of "trade not aid," and settle the tariff-reciprocal-trade problem once and for all. Needless to say, it didn't.

Presidential commissions and councils, in fact, seldom succeed in solving problems. They can be useful in helping decide what line policy should take, but the translation of policy into action is a political task which cannot be delegated to anybody. That is a responsibility which only the President, by continuous and effective political leadership, can discharge.

Threat to Klamath Assets

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mrs. GREEN of Oregon. Mr. Speaker, I ask permission to place in the RECORD an editorial of July 3, 1956, from one of our two leading newspapers in Portland, the Oregon Journal, which expresses concern over the jeopardy in which the nearly $100 million of assets and the welfare of the over 2,000 Klamath tribal members are placed by the shortcomings of the proposed termination of Federal control under Public Law 587. I feel this editorial speaks for informed and responsible Oregonians who are disturbed by this situation, regardless of party.

THREAT TO KLAMATH TRIBAL ASSETS

The Klamath Indian Reservation contains what has been described as one of the finest timber stands in the Nation. Its value has been estimated as high as $75 million.

It includes more than 600,000 acres in tribal ownership and about 150,000 acres owned by individual Indians under allotment.

Under terms of the Klamath Indian Reservation Termination Act, all the reservation's assets, including the timber, must be sold and the proceeds distributed to the Indians by August 13, 1958.

Under the Bureau of Indian Affairs, the Klamath timber has been ably managed on a sustained yield basis.

Many of those close to the picture now fear that disposal of the timber to private operators will mean the end of sustained yield management and a destruction of the stand by clear cutting. This would deal a great economic blow to Klamath County.

One of those expressing this fear is T. B. Watters, of Klamath Falls, one of the management specialists appointed to carry out liquidation and distribution of reservation assets. Recommendation of Government purchase of the timber is under consideration, according to Watters.

The management group also is concerned with some of the human problems relating to termination. It recommends that if Congress makes possible purchase of the reservation, certain rights be retained by tribal members, particularly having to do with hunting and fishing.

Another lesser known reservation asset which could be threatened by termination is the 70,000-acre upper Klamath marsh, which the Journal's outdoor editor, Tom McAllister, considers the finest breeding ground for waterfowl in this region. Drainage of the marsh for agricultural use is a distinct possibility, though the land would be relatively poor for this purpose, and McAllister believes its greatest value is in its present state.

For the purpose of permitting a more orderly disposition of reservation property and assets, Representative EDITH GREEN, Democrat, of Oregon, has introduced an amendment calling for a 9-month waiting period after completion of the appraisal of tribal assets and the submission of a termination plan to the Secretary of the Interior before any further action could be taken. Under the present law, piecemeal sales could be made immediately upon completion of appraisal. Senator RICHARD L. NEUBERGER, Democrat, of Oregon, member of the Indian Affairs Subcommittee, has voiced similar concern over the dangers of piecemeal liquidation.

The Journal does not pretend to know what should be the final disposition of the reservation, but it believes these assets should be preserved and managed. To permit the working out of an orderly plan, more time is needed, and Mrs. Green's amendment is a sensible step.

Today's Heritage From 1776 Spark

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. CHIPERFIELD. Mr. Speaker, about the 4th of July I placed in the RECORD the story of how the Honorable William Tyler Page came to write the American's Creed. This was commented on favorably by a number of people who happened to read it and several Members of the Sons of the American Revolution have suggested that I place the following article by George Todt in the RECORD. It calls attention to the patriots who signed the Declaration of Independence which was one of the documents that inspired the writing of the American's Creed.

THE AMERICAN'S CREED

"I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its Flag; and to defend it against all enemies."

(William Tyler Page, Handbook, Sons of the American Revolution.)

Just 180 years ago to the day, 56 of the bravest men in history signed what many consider to have been the greatest libertarian document in the upward struggle of mankind—The Declaration of Independence in Congress, July 4, 1776: The Unanimous Declaration of the Thirteen United States of America.

These noble patriots risked their lives, their fortunes, and their sacred honor—than which it is impossible to risk more—but they parlayed their freedom sweepstakes into what was destined to become the mightiest nation on the world stage less than 200 years later. How many of us today would do what they did then? Are we still possessed with that kind of transcendant courage? Do we have the same full measure of devotion to America as did our ancestors?

Whatever our sympathies now, none of us should fail to feel a deep sense of gratitude to the patriotic American nationalists of a bygone day who overthrew the oppressive European system of despotism and tyranny which shackled them and made it possible for us, their inheritors, to live as our own masters in an enlightened and progressive libertarian Republic. They sparked the world's greatest experiment in human self-government witnessed to date; the idea that the masses of mankind were to be considered fit to rule themselves through representatives elected by the free will of the governed was—and still is—the most revolutionary political concept known to the world in more than 5,000 years of recorded history.

Those who decry our traditional form of constitutional Government as reactionary and out of date are usually, ideologically speaking, nothing less than totalitarian wolves in the clothing of Marxist propaganda sheep. These are the people who wear psychological blinders when it comes to finding the least bit of fault with overly centralized government, bureaucracy, or collectivism of any kind. While few, if any, would desire a king in the United States—nevertheless there are many who would welcome a dictator. What's the difference? Isn't it un-American to want either variety of despot? Wouldn't we gain for ourselves a tyrant in each case? And if we ever should—here's a final question: How would we go about getting a tyrant out of office if we didn't like him?

While we sweat out the answers to these simple questions, let's pay tribute in our hearts to some real American patriots who struck a major blow for freedom everywhere when they placed their signatures upon the Declaration of Independence. Here is the roster, by States:

Connecticut—Samuel Huntington, Roger Sherman, William Williams, and Oliver Wolcott; Delaware—Thomas McKean, George Read, and Caesar Rodney; Georgia—Button Gwinnet, Lyman Hall, and George Walton; Maryland—Charles Carroll, Samuel Chase, William Paca, and Thomas Stone; Massachusetts—John Adams, Samuel Adams, Elbridge Gerry, and Robert Treat Paine; New Hampshire—Josiah Bartlett, Matthew Thornton, and William Whipple; New Jersey—Abraham Clark, John Hart, Fraser Hopkinson, Richard Stockton, and John Witherspoon; New York—William Floyd, John Hancock, Francis Lewis, Phillip Livingston, and Lewis Morris; North Carolina—Joseph Hewes, William Hooper and John Penn; Pennsylvania—George Clymer, Benjamin Franklin, Robert Morris, John Morton, George Ross, Benjamin Rush, James Smith, George Taylor, and James Wilson; Rhode Island—William Ellery and Stephen Hopkins; South Carolina—Thomas Heyward, Jr., Thomas Lynch, Jr., Arthur Middleton and Edward Rutledge; Virginia—Carter Braxton, Benjamin Harrison, Thomas Jefferson, Francis Lightfoot Lee, Richard Henry Lee, Thomas Nelson, Jr., and George Wythe.

Let's hang out our flags at home today with pride and joy in our hearts. Have we ever stopped to consider what it might be like to have another besides Old Glory over us?

Address of Welcome by Brig. Gen. Thomas A. Lane, National Rivers and Harbors Congress, May 11, 1956

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address of welcome given by Brig. Gen. Thomas A. Lane to the National Rivers and Harbors Congress on May 11, 1956:

On behalf of the Board of Commissioners of the District of Columbia, it gives me great pleasure to welcome you to your national capital for your 43d Annual Convention. We who live and work here are proud of this beautiful city which is our home and your home. We know that you have come not only to attend to your serious business, but also to have fun. I can only assure you that this is the way we want it.

Annually, your Congress serves to focus attention on the wise development and utilization of our water resources. Each year we can review the progress made and look ahead to new aims for the coming year. As you do this, on a national scale, we do it here for our own river basin.

When we look at our own river basin, the beautiful Potomac, we are filled with dismay. We have one of the few great river basins of the country which does not have on authorized comprehensive plan.

We have a channel project to the city of Washington which sorely needs a new planned development. Our neighbors in Alexandria have recently taken the lead in planning for the rebuilding of their ancient port to meet the potential of modern water traffic for this great and rapidly growing metropolitan area. We need not merely a navigation improvement, but a comprehensive plan for developing the potential of water transport for the area. Our citizens have work cut out for them.

We have a local flood-control project for the city of Washington which is incomplete and inadequate. We are perfectly safe as long as we don't have floods. But we ask ourselves. "What would we have done if the storms which burst over New England and California in the past year had struck us?" Could we have muddled through somehow? Not without severe damage to our city and especially to our Federal buildings in the lower areas of the city.

We used to think that the flow of our river was enough to meet all demands of the foreseeable future. In the past year, however, we have taken another look at this problem and found that the demands for water have grown so rapidly that we are facing the prospect of water shortage in about 25 years unless we provide storage in our river basin.

During the year we have labored to reduce pollution in the Potomac River. All of our communities are cooperating. The District of Columbia program for secondary treatment of sewage has been accelerated in this year to move our plant-completion date from 1960 forward to 1958. Our prospects for the cleanup of the Potomac are the best we have had in 20 years. Yet, this improvement will come none too soon. In recent years we have had a great increase in the popularity of water sports. Through the work of our Washington Rowing Association and our President's Cup Regatta Committee we have attracted major national races to this National Capital area. We hope that you will see the intercollegiate eastern sprint championship races tomorrow off Hains Point. Yet the real potential of our great river for sports has hardly been tapped.

We have added a million persons to our population of the Washington metropolitan area in the past 15 years. We shall probably add another million in the next 25 years. This population pressure places a tremendous demand on us for the conservation of our water resources. It opens up new prospects for transportation to serve the area. It places a great responsibility on all of us to plan wisely and prepare in time for both the disasters which may befall us and the great benefits which challenge us.

We are pleased that the Senate Public Works Committee has authorized the Chief of Engineers to review prior comprehensive surveys of the Potomac River Basin. We expect from this review to develop a program worthy of the National Capital and the great river which flows through it.

If we all have a growing concern about water resources, this is because water resources are of vital importance to the well-being of our country. Our technical magazines have long acquainted us with the inadequate water resources of many sections of the country. The recent interview of the Chief of Engineers by a national news magazine, U. S. News & World Report, however, reflects the growing interest of every citizen of our country in this matter.

Yes, the responsibilities which you have carried so admirably in the past assume greater importance as we look ahead. Your task is growing every year. As you assemble once more for your annual convention, Washington not only welcomes you, but salutes you for your notable service in the development and use of our national water resources. Our best wishes for your success here today and in the year ahead.

Schedule of Conferences and Visits With Residents of the Fourth Ohio District

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. McCULLOCH. Mr. Speaker, I believe that a Congressman should be in his district to confer and visit with his constituents whenever official duties do not require him to be in Washington.

When Congress adjourns in a few weeks, I expect to return home and to be available for conferences and visits with residents of the fourth district in the courthouse of each county seat between 8 a. m. and 4 p. m., in accordance with the following schedule:

Lima, Allen County: Tuesday, August 14.

Wapakoneta, Auglaize County: Wednesday, August 15.

Greenville, Darke County: Thursday, August 16.

Eaton, Preble County: Monday, August 20.

Celina, Mercer County: Wednesday, August 22.

Troy, Miami County: Thursday, August 23.

Sidney, Shelby County: Tuesday, August 28.

No appointments will be necessary. Any problem with, or opinion concerning, the Federal Government will be proper subject for conference.

Of course, I will be glad to see residents of the district, in my Piqua office, any time that the Congress is not in session, except on the days scheduled above.

Approval of H. R. 12061 Vital to American Leadership in Atomic Power

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. PRICE. Mr. Speaker, I include herewith a statement from the Honorable Walter P. Reuther, president of the United Auto Workers, urging need for H. R. 12061 to maintain United States leadership in development of atomic power:

INTERNATIONAL UNION, UNITED AUTOMOBILE, AIRCRAFT, AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, UAW,
Washington, D. C., July 17, 1956.

Hon. C. MELVIN PRICE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PRICE: The Senate has passed the Gore bill (S. 1333) authorizing and directing the Atomic Energy Commission to construct large-scale prototype demonstration power reactors to be located at, and supply power to, AEC production facilities.

It also makes AEC responsible for a vigorous program of cooperation and assistance abroad with respect to the design, construction, and operation of atomc power reactors.

UAW President Walter P. Reuther, as a member of the panel on the peaceful uses of atomic energy, urged the need for such legislation in the separate views which he filed last January with the Joint Committee on Atomic Energy. Excerpts from his statement are enclosed herewith.

We ask you to examine our reasons for believing that this legislation is of vital importance to the interests of the United States, both at home and abroad, and should be enacted at this session of Congress.

We recommend also that you read the two concise statements explaining the need for this legislation filed by Senator ANDERSON during the Senate debate and reprinted on pages 11284 and 11285 of the CONGRESSIONAL RECORD for July 12.

Sincerely yours,

PAUL SIFTON,
National Legislative Representative.

EXCERPTS FROM SEPARATE OPINION BY WALTER P. REUTHER ON CERTAIN ASPECTS OF THE REPORT OF THE PANEL ON THE PEACEFUL USES OF ATOMIC ENERGY TO THE JOINT CONGRESSIONAL COMMITTEE ON ATOMIC ENERGY, JANUARY 1956

* * * * *

In the cold war—in freedom's struggle against the forces of Communist tyranny—in the struggle for the hearts and minds of men—speed, all possible speed, in harnessing the atom to man's peacetime needs can be decisive.

* * * * *

We shall not give leadership to other peoples if we refuse to exercise it in our own behalf. The fact is that the United States is

failing to demonstrate the outstanding leadership in releasing atomic energy for peaceful purposes which it demonstrated in putting the atom to work for war.

We are not moving with speed and determination to convert atomic energy into an instrument of peaceful progress. Our program for developing atomic energy as a source of electric power is moving much too slowly.

* * * * *

The need to develop atomic energy as a practical source of power for use in the United States is urgent. There are power-hungry areas in our country today. There are other areas where the high cost of power retards economic progress and is encouraging the flight of industry to other parts of the country.

* * * * *

To meet the challenge and to realize the opportunity of the peaceful uses of atomic energy, we must mobilize all our forces and enlist the active participation of every segment of our economy. We must make full use of the capabilities both of government and of private enterprise. Only by drawing upon the special contributions of each can we make satisfactory progress toward our objectives—fortifying the strength of our Nation, advancing the welfare of our people and discharging our world responsibilities.

* * * * *

As to the next stage of the program, I question whether the present AEC policy of placing prime responsibility on private utility companies to provide risk capital for the construction and testing of full-scale demonstration reactors is sound. I share the point of view that the productive know-how and managerial skill of American private enterprise can make an important contribution to this phase of development, providing, however, the Government takes the initiative and assumes the financial risks involved in the construction and testing of these full-scale reactors. Building these first full-scale power reactors is an extension of the research and experimental work which only the Government is capable of performing under present circumstances. Accordingly, I suggest that the AEC policy of placing primary reliance on private enterprise at this stage of development be subjected to early review and reappraisal by the Joint Committee.

* * * * *

The AEC program for getting us through this development phase is to turn the primary responsibility over to electric utility companies, or groups of them, who in turn call upon manufacturers to contribute designs and build the components. While AEC will furnish information, assist in research and development, make nuclear fuel available at low rentals, reprocess spent fuel, and lend considerable financial assistance, it still requires private participants to take the basic risk and gives priority to proposals which impose least financial burden upon the Government.

AEC policy thus seeks to achieve two purposes at once: To promote the development of nuclear power, and to transfer to private enterprise a major part of the initiative and responsibility.

The Panel Report recognizes that it may not prove possible to achieve these two purposes simultaneously. It recommends that in the event industry does not take on the full risks and burdens which AEC has assigned to it, the AEC should construct a full-scale demonstration reactor of each major type and bring atomic power to a point where it can be used effectively and widely on a competitive basis.

In support of the Panel's recommendations, I urge the Joint Committee to institute early inquiry in order to determine how far and how fast private enterprise can and will assume the full risks and burdens of getting us over the hump and on to the highroad of practical nuclear power.

* * * * *

Manufacturers of equipment in this field have shown a great interest and undoubtedly have a vital contribution to make, but their experience and inventive qualities are brought into play only as they are engaged to join in the actual construction of a full-scale demonstration reactor. If the initiative in such construction is left in the hands of the private utilities at this stage of the program, the manufacturers' creative contribution will not be fully realized.

* * * * *

The attempt by AEC to transfer prime responsibility to private enterprise at this time appears to be premature. If, as a result, we continue to encounter serious delay in nuclear power development, we shall be guilty of pursuing a doctrinaire "free enterprise" approach to a problem which, at least for the present, is essentially national in purpose and scope and involves risks and losses of a magnitude which only Government can reasonably be expected to incur.

The development of large-scale reactors is, essentially, an experimental operation—as fully experimental as the construction of the small research reactors for which AEC is assuming the full responsibility and cost. If it is economically sound and proper for the Government to bear the burden of primary research in building the small experimental reactors, it would appear to be equally sound and proper for the Government to carry the major responsibility and risk in the second phase of experimentation—the building of full-scale demonstration reactors.

* * * * *

We do the utility companies no service by asking them to accept burdens which in view of all the unknowns in the present state of atomic technology they cannot finance as sound or normal business venture. We do them no disservice when we ask the Government to recognize the national importance and scope of the task at hand, to carry the basic risk of this full-scale reactor development, while affording the designing and manufacturing segments of private enterprise full opportunity to make their valuable contributions to the program.

The ingredients of the present situation do not add up to a formula for progress. If we want useful civilian atomic energy as soon as we can get it, both for domestic use and for international purposes, something must be done, starting immediately, to solve and overcome the many important technological problems that stand in the way.

Only bold initiative by Government can accelerate needed progress and get full-scale reactors in operation so that the time lag between theory and practice can be minimized. Only when the Government has completed both phases of this basic research work of completing and getting into operation both the model reactors and the full-scale demonstration reactors, can we expect to get the influx of private risk capital and the resulting full impact of the dynamic qualities of individual initiative essential to carry the program to higher levels of development.

I hope that the ideological barrier will not be raised against my recommendation that the joint committee examine AEC development policy with a view to putting AEC to work building demonstration reactors, as the 1954 act already authorizes it to do.

Neither Government nor industry can do this job alone. It was the blending of the special contributions of each that provided the genius which gave America the atomic know-how to produce the first bomb. At this stage of our national atomic effort, nothing could be more tragic than to split our forces by engaging in a sterile and senseless fighting of ideological windmills. Our free-enterprise system is not being challenged in America. If it were, less than 1 percent of the American people would support such a challenge, for the American people understand clearly that our free economy motivated by individual initiative and enterprise has given them a higher standard of living than any other people enjoy. We must approach this problem free from preconceived prejudices or fixed theoretical or ideological positions. We need to make judgments on a sane and sensible basis as to how best we can, as a free nation and a free people, get the job done.

Personalities in Government

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. HESS. Mr. Speaker, the powerful radio station at Cincinnati, WLW, long has been highly popular with the people in a 100-mile radius of Cincinnati because of its unceasing effort to be of genuine public service. One of WLW's best-known features has been a weekly Sunday broadcast titled "Personalities in Your Government." Some months ago the program was devoted to Indiana Congressman EARL WILSON, a veteran of 16 years' service in this Chamber. I have worked with Mr. WILSON on several projects of mutual interest and benefit to our constituencies in southern Ohio, and southern Indiana, and I know that he is deserving of the fine tribute paid him on WLW's program.

Excerpts from that broadcast follow:

ANNOUNCER. The following is a special broadcast service presentation of the Nation's station. Each Sunday at this time WLW's world now presents this program, Personalities in Your Government, in order to bring the authentic background of prominent men and women who today are filling important positions with your national Government.

EARL WILSON, Member of Congress from Indiana.

Congress is many men. Some are tall, some are short, some are eloquent and some rarely make a formal, full dress speech; some are thin and some are fat, some are interested most in international affairs and others give all their effort to domestic problems. EARL WILSON, the man from Bedford, Ind., thinks that one of the best ways to be a good Member of Congress is to keep the folks back home informed as to what is happening in Congress and in Washington. WILSON has served the Ninth Indiana District for 15 consecutive years—now in his 16th year. He ranks among his colleagues in Congress as one of the most experienced and effective Members in the art of maintaining close and direct contacts with his people. People today are paying closer attention to issues in Congress; closer attention, in fact, than ever before. Proof of this can be found in the thousands of letters which the average Members of Congress receives every year. These letters from the people back home cover almost every conceivable subject.

A Congressman, if he is alert and experienced in serving his people, can accurately gage the sentiments of his constituents by a careful analysis of the mail. To Congressman EARL WILSON the daily mail is as

important to his work as the human pulse is to a doctor's diagnosis. To a visitor the mail on Congressman WILSON'S desk may only mean the expression of a few thoughts, ideas and complaints from a section of Indiana. To Congressman WILSON the mail throbs with the sentiments of the men and women he represents. That he profits from this hand on the peoples' pulse may be found in such testimonials as the one recently from the former Speaker of the House, Massachusetts' JOSEPH MARTIN. Said MARTIN, "EARL WILSON is ample proof of the fact that there is no substitute for experience. His lengthy tenure in Washington not only has equipped him to render quick and direct service to his constituency but it has given him a seniority and a parliamentary knowledge that makes him a valuable Member of Congress in behalf of the country at large."

Reviewing his work in Congress during 1955, Congressman WILSON says he is especially pleased with the progress that has been made in pushing the construction of the great Markland Dam project on the Ohio River. For many years an advocate of improvement of the Ohio, Mr. WILSON has steadily contended that this great river is destined to become the Rhur Valley of America.

As a high ranking member of the important House Appropriations Committee, Congressman WILSON was a key figure in 1955 in getting an appropriation of more than $2 million for start of the Markland project. Survey work and other preliminary projects now are under way and actual ground breaking is scheduled for early spring. "This Markland project, though authorized some years ago, was in a congressional log-jam that threatened to delay the work for another year or so," Mr. WILSON recalled. "It is fortunate and most encouraging that we were able to get it moving. Henceforth, if we keep pushing for the necessary appropriations, the job will progress rapidly and in a relatively short time the people of the Ohio Valley will see that great river transformed into one of the most important commercial arteries of the land."

Mr. WILSON'S many years as a Congressman—there are few who have been in Congress as long as he—have made him a master in the art of circumventing tedious and time-consuming official routines and redtape. During 1955 the people in his ninth district saw him single-handedly get a $30,000 appropriation for preliminary work aimed at constructing a long-needed reservoir on Salt Creek, a tributary of the White River.

An example of Mr. WILSON'S direct service to his people—and one, incidentally, which focused national attention on a little country graveyard down near Madison, Ind.—came last year when he learned that Maj. Samuel Woodfill, described by Gen. John J. Pershing as "the outstanding soldier of World War I," lay in an unmarked grave there in Jefferson County, Ind. Mr. WILSON went to the highest executives of the United States Army, and arrangements were immediately made to transfer the remains of this hero to Arlington National Cemetery. The reburial at Arlington included full military services attended by relatives of Major Woodfill, Secretary of the Army Wilber Brucker, and civic leaders of Madison. Later the people of that town erected a Woodfill monument in their courthouse yard. Though Congressman WILSON gives major attention to the wants of his folks back home and prides himself in the policy that, if necessary, everything else is sidetracked in order to expedite work in their behalf, he also is one of the hardest-working members of the Subcommittee on the District of Columbia and takes a leading part in deciding the spending policies of the city of Washington. The importance of committee work in the making of legislation in Congress is particularly well known to Mr. WILSON, as it is to other veterans of Capitol Hill. A typical congressional session will find him busy in committee hearings, rather than participating in inconsequential debates on the House floor. He makes it his business to stay informed of the issues coming up on the House floor and the extent of their progress. Thus he can leave his committee work when an important floor vote seems to merit it.

When we visited Mr. WILSON recently we found him sitting at a table in his outer office reading his morning mail, making notes on the margins for his replies which were to be dictated later on in the day. He regards this mail as the most important link between his office and the taxpayer back in his district. During 1955, Congressman WILSON has put added emphasis on the need of a stronger national education program. A former teacher and high-school principal himself, he declares that America's schools are her strongest weapon against communism and a number of his weekly newsletters for readers back home have dwelt on that topic. He is determined, he says, to do all in his power to raise the status and salary level of the teaching profession so that the finest and best qualified of young people seeking a lifetime profession will be attracted to teaching. He is indeed the teacher's friend, and he is so labeled by his colleagues. WILSON, himself, is rather unusual in politics. He isn't the type one thinks of as a "politician." He is quiet, serious, and not given to making speeches on the floor of the House merely to impress.

When he takes the floor it's because he has something to say and he says it simply clearly and forcibly. Actually WILSON had never been in active politics until he ran for Congress in 1940. Prior to that he had worked for other Republican candidates, but had never sought an elective office for himself. The amazing thing about his political career is that he jumped into politics as a Republican in a Democratic district. Even during the heavily Republican days of Harding, Coolidge, and Hoover, his district stayed Democratic. In 1932 the district went Democratic by a 20-thousand vote margin. Yet, 20 years later, in 1952, WILSON was carrying the district by 18 thousand votes as a Republican. In 1922, the Democratic candidate won 10 of the 15 counties; in 1952, WILSON won all the counties except Switzerland.

Hard work, perhaps, is one of the main contributing factors in WILSON'S successs. Hard work and a deep interest in the people and the problems of his district. "Most of my district is general farming," WILSON explains. "I try to know as much about the problems of the farmers and the others in the district as I possibly can." When it comes campaign time and other Members of Congress are making speeches dealing with world problems, WILSON is going about his district talking to as many people as he can. "I go to the stores, the garages, the filling stations, and any other place I may be able to talk to voters. If they have something bothering them I make a note of it and if it's something a congressional office can take care of, I'll try to get it done."

WILSON thinks that more and more people are becoming interested in politics, but there are still many more who should be showing an awareness in public service. After all, he sums up, politics is becoming a very important part of the lives of everyone. If we want to view it one way, a hard practical way, it affects the budget of every household. The income tax rate eats up a good share of a weekly paycheck and when something hits a person in the pocketbook they usually feel it. "The more active and interest more people take in their government, the better government we'll have."

WILSON is understandably proud of his own district. He points out that there are no pressure groups among his constituency. "I think that no other Member of Congress has a district where the people judge each issue on its merit. My people, after studying an issue, write me. They don't send in form letters prepared by some organization."

Actually, WILSON was born to politics. That is, if we hold to the tradition that our statesmen must come from log cabins. He was born in a log cabin in Huron, Lawrence County, Ind., in 1906. He lived on a farm during his early school years and after high school set out to earn enough money to pay his way through college. He worked for the Western Union Telegraph Co. as an electrician and as a brakeman on the New York Central and the Baltimore and Ohio Railroads. When he had $1,600 saved he entered the University of Indiana, completing his college work in 3 years. During his time in college he worked as an usher at football games, a cloakroom attendant at the library, tended furnaces during the winter and delivered the Indiana Daily Student in the early hours of the morning. Like every other successful man who has had to work his way through school, he now looks back on those days with no regret. He believes they were actually a part of his education.

Today he is married and has two children, Phillip Earl and Linda Sue. When Congress adjourns he'll be heading back to the 9th District, spending all his time visiting his 14 counties and meeting and talking to his constituents. "EARL WILSON," an oldtimer in Washington said recently, "is about the hardest working man in Congress—but he seems to love it." And EARL WILSON does—he loves every minute of it.

Divorcees Anonymous: The Organization Devoted to Rehabilitating Foundering Marriages

---

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. SHEEHAN. Mr. Speaker, I should like to pay tribute to a fellow Chicagoan—Attorney Samuel M. Starr. After many years as a practicing lawyer specializing in divorce and thus having the opportunity to observe firsthand the often inconsequential reasons therefor, he decided to attempt to establish a remedial organization with the idea of preventing unnecessary divorces and hence Divorcees Anonymous was born. As the result of his efforts toward the organization of this group, he has had national publicity through radio and television and articles have appeared in the American magazine, Reader's Digest, Catholic Digest, and Good Housekeeping magazine, in addition to many articles which have appeared in many of the metropolitan and country newspapers. Mr. Starr's long and varied experience has placed him in an excellent position to be of inestimable service in assisting people to cope with the many aspects of this serious social problem and his organization has thus spread throughout much of our Nation, with the resultant high praise of our social workers. Strictly unselfish, he has brought happiness to many lives which were seemingly hopelessly involved and his case history file is full of dramatic ex-

periences and solutions of marriage difficulties by sharing experiences.

Mr. Starr, himself, has been happily married for 20 years and is the father of 3 children.

I quote a portion of the material which appeared in the Reader's Digest:

Divorcees Anonymous charges no fees; anyone can have the members' unstinted help simply for the asking. From a nucleus of five determined young women, membership reached the hundred mark the first month and has been mushrooming ever since.

Each member operates in her own fashion and pays any expenses incurred. No one has ever refused instant response to a call, day or night. The DA's usually operate in teams of two. However, one woman may work alone or a dozen be called in to buttress an argument. Members whose own past experiences most nearly match the case at hand take over; a member whose marriage broke up over money troubles, for example, is best equipped to advise a couple quarreling over finances.

Where possible, the DA's get husband and wife together for a joint discussion of their differences. Often, simply bringing an emotional problem out into the light makes the whole thing look pretty silly to the combatants.

"You'd be surprised," one DA told me, "what trivial arguments are carried into court. Getting couples to talk things over sensibly will check many divorces before they start. But once a husband or wife actually begins proceedings, a barrier is raised between them that may never be broken down.

"When one mate refuses to cooperate, the DA's work on the other. They lean heavily on their own unhappy experiences and show how different their lives might have been if they could only have had the kind of counsel they are giving now."

The Choice for Neutralists

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. MAILLIARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial appearing in the San Francisco Call-Bulletin on July 9, 1956. As our Ambassador of Goodwill, Vice President NIXON has spoken firmly and accurately about America's role in Asia.

The editorial follows:

THE CHOICE FOR NEUTRALISTS

The more one reflects on Vice President NIXON's speech at Manila, the more it emerges as one of the most significant expositions of American policy in this cold-war era.

Scorning needless diplomatic pussyfooting or expediency, NIXON clearly sketched the benevolent nature of American relations with smaller, weaker nations and contrasted it with the brutal policy of duplicity and tyranny of Communist imperialism.

Speaking as the personal representative of President Eisenhower, NIXON, citing chapter and verse from current history, warned the Asian countries they were balancing on the edge of disaster by relying on a self-deluding policy of neutralism.

While understanding the Asian yearning to be uncommitted to alliances, he said there can be no excuse for failing to recognize the reality of what the free world and the Communist world each has to offer.

On the one hand, there stands the United States and its allies dedicated to the dignity of man and the basic rights of all men.

On the other, there is the certainty of force and terror plus a record of oppression unparalleled in history.

Hurling the lie into the teeth of Red spokesmen who are trying to represent our offers of help to the Asian countries as a form of imperialism, NIXON pointed to the example of the Philippine Republic.

The Philippines are free, he said. They are independent and equal in their relations with the United States. That is what it means, he said, "to walk side by side with the United States of America."

Then NIXON read, name by name, the tragic list of Russia's victims ranging from Latvia to Tibet.

This is the kind of forthright talk needed in the struggle against Russian efforts to poison our relations with uncommitted nations.

These are the hard, indisputable facts that cannot be argued away, or twisted and perverted by the Communist rewritting of truth and history.

The so-called neutralist nations cannot continue to work both sides of the street by accepting American dollars and resources and at the same time cozying up to the Communists.

It will be a good thing if the NIXON speech signalizes a reappraisal of our attitude toward the neutralists and serves notice that we expect them to take a hard look at what the score is.

Address by Attorney Joseph G. Tomascik, of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Attorney Joseph G. Tomascik, of Wilkes-Barre, on the occasion of the fifth annual SS. Cyril-Methodius Pilgrimage at Scranton on July 8, 1956, which was sponsored by the eastern district of the Slovak Catholic Federation of America:

Your Excellency, Bishop Hannan, Reverend Chairman, Right Reverend and Very Reverend Monsignori, Reverend Fathers, ladies and gentlemen, Pilgrims and friends, I have noted with interest what Father Polcha said about Slovakia and how one of the highlights of the week for Slovak people in the old country was to make a visit to the market place in the town square. Well, I have never been to Slovakia let alone to a Slovak market place, so that gives me cause to wonder why your committee invited me to deliver an address in the Slovak language. I am all the more amazed when I realize they could have selected one of the outstanding Slovak editors sitting at the press table in front of me. These men who are attending the annual convention of the Slovak Newspapermen's Association have a great many contacts with Slovakia and the Slovaks, and I'm sure they could speak to you in the Slovak language much more effectively than I. But on second thought, we do have something in common; they write the Slovak language newspapers and I read them. In fact, I believe I'm safe in saying that I'm probably the only fourth generation American who is a faithful subscriber and reader of Slovak language publications. In the folklore of advertising, that is considered a real "plug," and I hope that next year these editors send me free subscriptions, because buying so many newspapers does run into money.

But seriously, ladies and gentlemen, it is a great privilege for me to be asked to attend this banquet and to underscore in the mellifluous Slovak language the significance of this fifth annual SS. Cyril-Methodius Pilgrimage, sponsored by the Eastern District of the Slovak Catholic Federation of America.

I'm pleased to be here particularly because I come from Sacred Heart Parish in Wilkes-Barre where the first pastor was Rev. Joseph Murgas, that outstanding American-Slovak who was the organizer and first president of the organization sponsoring this pilgrimage. I'm proud to have been his altar boy as my father was before me, and I deem it an honor to pay tribute to his illustrious memory.

We in Wilkes-Barre and Luzerne County are proud indeed that the roots of the Slovak Catholic Federation of America were firmly planted by some of the outstanding Slovak pioneers in northeastern Pennsylvania. Father Murgas first organized the Federation in 1911 and Judge Seligman J. Strauss of the Luzerne County Court of Common Please approved the charter of your organization on December 30, 1912.

I took the trouble recently to look up the petition for incorporation of this society, and I find that the eight men who signed as the petitioners for incorporation were some of the outstanding Slovak leaders of a prior generation. Besides Father Murgas, who achieved international fame by his inventions in wireless telegraphy, there was Andrew V. Kozak one of the first Slovak undertakers in Wilkes-Barre and former president and treasurer of the First Catholic Slovak Union. Another signatory was Edmund Ujfallusy, a former deputy sheriff and interpreter of Luzerne County and founder of the Pennsylvania Slovak Union. The late Right Reverend Monsignor John S. Sobota, successor to Father Murgas at Sacred Heart Parish and former pastor of St. Joseph's Church, Nanticoke was also a petitioner, as was Michael Lapchak of Hazleton, former president of the Pennsylvania Slovak Union. Mr. Lapchak's tenure coincided with that of my late father, George Tomascik, who for 12 years served as president of the board of trustees of that organization. Another signatory was John Shigo, well known banker, industrialist and fraternalist from Freeland. Michael Vasil of Wilkes-Barre also signed the petition for incorporation as did Rev. Andrew Jurica, the sole survivor of this group, who was former pastor of St. John the Baptist Church, Pittston, and who last month celebrated the 50th anniversary of his ordination to the sacred priesthood.

These 8 men were the type of Slovak leaders in America more than 45 years ago who laid the foundation for the Slovak Catholic Federation, and they were among the prime movers for maintaining unsullied the magnificent Slovak record of accomplishment in the New World. To them and their colleagues must go the lion's share of the credit for enabling Catholic immigrants of Slovak extraction to evoke the favorable attention and notice of their fellow Americans.

It is significant indeed, that in this secular age when in public and private life the accent seems to be almost exclusively on materialism, more than 2,000 members of the Slovak Catholic Foundation have come long distance to attend this SS. Cyril-Methodius Pilgrimage at St. Anne's Monastery in Scranton. You have indicated that you know the value of spiritual exercises and your attendance at this pilgrimage testifies to your religious zeal. What a magnificent way to pay

tribute to the apostles of the Slovaks, SS. Cyril and Methodius. In fact, looking over this vast audience I am constrained to proclaim that you indeed are worthy successors of those intrepid saints and that you serve as remarkable prototypes of Cyril and Methodius in the United States of America. Just as Cyril and Methodius left their home in Thessalonica, Macedonia, and journeyed to the mountain homes along the Carpathian range to bring the word of God to your ancestors in old Slovakia, so you here in America, by participating in this pilgrimage, are the modern counterparts of these two intrepid apostles. America should be grateful that it has citizens of your stripe who in their private and public lives give such an appropriate consideration to matters of a spiritual nature.

Driving up to Scranton this afternoon with my good friend and prominent Slovak fraternalist, John J. Baloga, I was thinking about the motives that prompted the late Father Murgas and his colleagues to organize the Slovak Catholic Federation of America. The thought occurred to me that the prime motivating factor on the part of these early pioneers and Slovak leaders, was the realization of the importance of preserving the Catholic faith among Slovak immigrants in the United States. This idea was recently expressed very cogently by our Congressman from Luzerne County, the Honorable DANIEL J. FLOOD, who was the principal speaker at the 34th annual Slovak Day sponsored by the Slovaks of Wyoming Valley at Sans Souci Park last Wednesday, July 4.

Mr. FLOOD's address, I'm told, has been published in the CONGRESSIONAL RECORD under date of July 5 and it would be worth while for every American of Slovak blood to read it and renew his pride in the Slovak contributions to America. Mr. FLOOD stated in his address, that when Slovak immigrants disembarked at Ellis Island by the thousands in the period between 1860 and 1895, "it was not just chance that saw them endowed with solid potentials for American citizenship." "One quality they had in abundance," said Mr. FLOOD, "and that was faith." Mr. FLOOD continued: "Religion for them was not an isolated phenomenon; their devotion to God was an integral part of their lives and the more than 300 parishes in America founded by Slovaks and their descendants serve as eloquent testimony to a rich spiritual heritage."

What a neat and concise delineation of the prime attributes of Slovak character. And it is the preservation of this faith that moved Father Murgas and the founders of this federation to lay the ground work for an organization that was destined to develop and flower into one of the illustrious ornaments on the tree of Slovak life in America. These men knew that in the tradition of SS. Cyril and Methodius a man to be called a good Slovak had first of all to be a real Christian—his first consideration must be for the preservation and development of the faith. And your presence here, ladies and gentlemen, in such large numbers and from such diverse sections of this great country of ours, constitutes shining proof that the organizers of this federation builded on sound foundations nearly half a century ago.

The second motive that Father Murgas and his coworkers had in founding this federation, was the preservation of Slovak national consciousness in the New World. They knew that after faith, it was consonant with Slovak character to preserve an honorable pride in, and a just regard for, Slovak national traditions. They were not jingoists, these early pioneers; they were not rabble rousers intent only on obtaining advantages for themselves and their own people at the expense of other ethnic groups. Far from it. They were Christian gentlemen who sought to inculcate in their followers in America a love of the Slovak character and loyalty to a proud Slovakian heritage. Just as the Irish are proud of St. Patrick, the Welsh pay honor to St. David and the Poles venerate St. Stanislaus, so did your illustrious leaders encourage their followers to proclaim with pride their high regard for their patron saints, Cyril and Methodius. Father Murgas and his coworkers realized that America was composed of many national strains, races and ethnic groups, and they honored them all for their contributions to the saga that is America. But they were concerned too, that the fine and magnificent thread of Slovak history in the United States should constitute an important stand in the tapestry of the land of Columbus.

And speaking of America brings to mind the third reason that Father Murgas and his followers had in organizing the Slovak Catholic Federation. They wanted to shape its members into the highest types of American citizens. They knew that a Slovak who was religious was bound to be a good American, a lover of freedom and proclaimer of liberty. They knew that faith and freedom were inseparable partners, and they were determined that this splendid Slovak heritage should be focused sharply in the United States through the instrumentality of the Slovak Catholic Federation of America.

And so, my dear pilgrims, you may justly hold your heads high and in humble pride be aware of the splendid tradition of faith and liberty contributed by your ancestors on their arrival in the United States. They have set an example worthy of emulation, and I pray that all of you may continue in your personal and public lives to merit the bountiful harvest which they so prodigally and tenderly sowed.

Grand Canyon Air Tragedy Not Caused by Congestion in Airspace

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. ENGLE. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an editorial which will appear in the September issue of the monthly publication of the Aircraft Owners & Pilots Association, the AOPA Pilot. The Aircraft Owners & Pilots Association is the most active and effective organization speaking for the private, business, and pleasure pilot. This organization maintains a constant vigilance with respect to air safety and has tried to keep some semblance of good sense in the recommendations made by the special pleaders such as the Airline Pilots Association and the commercial airlines. Their comment, therefore, on the recent collision between the TWA and United airliners over Grand Canyon is especially meaningful.

This editorial clearly points out several things:

First, that there was no congestion in the airspace where this collision occurred.

Second, that the airline pilots and the airlines are trying to blame this wreck on the deficiencies of the air traffic control system, which they deliberately chose not to use, because these airplanes were not on a regular airway.

Third, that this collision did not result from the 2 airliners closing in on each other at 300 or 400 miles an hour, since both airliners were going in the same direction.

Fourth, that conceding that there can be improvement in the air traffic control system, this crash cannot be urged as very pertinent evidence in the case.

The editorial is as follows:

ANOTHER COLLISION

It has finally happened. Ironically, it has happened to two airline aircraft. Also ironically, the collision between that United Air Lines DC–7 and TWA Super Constellation happened under circumstances that has brought frowns to the faces of even the most pro-airline Government and congressional officials.

Unfortunately, it probably never will be known precisely what weather conditions were being flown in by each of these ill-fated airliners at the time of the collision. One or both might actually have been flying on instruments. One was known to be on an IFR flight plan, although the flight plan itself was meaningless, because the airplane was not on an airway or under the control of the air traffic control system. Or both might very well have been completely VFR, and just didn't see each other. In that miraculous collision between two airline convairs over Michigan City, Ind., in near-perfect weather not many months ago, by the greatest stroke of good luck both airplanes got down safely. And all four pilots involved testified they didn't see each other—although several passengers testified they saw the other plane in plenty of time to have avoided the collision.

This Grand Canyon tragedy, of course, is the worst to be expected from such circumstances. The chances are that, when the investigation has been completed, no one will every really know what actually happened. The best we'll have to go on will be educated guesses and deduction.

While AOPA has nothing but the greatest sympathy for all the dead and their families, and for the airlines involved themselves, we cannot sit idly by and ignore the irresponsible and grossly exaggerated public statements that hit the front pages within hours of the collision. Some of these came from Members of Congress who—unfortunately—were poorly informed.

But most came from the very people who know better—the airline pilots themselves. Spokesmen for the Air Line Pilots Association were quoted at length to the effect that this accident now proves beyond question that (1) airline pilots obviously no longer can be expected to look where they're going because the speeds of modern aircraft are so great, (2) that the amount of congestion has reached the critical stage, and (3) the air traffic control system, as they've been pointing out for so long, is so archaic, so decrepit that it somehow should have prevented this accident, but failed.

This kind of ax grinding, dishonest as it is, cannot go unanswered.

1. The facts indicate that both these airliners were going in the same general direction. Hence, "modern" as they were, their relative speeds were undoubtedly very low, and could hardly be used as an excuse for not looking where you're going.

2. If there ever was a part of the airspace that's uncongested, it's the airspace at 21,000 feet over the Grand Canyon. Frankly, this one baffled us too; AOPA had been waiting apprehensively for two airliners to tangle, but in some busy terminal area like Chicago, New York, or Los Angeles, where they tear around through space at excessive speeds, with the pilots frequently so busy inside the cockpit that nobody's looking out the windows.

3. While the air traffic control system is archaic, decrepit and whatever else the airline people want to brand it, the simple fact is that both these airliners over the Grand Canyon had deliberately chosen not to use the maximum safety of even that system, readily available to them. Both airliners were flying completely outside the control and jurisdiction of the ATC system—a fact the airline-pilot spokesman carefully chose to avoid. Backward as the ATC system may be, the fact is that it is precisely the system that is handling the world's heaviest volume of instrument traffic today, and doing it with a startling level of safety. It is this system that actually makes it possible for the very airlines that condemn it to survive and prosper.

And it is this very system that was working efficiently and available to both these airliners just a few miles to either side of their ill-fated course. Yet, the pilots of both airliners chose to fly outside that system, in uncontrolled airspace, and with no radio navigation aids on the course they chose to fly. Furthermore, one of these airliners apparently had been clearly warned of the presence of the other ship—and this warning was given by ATC controllers who did so only in an effort to be helpful, because they had no legal jurisdiction over those airliners flying off airways.

These unpleasant facts, then, would hardly seem to support the public statements of airline-pilot representatives. Nor do some others, about which AOPA has been concerned for years: Dangerously deficient cockpit visibility, an inexplicable lack of concern for a whole set of minimum safe standards of cockpit visibility drawn up by a group of airline and plane-manufacturing experts in 1952, but never adopted by the Civil Aeronautics Board (which also professes to be seriously concerned with the problem); the fact that the majority of airline aircraft cockpits in the air today do not even meet this minimum standard.

Nor can we ignore the fact that, only recently, the airlines' Washington representatives strongly opposed a CAB proposal to make flight recorders mandatory for public carrier aircraft. Such recorders, in these two airliners, probably would have "solved" this collision to a much greater degree than it can be solved.

AOPA feels the time has long passed for a careful, factual look at the causes behind near-misses and collisions involving airline aircraft. The causes of these hazards are well known. The action that should be taken is known; with a little guts we could get some prompt remedies. This is what it will take to solve these problems, not distorted irrelevant or untrue public statements.

Hon. Thurmond Chatham

SPEECH
OF
HON. WOODROW W. JONES
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 17, 1956

Mr. JONES of North Carolina. Mr. Chairman, I join with my colleagues of the House of Representatives in paying a tribute to the distinguished gentleman from North Carolina, Hon. THURMOND CHATHAM, who is leaving the Congress at the end of this session. He has without doubt, during his service here, established himself in the confidence and esteem of all the Members of this body. I regard him as an outstanding American who has rendered magnificent service to the people of our State and the Nation.

It has been a genuine pleasure to know Mr. CHATHAM personally and to have served with him in the Congress. As he retires to private life, I extend to him my very best wishes for continued happiness and success.

Bank Mergers

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. LATHAM. Mr. Speaker, I would like to set forth in the Appendix of the RECORD, for the benefit of my colleagues, a very able discussion of the problem of bank mergers by Mr. Arthur T. Roth.

Mr. Roth is president of the Franklin National Bank and an active civic leader of his community. He is a director of Long Island University, Abilities, Inc., which is a rehabilitation center for the handicapped, a director of the Mercy Hospital, Rockville Centre, and of the Long Island Rail Road.

The discussion by Mr. Roth follows:

FACTS BEHIND THE URGE TO MERGE

(By Arthur T. Roth)

How much government regulation should there be in banking? Who should do that regulating?

These 2 questions have been asked by 2 congressional committees and many lawyers, economists, bankers, and businessmen in the past few months. Let me discuss them in terms of a specific bank.

Banks are, I believe, as closely supervised by public authority as any other segment of regulated private enterprise. With this I have no quarrel because, as you well know, our banking institutions in large measure furnish the lifeblood of commerce and their operations, both nationally and locally, touch every community.

Being so closely supervised, however, banks fall outside of the sphere of the ordinary business corporation which has little or no government supervision. Thus it seems to me that agencies charged with the supervision of banks, with their long years of experience, are best able to cope with the problems which may arise concerning the banks, whether it be the matter of making loans or the matter of consolidations, rather than any other agency of the Federal Government.

The economic forces which are embraced within the banking sphere are of delicate adjustment and must be handled with the utmost care in order that they not become unbalanced. The banking agencies are the most unlikely, in the weighing of the principles governing the antitrust laws, to upset the balance in the economic picture.

Certainly, the application of the rigid percentage of the market rule developed by the courts and the Department of Justice as the test of illegality under section 3 of the Clayton Act, if applied by an agency not experienced in the field of banking, could well bring about results inconsistent with a sound and efficient banking system.

This percentage of the market rule, in my opinion, does not take into consideration the economic necessities which govern banking mergers. These include the consolidation of a weak bank with a strong bank to protect the depositors of a community; the consolidation of small banks in order to form an institution capable of meeting the banking demands of a rapidly expanding community; the consolidation of two small banks to meet the competition of a large third bank, etc.

In gaging these situations, the banking agencies with their far-flung network of examiners and supervisors and their experience are more able and more fully equipped to pass upon the consolidations of banks than would be the Department of Justice.

I certainly think that mere market share or percentage of the market in a purely quantitative sense cannot be reasonably said to be determinative of whether there should be a merger in the banking field. Any lessening of competition in the quantitative sense must, I submit, be weighed against (1) the increased effectiveness of the remaining competition, and (2) the strengthening of the banking system in the way of the diversification of services that are rendered to the public. If the latter two considerations outweigh the first, then the merger should be permitted. Whether these considerations in a given case would be controlling is within the particular competence of the banking agencies charged by law with the maintaining of an efficient banking system.

My conclusion on this point is supported by a staff report made to a subcommittee of the House Judiciary Committee in September of 1952. As a result of their study, they suggested remedial legislation which would place jurisdiction of mergers and consolidations of banks as well as the acquisition of the assets of one bank by another in the Federal agencies having jurisdiction over banks, that is, the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation. I think their conclusion is sound and that the policy underlying it should be adopted.

Any of the bills pending before the Judiciary Committee of the Senate on this subject, if enacted into law, could cause great danger in the case of an individual bank which might spread to others. I have in mind the consolidation of two banks, the depositors of the two banks becoming the depositors of one. Subsequently, some action by the Department of Justice, not understood by the average depositor, ultimately leads to rumors and a run on the bank and on other banks. We certainly do not wish to cause a repetition of any of the runs which occurred in the 1930's. In this connection, it must be remembered that banks are handling the money of depositors. They are not like the ordinary corporations which, in the last analysis, are principally involved with stockholders' interests.

I understand it is said that one of the chief evils resulting from bank mergers is that the larger banks resulting from mergers are not interested in making loans to small businessmen. The experience of my bank shows it was its mergers that in large part enabled it to furnish local financing to small businessmen in the rapidly expanding community that it serves.

I joined the Franklin National Bank in 1934. At that time Nassau County, in which my bank is located, was largely a farming or residential area of large estates and was known as the bedroom of New York. There was practically no industry. Nassau County was gradually growing and between 1940 and 1950 became the fastest growing of the larger counties of the Nation. It has continued to grow and now has a population of 1,100,000. Industry moved into the county or new industry started. As this tremendous growth took place, the demand for banking service also grew and the small banks were not equipped to meet the situation.

Franklin National Bank today is 61st in size, among the commercial banks of the

Nation. In comparison, it ranked 1,423 in 1939, 643 in 1947, and 200 in 1951. We now have deposits of almost $400 million, as compared with about $400,000 when I joined the bank in 1934. At that time we had 1 office in Franklin Square; today we have 20 offices, all in Nassau County, with 2 more expected soon.

We anticipated the demand for adequate banking facilities and partly through mergers attempted to meet the demands.

One of the demands was the borrowing requirements caused by the tremendous business and industrial growth, a growth in which small business played a significant part. By 1947 there were approximately 11,800 business firms in the county. In 1955 there were 25,000 business firms in the county—an increase of 111 percent. The great majority of these firms are small.

Most of all, a dynamic, growing bank provides the small-business man with working capital when he needs it. His money is not tied up in accounts receivable but is available for expansion or other business purposes when needed.

It is our policy that the officers of the merged banks remain as officers of Franklin, operating the branch offices, thus giving the community the benefit of their local experience. Their powers have been expanded enabling them to use a broader discretion than they have previously.

The facilities of the merged banks have been modernized and improved which, in turn, has caused many of the other banks competing with our branches to improve their banking methods and facilities. The result is that where prior to the merger there were several banks in a community operating in rather lackadaisical fashion, they are now actively competing for business.

Franklin's loans from 1950 to the end of 1955 increased 286.2 percent. This great growth in loans is due to the fact that many of the banks merged with it were limited as the amount of loans they could make because of their small capital and because of former managements' reluctance to enter actively into the loan field. A few specific instances illustrate the contrast between small bank and the combined bank credit extension situations. Whereas only three of the banks merged with Franklin National could, at the time of consolidation, have made loans in excess of $100,000—and none could loan $200,000—the combined organization now has outstanding many substantial loans of more than $100,000.

I do not think that the number of competing institutions is necessarily the only criterion for gaging the competition in a field. It is my firm belief that despite the drop in the actual number of banks which might be considered to be in competition in Nassau County, competition among banks within that county and with banks outside of the county has become much more keen and active, with consequent benefits to the residents of Nassau and surrounding counties.

I would further say that competition cannot be properly judged by considering only competition between banks. Franklin competes not only with three types of banks—giant commercial and savings banks in New York City, large commercial and savings banks on Long Island, and the small commercial banks on Long Island, but it also faces serious competition from savings and loan associations in and around Nassau County—with competition for savings accounts coming from as far as California. And we are also in competition with the large insurance companies and the many credit organizations that operate throughout the country.

From the foregoing, I can only conclude that Franklin's mergers have helped to strengthen competition in the banking field in Nassau County and have immeasurably benefited the community—especially the small-business man. I also conclude that the case of Franklin furnishes adequate proof of the proposition that mergers in the banking field should be left within the province of those bank regulatory agencies that, through long experience gained in the administration of their governing statutes, are best equipped to properly evaluate conditions under which mergers should be permitted in banking.

Certainly, on the basis of the recent history of banking in Nassau County, no argument can be made that a nonbanking agency should have jurisdiction over mergers of banks for the purpose of preserving sound competition.

The public interest in competition in the banking field, commensurate with a sound and efficient banking system, can adequately be protected by the bank regulatory agencies under appropriate statutory standards.

A Mission for Nixon

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. WEAVER. Mr. Speaker, may I call to the attention of my colleagues two fine editorials from the New York Times under date of June 24 and July 9, 1956, entitled "A Mission for NIXON," and "Our Taiwan Pledge Stands."

These comments confirm again that Vice President NIXON has the ability and prestige to act as the personal emissary of the President on missions of good will throughout the world. I commend them to you for reading:

[From the New York Times of June 24, 1956]

A MISSION FOR NIXON

Vice President NIXON has several times been called upon to undertake missions of what is called good will. The newest call is from the Philippines, and Mr. NIXON and his wife will go there to represent the United States at the July 4 celebrations of the 10th anniversary of the establishment of the independent Philippine Republic. This mission can be of great importance, and Americans will wish the Vice President the highest possible degree of success.

It must be confessed, with deep regret, that our relationships with the Philippines in recent months have been less satisfactory than we want them to be. Philippine President Ramon Magsaysay is a stanch friend of this country, and that very fact has helped to inspire a sort of anti-American campaign in Manila whose object, in part certainly, is to embarrass the President.

The United States has contributed to the discontent in the Philippines through the failure to take more prompt and decisive action on the matter of American bases in the archipelago, and also through the failure, in some congressional quarters, to understand some of the more sensitive aspects of the Philippine-American trade relationship. Recently there has also been the complaint voiced in Manila that the United States has neglected or bypassed the Philippines in its eagerness to aid or to woo some other Asian states such as Thailand, India, and Indonesia.

This last charge will not bear scrutiny when the entire Asian picture is put into focus. Our assistance has been large and will, we confidently hope, continue to be so.

But relatively minor irritants can have an unfortunate effect on the attitudes of peoples where there is inadequate intercommunication and possibly an inadequate basis of understanding. That seems to have been the case in respect to the Philippines.

It seems appropriate that the United States should be represented by its highest available public officer at this celebration. The Filipinos will be the first to appreciate the propriety of this international gesture, and it was wise and right to make it. From that vantage point Mr. NIXON has a chance to do a solid job in representing his country and contributing to the solution of vexatious problems. He should do it well.

[From the New York Times of July 9, 1956]

OUR TAIWAN PLEDGE STANDS

The high spot of Vice President NIXON'S visit to Taiwan was his delivery of a letter from President Eisenhower to President Chiang Kai-shek. The timing was good and the contents were right.

There has been loose talk lately about a "modified" or "more flexible" American position in respect to Red China. President Eisenhower made it plain that this cannot involve any violation of our pledge to support Free China. We are not underwriting any sort of adventuring in the Far East, but we will not betray our friends and allies.

This is significant, not only on Taiwan but elsewhere in Asia. The recent propaganda move of Red Chinese Foreign Minister Chou En-lai was more than a bland offer to Taiwan to surrender. All through it, directed at the overseas Chinese and at other Asians, was the suggestion that the United States was a worthless and faithless friend.

The Eisenhower letter is a direct answer to those implications. We have made our Formosan commitment and we propose to stand by it. In the limited sense this is part of our strategic defense planning in the western Pacific. It is also part of our commitment to human freedom. We do not propose to retreat on either front.

Mr. NIXON also made it plain at his Taiwan press conference that we are not bemused by a spate of Communist soft words from Moscow or Peiping. Deeds are what count and the deeds have not been forthcoming. There has been no Communist move to permit the free unification of the divided countries. There has been no halt to subversion and infiltration. Chou En-lai's own utterances represent an intensification, rather than an abatement, of the cold war against liberty.

If the people of Taiwan, who are doing a splendid job of building a free state, take heart and comfort from the President's words the message will have served an admirable purpose. And if other Asians are led to understand that we do not propose to make a compromise between what we consider to be right and wrong our own position will have been enhanced.

Mr. NIXON said the right things in Manila and Saigon. He did the right thing in Taiwan. His mission should redound to the honor of his country and to the cause of free men in Asia.

Polish Patriots Battle for Freedom

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Polish patriots in their zeal for free-

dom risk death. The Communist slaughter of Polish workmen at Poznan has fired the imagination of free people everywhere. It has hastened the day when Poland will again be free. Right must eventually prevail even though at this time it seems remote.

A just God rules the universe and right will conquor the evil forces of might.

Mr. Speaker, it is obvious to the whole world that the people of Poland are living under intolerable conditions. The Communist system which has been forcibly imposed on those gallant people is the result, as I see it, of the nefarious Yalta Agreement which sanctioned the division of the world and delivered Poland to Godless Communist Russia. The United States cannot shirk its responsibility for its part in that agreement. History is bound to indicate that our leaders who made our beloved country a part of the Yalta Pact failed dismally to protect the good name of our country and the unfortunate people who are now behind the Iron Curtain.

We have a moral duty to resort to diplomatic action in support of the Polish patriots to the end that they may live under a government which is based upon Christian principles.

Mr. Speaker, the Department of State has been slow to recognize the moral issue involved in the battle for freedom in Poland. The time has come for this Congress likewise to speak out in support of a people who demand their freedom.

Agricultural Chemicals Reduce Insect Damage to Crops

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HARRISON of Nebraska. Mr. Speaker, because of a recent infestation of grasshoppers in Nebraska, I am intensely interested in an article from the Wall Street Journal. From the beginning of time, man in his struggle for survival has been forced to fight the weather and insects. While there has been little he can do about the weather, he now has many new tools, in the form of agricultural chemicals, to combat his arch competitor for food supplies—insects.

Until recently, we have had hardly more than our hands to swat the mischievous mosquito or aggravating and germ-carrying housefly. For our crops we could only stand by helplessly as the armies of various insects rendered them unproductive or systematically devoured them acre by acre.

Dr. Leonard A. Scheele, United States Surgeon General, has stated:

> Some 5 million lives have been saved and 100 million illnesses prevented since 1942 in this country by the uses of insecticides.

While no similar statement has been made on a world basis, one can imagine the benefits which have been derived from the use of insecticides in public health.

In the agricultural field, where bugs had been taking a multibillion-dollar toll annually, new chemicals are now being used to control infestations and reduce the unit cost of production. The efficient farmer is finding these tools invaluable.

As you know, I am a member of the Agriculture Committee and represent a State which is predominantly dependent on agriculture. We have had testimony before the committee telling of infestations throughout the United States which are threatening some of our major crops.

In the July 17 issue of the Wall Street Journal, Mr. Robert Selleck has written an excellent, thought-provoking article about crop-destroying insects and what is being done to reduce the amount of damages caused by them.

Under permission to revise and extend my remarks in the Appendix, I want to include the article written by Mr. Selleck. I am sure this will be of interest to all of us who represent agricultural areas.

The article follows:

BUG BATTLE—INSECT ARMIES, SWOLLEN BY WET WEATHER, CHEW UP $4 BILLION OF CROPS—APHIDS, BORERS, GRASSHOPPERS INCREASE IN MANY STATES; INSECTICIDE MAKERS PROFIT—HITCHHIKING VIA BIG BOMBER

(By Robert Selleck)

It looks like a good year for bugs—not so good, perhaps, for man, the insects' arch competitor for food supplies.

Staccato slapping at mosquitoes is aggravating suburbanites from Long Island to Los Angeles. Dallas homeowners are plagued by a lawn-destroying grubworm. Considerably more serious are infestations of various kinds of insect pests that this year threaten crops and livestock in many parts of the country. Even if the bugs do no more than normal damage, their chewing, sucking, and biting will cause more than $4 billion damage by the end of the year. Chances are, though, this year's losses will be heavier than usual, partly because of the wet, cool weather in many parts of the Nation.

The bug battle isn't limited to any one section. Fruit and vegetable growers in Florida are fretting about the reappearance of the Mediterranean fruitfly for the first time in a quarter century. Grasshoppers are threatening fields in California, Texas, and Oklahoma. Boll weevils are crawling through some parts of the Cotton Belt in increasing numbers. And sugarcane and corn borers are attacking cane and corn in Louisiana, Illinois, and Iowa.

SEVEREST ATTACK IN YEARS

Final extent of this year's insect damage will depend on weather and the success of control measures. But Agriculture Department officials say signs during the spring and early summer indicate 1956 will see the severest attack by a variety of insects in recent years.

The man-bug relationship has been a close, generally unhappy, one throughout recorded history. Accounts of ravages by grasshoppers or locusts, biologically the same insect, are found in the Bible. The Old Testament book of Joel, for instance, gives a vivid description of a locust plague. "The land is as the Garden of Eden before them and behind them a desolate wilderness; yea, and nothing shall escape them." Bugs often have been grimly fascinating to man; many a science-fiction tale has been constructed on a theory that the insect kingdom might someday oust man from his dominant role on the globe.

Nobody knows, of course, how many insects there are in the world or how much damage they do. But were the bug population figures available, they would be staggering. University of Illinois surveys have turned up 65 million insects, on the average, per acre of forest soil in the State. The Department of Agriculture figures insect damage in the United States averages more than $4 billion a year, roughly divided between actual crop losses by farmers of $3.6 billion and control measure costs of $400 million.

Actually, nobody even knows precisely how many different kinds of insects are hopping, flying and crawling about in the world. More than 686,000 species have been described and named, but the classification work goes right on at the rate of 6,000 to 7,000 more insect species a year. In addition there are some 9,000 species of ticks and mites, which aren't true insects. (Spiders aren't true insects, either. They have eight legs; true insects have only six.)

HOUSEFLY GENERATIONS

Insects' tremendous reproductivity is one reason for the havoc they can cause. If all descendants of one pair of common houseflies lived and reproduced normally throughout one summer season, the total would be 191,000,000,000,000,000,000 flies. The cabbage aphid, averaging 41 young per female, has 16 generations between March 31 and October in New York State. If all lived, the descendants of one female aphid would total 1,560,000,000,000,000,000,000,000.

Entomologists estimate that some 10,000 species of insects in the United States do important enough damage, mostly to crops and gardens, to be called enemies of man. By this standard, many of the others are neutrals, although a good many are beneficial—by preying on other pests, helping pollinate plants and the like.

Main weapons in the constant battle against bugs are sprays or dusting compounds, parasites and breeding of plant strains more resistant to insect damage. Weather probably is man's biggest helper in keeping down insect populations because it affects their life cycles. Wet, cool weather generally boosts insect population—but not always—while hot, dry weather pares bug numbers.

But weather and insects' natural enemies—birds, other insects and some animals—would never keep bug populations in check, especially in agricultural areas. "Man's problem has been to find means of holding (insect) invasions in check," explains Dr. J. C. Gaines, extension entomologist at Texas A. & M. "Where natural controls are not able to do this, man must seek what might be properly termed emergency measures."

ONE MAN ENTHUSIASTIC

Controlling insects this year will mean brisk business for makers of agricultural chemicals and insecticides, about the only folks who benefit from bug ravages. In 1955, farmers bought $350 million of agricultural chemicals, 12 percent more than in 1954, says Lea S. Hitchner, executive secretary of the National Agricultural Chemicals Association. This is by no means the total spent on bug killers, as it does not include spending for such diverse things as insect repellants bought by fishermen and rose sprays used by backyard gardeners.

"Our sales are running at a terrific clip: last year's sales were up 25 percent over 1954 and this year promises to be even better," says C. M. Meadows, sales manager for Southwest Sprayer & Chemical Co. and one man who can get enthusiastic about insect hordes.

This should be one of the best years in history for the insecticide industry, adds A. C. Gunter, Dallas sales manager for Hercules Powder Co., which makes chemicals used by insecticide manufacturers. "Based on insect surveys for this year, I don't see how we can help but do well."

Even an insect infestation isn't an unmixed blessing for insecticide makers, if the bug happens to be a new one. Finding new chemicals, or perhaps adapting existing pesticides to new uses, is a costly, continuing problem for makers of bug killers. In addition, some bugs develop an immunity to insecticides used on them for several seasons.

The spotted alfalfa aphid now damaging crops in several States is a good example of a bug that popped up suddenly in this country. According to Agriculture Department officials, the aphid hitchhiked to the United States 2 years ago from the Mediterranean Sea aboard an Air Force bomber. It was first discovered in central New Mexico. Since then it has caused major damage to alfalfa crops in California, Utah, Texas, Oklahoma, and Kansas, with lesser infestations reported in Nebraska, Louisiana, and Missouri. At the latest check, the pest had skipped into Florida.

Oklahoma stands to lose half or more of this year's alfalfa crop because of the aphid. Cotton County, first in the State to detect the spotted pest last year, reports 100 percent destruction of a 10,000-acre alfalfa crop. Between 25 percent and 30 percent of the entire State's crop had to be plowed up this year, while another 25 percent has been damaged enough to affect the yield and life of the crop. Aphids attack alfalfa by sucking out the sap, thus killing lower leaves and damaging other foliage.

SMALL BUT HARDY

Aphids are tiny but hardy. They're smaller than a gnat and multiply rapidly in temperatures of 100° or more. They also can withstand temperatures as low as 5°. Many chemicals will kill aphids but only three—parathion, malathion, and dometon—can be applied to alfalfa that is to be used for feed, since other chemicals injure livestock. These insecticides are relatively expensive, costing from $2.20 to $3 an acre to spray.

This year, as at many times in the past, the familiar grasshopper is plaguing farmers. John C. White, Texas commissioner of agriculture, says State and Federal entomologists will supervise spraying of 4 million acres of land found heavily infested during a 'hopper egg count. Grasshopper damage totaled $31 million annually from 1925 to 1949 in the 23 Western States, estimates John Durkin, extension entomologist at New Mexico A. & M. College. Estimates of this year's probable damage run as high as $35 million.

Among the most spectacular examples of insect invasion in United States history were the migrating swarms of Rocky Mountain grasshoppers that blackened the Great Plains States in the 1870's. Witnesses said the hoppers left fields as bare as if they had been burned. Only holes in the ground showed where plants had been. Trees were stripped of leaves and the hungry insects even devoured green bark. One observer in Nebraska said one of the swarms averaged half a mile in height and was 100 miles wide and 300 miles long. It has been estimated that 124 billion hoppers were migrating in that one destructive swarm.

WEEVILS AND BORERS

In the corn and cotton country, farmers are battling ravenous weevils and borers. North Carolina, South Carolina, Georgia, and Louisiana report twice as many weevils attacking their cotton as last year, while several other States show smaller increases in the weevil population. Predicted damage figures for this year run as high as $300 million.

Boll weevils take a big bite out of the cotton crop every year. Damage totaled $245 million in 1954 and even more last year, according to the National Cotton Council in Memphis. In some years the loss has run as high as $700 million.

In the Midwest, corn borers are gnawing busily, and destructively, in waist-high corn. "The situation looks serious now, particularly in eastern Illinois," reports Dr. H. B. Petty, extension entomologist at the University of Illinois. "Corn borer damage this year may total $60 million, about the same as last year," he adds. "The borer population was large to start with this year," Dr. Petty explains. "And they've had good weather. The moths and the larvae (which actually do the damage) like calm, warm, moist weather, and they've had it so far."

A second generation of corn borers will emerge next fall, to attack mature corn. The only chemical weapon effective against the borers is DDT; hot, dry winds also are fatal to the larvae, but in many places such weather didn't come in time this summer, farm officials report.

FRUITFLY IN FLORIDA

In Florida, the reappearance of the dreaded Mediterranean fruitfly is tabbed "dangerous but not disastrous." Because the fly appeared late in the citrus season, Agriculture Department officials feel sure they can control the pest. The fly was discovered April 21 in a grove near Miami's International Airport. More recently, the fly turned up 170 miles away in the heart of the State's rich citrus fruit belt in Polk County.

Florida fruit growers also are worried about a burrowing nematode, a small worm that damages tree roots. Scientists are looking for a cure, but so far the only treatment is destroying infected trees, in hopes the worm won't spread.

In addition to the common sprays and dusts, bug battlers sometimes turn to biological controls—introducing harmless insects to prey on harmful ones. The ladybird beetle, for example, is the natural enemy of every spotted alfalfa aphid that crawls.

Recently some parasitic wasps, whose only hosts are the spotted aphids, were obtained from the Mediterranean region. The parasites are being tested to see if they will destroy aphids in this country. Three other species of parasite wasps are being bred at the University of California for aphid control and experiment are underway aimed at breeding a parasite called trichogramma that will help control the cane borer in Louisiana.

Wheel Club of Wilkes-Barre Performing Commendable Public Relations Job

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Record on Monday, July 16, which commends the Wheel Club of Wilkes-Barre for its outstanding promotion of the Giants' Despair Hill Climb as well as the Brynfan Tyddyn Road Race which will take place during a 3-day period this month:

The Wheel Club, in making possible a "bigger and better" annual Giants' Despair Hill Climb and Brynfan Tyddyn Road Race, is doing a commendable public relations job of importance for the community.

This is illustrated by the announcement that among "name" participants in this year's 3-day sportscar event, Thursday, Friday, and Saturday, will be two of America's foremost drivers. They are Jack McAfee, Manhattan Beach, Calif., and Carroll Shelby, of Texas. The two are coming here direct from California to drive cars of the "bombshell" variety entered by west coast industrialist John Edgar, Encino, Calif.

Entry of cars from the coast is noteworthy in itself. Of additional significance is the fact that Wilkes-Barre's annual sportscar attraction draws the favorable attention of industrialists. Year to year, names like Du Pont, Fageol, and others can be found on the entry list. As the hill climb and road races grow, even more can be expected to visit Wilkes-Barre.

As a major moral and financial supporter of the annual event, the Wheel Club, therefore, is to be congratulated. Membership in this booster organization is open to the general public, and is being welcomed. In addition to receiving a number of privileges in connection with the hill climb and races, members will have the satisfaction of knowing they are doing an important job for the community.

Huge GI Education Program Was a Sound and Solid Idea

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. VANIK. Mr. Speaker, the GI bill of rights which soon will expire has constituted one of the finest investments this Government has made to increase the productivity and the quality of its citizens. By reason of this legislation, millions of young men were permitted to receive an education which has undoubtedly qualified them for better positions and more useful citizenship. It is regrettable that this fine program should be coming to a close.

This Congress might very well consider the gap that will occur in educational training upon the completion of this GI bill of rights program. Are we sure that the private training program remaining will be adequate to do the task that lies ahead? Are we equipped to keep pace with the development of education and training in other parts of the world, particularly those in the Soviet orbit? With the struggle between communism and democracy now shifting to the educational front, are we certain that we can stay ahead?

Mr. Speaker, I commend the attention of the House to the editorial in the Cleveland Press of July 12, 1956, entitled "Huge GI Education Program Was a Sound and Solid Idea.":

HUGE GI EDUCATION PROGRAM WAS A SOUND AND SOLID IDEA

The largest educational program of its kind a government ever has undertaken expires this month. It is the GI bill of rights, under which nearly half the millions who served in the Armed Forces in World War II will have had some kind of schooling or on-the-job training at Government expense.

It has cost $14,500,000,000 all told. But the Government probably never spent that much to better advantage.

The benefits to the veterans are obvious. They have had training a large majority probably could not have got on their own. That training has enabled them to make a better living.

But the benefits to the Nation also have been important. The skills these veterans have learned have made them more productive, more useful citizens, at a time when their country has needed trained men more than ever before. And their skills will be contributing to the national economy for a long time to come; the average World War II veteran still is under 40.

There was some sentiment at war's end for large cash handouts. The movement for large-scale pensions arises periodically, as it did only recently. But neither of these methods of assistance to veterans could have helped either the veterans or the Nation anywhere near as much as has the GI bill, which was based on the eminently sound concept of helping people to help themselves.

The Success of Any Small-Business Enterprise Is Absolutely Dependent Upon the Vigorous Enforcement of the Antitrust Laws

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, there are about 4 million small-business men in our country today. They are the backbone of our economy. I was very interested, therefore, when I received a letter from George J. Burger, vice president, National Federation of Independent Business, questioning the accuracy of some of the arguments put forward in a booklet being distributed by the United States Chamber of Commerce. This booklet is titled "So You're Going Into Business." Mr. Burger says:

The part that interests us in the subject matters outlined in the booklet is the statement that the contributing reason for the failure of 8 out of 10 small businesses is the result of "lack of management know-how."

It doesn't make much difference how efficient small business may be, or how well financed they may be—if these (antitrust) laws are ignored, or there is weakness in the enforcement, it then means certain destruction to small business of this Nation.

I am going to include here for the information of my colleagues the letter by Mr. Burger because of the interesting comments he makes on the booklet being distributed by the chamber of commerce.

When one reads the publications of the United States Chamber of Commerce it becomes clear why the small-business men of the country have felt it necessary to establish a great organization like the National Federation of Independent Business to represent them nationally.

The letter follows:

NATIONAL FEDERATION
OF INDEPENDENT BUSINESS,
Washington, D. C., July 18, 1956.

Hon. FRANK THOMPSON, Jr.,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: Knowing of your sincere interest in the welfare of independent and small business, I noted with considerable interest the statement that appeared in the CONGRESSIONAL RECORD of July 17, Appendix, page A5581, that the United States Chamber of Commerce has distributed a booklet to all Members of the United States Senate titled, "So You're Going Into Business."

The part that interests us in the subject matters outlined in the booklet is the statement that the contributing eason for the failure of 8 out of 10 small businesses is the result of lack of management knowhow.

Those of us in small business—by that I mean actively owning and operating independent businesses—and then again, those of us who are accredited representatives of independent small business very often have heard the same comment made in opposition to legislation that would protect the business life of independent business—those who are already in their own businesses.

In reviewing the subject matters enumerated in the booklet I find little or no attention given to the principal and main subject matter that is most important for those already in business or for those who are going into their own businesses. I am referring to antitrust laws as to their enforcement, both at the national and local level.

I am calling to your attention a conference that I held with Dr. Arthur Burns, head of the President's Cabinet Committee on Small Business, and also, I understand, economic adviser to the President, as outlined in my letter which appeared in the CONGRESSIONAL RECORD July 6, 1956, Appendix, page A5309. I think it is well to note that part of the letter as it applies to the No. 1 subject—the heart of success or failure for small business, and particularly for those who are entering their own business:

"ANTITRUST

"We know from practical experience of owning and operating an independent business establishment that the key to success or failure of a small-business enterprise, whether at the production or distribution level, rests largely in the enforcement of these major laws to protect the free-enterprise system.

"We believe there is need for strengthening amendments to these laws, such as is proposed in the present Congress, which will curb deliberate and continual violations of antitrust laws. We find that fines are no deterrent.

"It doesn't make much difference how efficient small business may be, or how well financed they may be—if these laws are ignored, or there is weakness in the enforcement, it then means certain destruction to small business of this Nation.

"As a help also in this direction, the local United States Government attorneys should be utilized in detecting violations at the local level.

"To bring about impartial, sincere, and vigorous enforcement of the antitrust laws it is our belief that the Antitrust Division of the Department of Justice should receive increased appropriations, earmarked for antitrust enforcement. Through this competent personnel would be attracted, which would result in the department continuously being staffed with well-informed personnel having full knowledge of our economic situation.

"The procedure in the Federal Trade Commission should be reviewed, and the agency should confine itself to major economic cases or questions before the Commission, so that relief could be secured at the local level for small business through the free-enterprise system. This agency, too, should receive increased appropriations, which would attract competent personnel, resulting in the agency continuously being staffed with well-informed personnel having full knowledge of our economic situation."

The other subjects, in order, which were brought to the attention of Dr. Burns at the confefence were: the Congressional Small Business Committees, Small Business Administration, Taxes, Government in Business, Tariffs, Government Forms, and Labor.

In the booklet of the United States Chamber it states as a recommendation, item No. 3: "Buying. Goods well bought are half sold." Well, there can't be any argument on that. That is the reason why you and 392 other Members of the House recently voted for the needed amendment to the Robinson-Patman Act, which would bring about that condition that is recommended, so as to protect present small business and those going into business, to see that they get a fair and equal price from their supplier.

Another comment in the booklet is: "The successful merchant is the man who gives good value for the dollar and plays fair with everybody." We will go along with that 100 percent provided the supplier plays fair with all his customers, and not just a favored few.

I think it is most necessary that the correct information be conveyed and made a matter of public record in the way of guidance for those already in the business world, and more important—for those we are vitally interested in who may be going into their own business.

I trust that you can find it convenient to place this letter in the RECORD.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Culture and the Classics

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. DONOHUE. Mr. Speaker, I would like to include a very timely, and indeed challenging, editorial entitled "Habits of Study and the Classics," which appeared in the June 6, 1956, issue of the Worcester (Mass.) Evening Gazette.

This very interesting article graphically reminds us that true intellectual growth and depth is fostered by study of the old classics which is a wise lesson that could be profitably learned by modern students and inspired by our educational institutions.

This is a scientific age, but its productivity will be lost unless it is continuously governed and directed by a people endowed with and appreciative of the truth of Christian culture. All hail to Dr. Joslin.

The article follows:

HABITS OF STUDY AND THE CLASSICS

A fine old gentleman speaker at Leicester Junior College's commencement exercises the other day, had some things to say about studies and studying which today's students could profitably heed.

He is Dr. Elliott P. Joslin, of Boston, the noted diabetes specialist, who got his own diploma from Leicester Academy just 70 years ago.

In his student days, Dr. Joslin was taught the value of memory and habit in the learning process. Every weekend he reviewed all the Latin and Greek he had studied that week.

It wasn't enough either, merely to do each daily lesson. He found that another 15 minutes spent in reviewing it often resulted in raising his mark from a C to a B. He discovered, too, that giving just another 5 minutes to a lesson almost guaranteed a B or an A. So he used to make that time

under the flickering arc lights of the old Worcester Station on his way home to Oxford from Leicester.

Habits of study are important, of course, as today's students, surrounded by endless distractions, are discovering. But what you study is significant, too.

In this regard, Dr. Joslin was a student of the classics. He surprised his audience by quoting at length, from memory, passages of Cicero's famous Cataline oration.

Men like Dr. Joslin, who have made important contributions to society, are refreshing reminders of the importance of the classics. It is deplorable that today these studies have fallen into disfavor.

Ours is a scientific age. But what is science and what are scientists without the broadened intellectual horizons opened by a study of the classics? What will American culture be 50 or 100 years hence without the influence of classical studies, which foster affection for humanity, skill in the use of language, and more than passing appreciation of art, literature, philosophy, and government?

Airport Meanderings

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Evening Star, Thursday, July 12, 1956, concerning sorely needed airport facilities for the Nation's Capital. The article follows:

AIRPORT MEANDERINGS

The meanderings of the Commerce Department with respect to Washington's critical airport problems resemble those of a rudderless airplane whose pilot is lost in a fog. The record of the Department's varied airport recommendations in recent years shows an amazing amount of indecision, course changing, and acrobatics of the Immelmann turn sort. And the end is not yet. What the next policy decision of Secretary Weeks or his advisers will be is something to wonder about.

Latest of the Department's moves is a recommendation that Baltimore's Friendship Airport be designated as an interim supplemental Washington air terminal, pending action on the Burke project. Secretary Weeks keeps steering back to Friendship, despite all the expert testimony and reports rejecting the Baltimore field as unsuitable for Washington air passengers. It is no secret, of course, that Maryland legislators, worried about the lagging business at Friendship, have sought to twist the Secretary's arm. The trouble with Mr. Weeks' Friendship gestures, past and present, is that they apparently have been dictated by political pressures, not by objective advice from aviation authorities. In fact, the first official study by the Civil Aeronautics Board of the proposal that Friendship serve as an alternate Washington airport is just being made. The logical procedure for the Secretary to have followed would have been to await completion of the study. But logic seems to have played little part in departmental peregrinations.

Is there any logic in the confusing and conflicting airport suggestions that have emanated from the Department of Commerce since it first recommended the Burke Airport plan? When political pressures began to build up on both sides of the Potomac over the Burke site, with resultant cutting off of further appropriations, the Department began to back away from Burke. But as traffic congestion at the National Airport grew more dangerous, the Department's Civil Aeronautics Authority urged action on a second airport. So did the Senate Commerce Committee. So did President Eisenhower, in naming the Secretary of Commerce, the Budget Director, and the Secretary of the Air Force as a special committee to review the situation and bring him a report. The report was something of a classic in the realm of muddled advice. It proposed in effect that the Government do an outside loop on the Washington airport matter. The Government's nearly $1 million investment in land at Burke was to be forgotten and primary responsibility for building an auxiliary airport here was to be shifted to the District, Maryland, and Virginia. Meanwhile, runways and other facilities at the present airport would be improved and Friendship could be used as a supplemental airport if desired.

This report was so absurd that it soon was filed away and, presumably, its authors would prefer to have it forgotten. In the meantime the Senate Commerce Committee demanded prompt action on Burke or some other appropriate auxiliary airport. So Secretary Weeks came up with a new report. This time he revived an old plan for joint use of Andrews Air Force Base by commercial and military aircraft, with Burke as the best alternative and Friendship as a third possibility. However, he overlooked checking with the Air Force first about the Andrews proposal. Air Force opposition blasted the Andrews idea. That left Burke once more the leading contender. As a result, the President has urged Congress to appropriate $34.7 million to complete the airport at Burke. But political pressures are building up once more against this logical recommendation. It is anybody's guess whether political expediency will win out against public safety in the long-drawn-out airport controversy.

Hells Canyon Dam Vital To Farmers

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, as I have stated on a previous occasion, farmers in the Ninth Wisconsin District have more than ordinary interest in the development of the Hells Canyon Dam project on the Snake River.

The farmers in my area favor a federally owned high dam instead of the three low dams proposed by a private utility company. The reason for this interest in Hells Canyon Dam is very well expressed in part of a Farmers Union radio broadcast over 12 Wisconsin stations on July 9.

Following is the text of a news release on the Farmers Union radio broadcast pertaining to Hells Canyon Dam:

In the final weeks before the United States Congress adjourns, one of the major pieces of legislation which will come to a showdown is the long-sought measure to authorize Federal construction of a high multipurpose dam on the Hells Canyon in Idaho.

Last month, both the Senate Interior Committee and the House Interior Committee approved the Hells Canyon Dam measure which, if passed by both Houses and signed into law, would eventually put to use one of this country's last great untapped natural resources. This Hells Canyon fight has been going on for several years, and supporters of the legislation have run into one roadblock after another.

It was just a year ago in August, shortly after the 1955 session of Congress had adjourned, that the Federal Power Commission gave authority to the Idaho Power Co. to build three small dams on the Snake River of Idaho—dams which would completely blot out the great 1-mile deep Snake River chasm at the Hells Canyon. The utility is pushing construction of one of these dams so that if its license is canceled, either by Congress or by the courts, it can force the American taxpayers to pay the firm for its trouble, a throwback to the efforts of the Dixon-Yates combine 1 and 2 years ago.

The Farmers Union, the Farmers Union Central Exchange, the rural electric cooperatives and other co-ops have a vital interest in the Hells Canyon Dam. Wisconsin Farmers Union president, K. W. Hones, has sent letters to each of the 10 Wisconsin Congressmen and both Senators, urging them to support the Hells Canyon Dam legislation approved by the House and Senate Interior Committees. The Farmers Union president also urged the 400 Farmers Union locals in Wisconsin to write or wire the Congressmen and Senators asking their support of the Hells Canyon bill.

On July 9 Farmers Union president K. W. Hones made the following broadcast over the 12-station radio network:

"At this time I want to appeal to every member of a farm organization, whether he be Farmers Union or not, every manager of a farm-supply cooperative, and all interested farmers to write or wire the two Wisconsin Senators and the Congressman from their district to vote for the bill authorizing the construction of the Hells Canyon Dam.

"There is no more vital legislation than this bill. The development of the Hells Canyon Dam project is vital to Wisconsin because of the large deposits of phosphate rock in the area. This phosphate rock is of the highest quality, but only with cheap electricity comparable to that of the Tennessee Valley Dam can it be used to process these millions of tons of high-grade phosphate rock.

"Triple superphosphate is one of the important ingredients in commercial fertilizer and, besides that, superphosphate is needed on most Wisconsin farms in large quantities. It has been estimated that the current from the Hells Canyon can process this rock into triple phosphate and save Wisconsin farmers up to $6 a ton.

"The Hells Canyon is one of the last such sites left in the United States, and it is the only site anywhere near the rock deposits that is of sufficient size to furnish the enormous power needed for the furnaces.

"In the past some of our Wisconsin Senators and Congressmen have voted against this project, and the only chance of changing their minds is to hear from the folks at home. There is no time to lose. Both the House and Senate committees have reported the bill favorably, but according to reports a tough fight on the floor is expected. The Wisconsin congressional delegation could easily cast the deciding votes one way or the other as they have done so many times.

"Farmers, if you want fertilizer at lower costs, you now have a chance to swing into action. After the Idaho Power Co. develops this project with their proposed three small dams, the processing of this rock with cheap electricity is out of the question for good.

"So let's get our views in to our Representatives today without delay. We in the Farmers Union own these rich phosphate deposits. We need the finished product. We need the power. We need the Hells Canyon Dam, so let's get on the ball. You can bet that the Idaho Power Co. will spend a great sum of money to get votes against this bill, so let's get our boys set right."

Hon. Barry M. Goldwater, of Arizona

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted I would like to include in the RECORD for the attention of the House an article written by George Todt, a political columnist who was born and reared in Mesa, Ariz., my hometown in Arizona. In this column Mr. Todt discusses the distinguished junior Senator from Arizona:

I have previously quoted at length from a "political new look" address of Senator BARRY GOLDWATER entitled "The Fallacy of the Common Man." It is one of the most dynamic and constructive bits of American philosophy to emerge from our presently confused times; it ought to be read by everyone interested in preserving the traditional American way of life; it was placed in the CONGRESSIONAL RECORD of May 31, 1956, by Hon. BRUCE ALGER, of Texas, and may be found on page A4362.

But more than merely attacking the un-American concepts of socialism, pseudo-liberalism and the Marxian ideology of the politically corrupt New Deal—all bound up in the pitiful mass travesty of the "common man" we have so unthinkingly idolized in the past quarter of a century here in the United States—Senator GOLDWATER does more than this: He also points the constructive ideological pathway of our people for the future. In doing so, he looks intelligently forward instead of backward—but he employs some practical, down-to-earth wisdom in doing so. He takes the best thinking from good historical precedent and combines such correct thought with progress and old-fashioned liberalism which is diametrically opposed to Marxist collectivism of all descriptions.

Senator GOLDWATER is representative of a new, forward-looking type of thinking by younger men and women in the Nation which is commencing to take on a new look of boom proportions in our country today. This brilliant young solon could never, by any stretch of logic, be called a "reactionary" in the sense that he is old-fashioned or behind the times. On the contrary, he is the only jet fighter pilot in the Senate, and just as modern as the description implies. He is right up-to-the-minute in outlook, temperament, and philosophy. Why, then, does "traditional" Americanism appeal to successful young businessmen like BARRY GOLDWATER? The answer is not too complicated or sophisticated. It is simply that the pendulum is swinging back again in America—as the pendulum has a habit of doing in the course of time—and the younger, more advanced thinkers among our leaders are the quickest to perceive it. Youth, both on and off the campus today, is becoming more conservative with the passing of the days; there is a grass roots revulsion setting in—has been for some time—against the outworn political surrealism of impractical and corrupt Marxian Socialist plans of human coercion.

A new crop of youngsters is coming along with more wisdom than many of their immediate predecessors who bought the Marxist line, in whole or in part, because some nice old—or even young—strategically placed "plant" may have given them a bad steer somewhere along the line. These kids have more perspective and savvy in 1956 than, say, in 1946—when Old Nick of Moscow was our acknowledged "strange bedfellow" on the world stage—and certainly more than in 1936 when the entire country was in the throes of a moral toboggan ride which had sunk us as a people into the unaesthetic mire of the lowest kind of mental and spiritual stagnation.

Youth today is demanding intelligence and reason and demonstrable facts—and only scoffs at the outdated cliches which the Marxist planners have dangled as "come ons" before us for a quarter of a century from their intrenched New Deal sanctuary of collectivism for their nonexistent "common man." Youth wants brilliant and intelligent thinking for tomorrow and today, but wants it on-the-target and not wandering off into political quagmires and blind alleys. Youth desires bona fide intellectual realism and values, not phony utopias built on the theft complex of robbing Peter to pay Paul. This accounts for much of the appeal of Mr. GOLDWATER's level-headed approach with his "Uncommon Man."

S. 4146 and H. R. 12061

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which I made today in an appearance before the House Committee on Rules. I spoke in opposition to S. 4146 and H. R. 12061, bills authorizing the construction of a number of atomic reactors and authorizing the expenditure of $400 million in furtherance of the acceleration program. The statement follows:

Mr. Chairman, you are extremely kind to permit me to appear before this committee today. I realize the pressure of business in these closing days of the Congress is such that the Committee on Rules is especially hard put. It would certainly be understandable if requests such as mine were rejected in the interest of expedition. Yet, the chairman and other members of this committee are so cognizant of the importance of the bills pertaining to the atomic reactor program that you would not be satisfied to act upon it without having heard the testimony of each interested party.

I should like to preface my remarks with the explanation that I have from the start been an enthusiastic advocate of the plan to put the atom to work in every way that it is economically feasible and practical. I am convinced that the research and development work should be left to private industry wherever possible, but I have not opposed the program by which the Federal Government would participate in the construction of experimental reactors. I speak in opposition to S. 4146 and H. R. 12061 because, among other reasons, they would go far beyond this concept. They would order and direct the Atomic Energy Commission to carry out a program to which the Commission itself is opposed—a program for duplication of facilities that have not yet been given an opportunity to demonstrate their worth.

Mr. Chairman, the principles involved in these bills are highly confusing in that they appear to be entirely devoid of reason. It would appear that the Joint Committee on Atomic Energy, in its sincere and devoted effort to produce legislation of some sort before the 84th Congress becomes history, has created these bills in a desperate attempt to beat the clock at the 11th hour. The proposed legislation is entirely unnecessary. It would set up atomic generating facilities to compete with coal and other fossil fuels at AEC plants. Despite the fact that the Federal Government will absorb the cost of constructing and operating these facilities, they will still not be able to produce electricity nearly as economically as that which comes from steam plants using coal, oil, and gas. Thus, though there is no logical defense for the construction of these plants, they would nevertheless be put into operation as a losing proposition and at the same time threaten coal's markets—markets which provide for the very subsistence of many of the families in my congressional district.

Inasmuch as my district is the world's most productive bituminous coal region, Mr. Chairman, I could, in justice to my people, review in detail the importance of the electrical market to the coal industry. I shall not impose on your time, however, because I am certain that you understand the serious implications of this nature contained in these bills. Nor will I dwell upon the subject of atomic radiation and its effect on the health—mental and physical—of the human being. I am certain that you too were disturbed by the report of the National Academy of Sciences that emphasized the danger of exposure to these lethal rays and that you will take this factor into consideration in making your decision on this proposed legislation.

What I especially wish to point out to you at this time, Mr. Chairman, is that while it may appear to some advocates of this program that there will be no substantial harm in directing the AEC to put up reactors in these specified areas, so far as on-the-spot technical aspects are concerned, I submit that such a program would serve to accentuate the shortage of scientific and engineering manpower that already confronts us. You know the story. It persists in private plants and in Government laboratories. The Congress itself has time and again discussed means of alleviating the deficits in engineering manpower.

Admiral Radford referred to this important problem on April 18, 1956, when he appeared before a subcommittee of the House Appropriations Committee. He pointed up the shortage of scientific personnel for research and development work. The Chairman of the Joint Chiefs of Staff said these words:

"I have come to the conclusion that we are spending probably all the money in research and development that we can spend to advantage. We have reached a stage where the limitation in that field is probably a matter of competent scientific personnel available for that work.

"We can give a contract to a company for research and usually they will take it. Then we see ads in the paper where they try to hire trained men away from some other company that is producing on some other defense research program. There is a shortage. If we were to materially increase our efforts in this line I think we would cause trouble."

Could we now in conscience subscribe to a program which would require the services of thousands of trained technicians to be used in a project that is not necessary to our

military or peacetime survival? I think you will find that this is one of the major reasons for the AEC's objection to the proposed legislation. For that matter, you will find that some members of the Commission are quite fearful that, if this program should become law, it would be necessary to take personnel away from defense research and development projects in order that they may fill the positions that will, in effect, be set up by a mandate of Congress under these bills.

Mr. Chairman, I ask that you consider this point very seriously. I shall not take any more of your time. Again, let me thank you for this opportunity to appear in opposition to S. 4146 and H. R. 12061.

The Textile Industry Must Be Preserved for Our Own Security

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a most interesting and erudite article by Mr. Peter Edson concerning the unhappy situation confronting our domestic textile industry, which appeared in the July 11, 1956 issue of the Waltham (Mass.) News Tribune.

Mr. Edson presents a very clear picture of the difficulties, beyond its control, plaguing our industry, and to my mind graphically points up the fact that the only preserving solution is the sensible application of import quota restrictions on foreign textiles, which I hope may, soon be accomplished.

The article follows:

WASHINGTON, July 11.—Before August 1, United States Department of Agriculture hopes to come up with a new cotton export plan. It will include what amounts to a cotton subsidy or two-price plan.

Its purpose is to enable United States cotton textile manufacturers to compete on a more even basis in foreign markets with foreign-made textiles woven from American grown, surplus raw cotton.

How much this will cost the taxpayers and just how it is going to work nobody yet knows. The August 1 date is significant because that's the start of the 1956 cotton crop marketing year, and policies must be firmed up before then.

United States Department of Agriculture's Commodity Credit Corporation, now owns over 6 million bales of surplus cotton. It also holds another 6 million bales as security on loans to cotton farmers. Most of this loan cotton will eventually be taken over by the Government. The total is equal to a full year's cotton crop and the 1956 crop will soon start piling on top of that.

CCC is now required by law to sell surplus cotton on the export market by competitive bids, at not less than 25½ cents a pound. With the Government support price on cotton between 32 and 33 cents and the New York market price between 34 and 35 cents, this gives foreign mills an advantage of 7 to 9 cents on their raw material supply.

It is this differential, according to the United States textile industry, which enables foreign mills to undersell American cottons on world markets. Another factor is lower labor costs, which in Japan are only 10 percent of United States wages.

But what particularly annoys the American textile industry is that Japanese exporters have been underselling and increasing their textile sales right here in the United States of America.

One way to beat this is to lower the price on cotton going into United States-made textiles for export. This could be done by the subsidy or two-price system mentioned above.

There is no legal authority to impose a processing tax to finance these subsidies. They would have to be paid right out of the Treasury. The subsidy would not apply on textiles sold on the United States domestic market so it would not end Japanese competition in this country.

This brings up the other approach to the problem. It is to apply import quota restrictions on foreign textiles made from United States-grown cotton. This is what the United States textile industry really wants. Alabama and South Carolina have already passed laws restricting the sale of foreign textiles.

An attempt was made to amend the United States foreign-aid bill to the same effect. The idea was to limit imports from foreign countries receiving United States aid, if made from agricultural products in surplus supply in this country.

But here the United States State, Commerce, Tariff Commission, and other Government agencies objected. This was held a violation of trade agreements and treaties with friendly countries like Japan, whose economies the United States is trying to make self-supporting.

Recognizing the American problem, Japan has voluntarily limited its cotton textile exports to the United States to 1.5 percent of American production. This amounts to 150 million square yards of fabrics and 2.5 million dozen cotton blouses a year.

It is claimed these amounts will not cause serious disruption of the American market. Other goods in which there is competition include pillowslips, printed ginghams, and velveteens. Several hearings are now pending before the United States Tariff Commission for relief of American manufacturers under the reciprocal trade agreements escape clause.

United States cotton cloth production last year was 11 billion square yards. In foreign trade with all countries, United States exports were 542 million square yards and imports were about a fourth of that, 1,333 million square yards.

United States cotton textile exports were valued at $242 million and imports at $160 million. Raw cotton exports were valued at $469 million, of which $120 million worth went to Japan. The Tariff Commission says about a fifth of this cotton came back to the United States in the form of textile imports. That's what all the trouble is about.

United States Prison Roster Up 3,018

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following item which appeared in the Washington Post, Monday, July 16, 1956, which points up the need for additional Federal maximum security facilities. The article follows:

UNITED STATES PRISON ROSTER UP 3,018

The Nation's prison population grew by 3,018 las year, but a decline in the rate of increase was shown for the first time in 3 years.

A report issued yesterday by the Federal Bureau of Prisons showed 185,069 persons held in State and Federal penitentiaries on last December 31. Of this number, 2,020 were in the District's Lorton and Occoquan reformatories.

The nationwide total was 1.7 percent higher than for 1954, when the rate of increase was reported as 5.4 percent. The District's rate of increase last year was 5.5 percent from the total of 1,914 prisoners listed on December 31, 1954.

In addition to the District, 33 States showed increases in the prison populations ranging from 0.1 percent in Indiana to 17.2 percent in New Hampshire—the latter a State which reported a total of only 198 prisoners.

Regionally, the greatest rate of increase was shown in the State prisons serving the 11 Western States. The overall increase for that area was 3.1 percent. This included Montana, which had a prison population decrease of 21.5 percent.

The population of Federal prisons went up only 85 during the year compared with 2,933 in State prisons. The biggest prison was listed as the Southern Michigan State Prison at Jackson with 5,715 inmates.

For the country as a whole, the report said, there were 114 prisoners confined for each 100,000 of the civilian population. The range was 35.6 in North Dakota to 243.1 in the District of Columbia.

"The high rate for the District of Columbia can be partly attributed to the fact," says the report, "that the District includes the more densely populated central section of a large metropolitan area which extends into Maryland and Virginia."

The Maryland prison population last December 31 was reported as 4,930, a decrease of 5 percent, and Virginia's as 4,938, a decrease of 1.4 percent.

Editor's Absence Felt by Black River Falls

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to put in the CONGRESSIONAL RECORD the fine article by Richard S. Davis of the Milwaukee Journal staff on the recent retirement of my friend, Mrs. Harriet Noble as local editor of the Black River Falls Banner-Journal.

I have known Mrs. Noble ever since the first day I set foot in Black River Falls. It was to her desk that I was sent in March of 1941 to talk over the possibilities of finding a place to rent when I moved from Madison to Black River Falls.

Mrs. Noble was very close to my predecessor in Congress, Hon. Merlin Hull. While she never served on his staff in Washington, she was there on the home front, along with Henry Olson, now deceased, watching out for his interest.

I have always admired Mrs. Noble's fine philosophy of life and zest for living. Many of us in Congress could benefit from her ability to take things as they come and keep on an even keel.

Mrs. Noble will be missed by all the readers of the Banner-Journal. I can think of no better wish for her than that she will fully enjoy the retirement years ahead.

The article, "Editor's Absence Felt by Black River Falls," printed in the July 15 issue of the Milwaukee Journal, follows:

EDITOR'S ABSENCE FELT BY BLACK RIVER FALLS—MRS. HARRIET NOBLE RAN NEWSPAPER FOR 40 YEARS, AND NOW SHE HAS RETIRED

(By Richard S. Davis)

BLACK RIVER FALLS, WIS.—Even a brief visit reveals that this small city in Jackson County, indeed the county itself, has a hollow feeling in its middle. Harriet Thomas Noble has retired as local editor of the Banner-Journal.

It was 40 years ago that Mrs. Noble joined the staff of the paper owned by the late Congressman from the ninth district, Merlin Hull. There was a gap of about 8 years which she spent in China with her husband, James Bowen Noble, an architect and structural engineer, but all the rest of the time she was devoted to rural journalism.

Devoted is decidely the word for it. Strictly speaking, she was the only reporter, but she developed a system whereby all the town and sundry near-by villages were here assistants and the news came pouring in without her leaving the office. It was a nice trick, but it took a knowing head to do it.

MISSES THE EXCITEMENT

This reporter called on Mrs. Noble in her big white house on the hill two weeks after her retirement. She was still speaking of the newspaper office as thought it were her other home, still missing the turmoil of Wednesday, the publication day, and most of all feeling the lack of callers.

The gray haired newspaper woman with the patrician face has not been an editor in the usual sense. She has never admonished Banner-Journal readers on how to solve their civic problems or on how they ought to vote. She has never had a personal column in which to air her views. She has written veritable bales of copy, many thousands of words for each issue, but she has not sought to influence people, but only to win friends.

"The province of a paper like ours," Mrs. Noble told the visitor, "is to print the news of the community just as it occurs. The big city newspapers can have the earth shaking events, but we must tell of the marriages, the births and the deaths of the people we know. To me, the births have always been the most pleasant to report, but it has been fun to recount the marriages. As for the obituaries, I consider them extremely important, if only for the record."

EDITED AN INDIAN

Mrs. Noble did not say so, but it may be assumed that she had something to do with the paper's custom of sending each issue to the city's young men in military service, a practice that began in World War II. Hospital patients also get free copies every week and Mrs. Noble relates with a chuckle that "there isn't a single buzzer pushed for an hour after the papers come."

The late Charles Lowe Cloud, the famed journalist of Indian Mission, for years depended on Mrs. Noble to get his column into the paper. He would come rolling into the office, take a seat opposite the editor at her desk and compose the delightful items that stirred Statewide interest.

"All in all," Mrs. Noble commented, "I think that Lowe Cloud's most intriguing column was also his briefest. It was only this: 'No news this week, Indian report in jail.'"

The Nobles were married in 1919 and went immediately to China, where the architect represented a New York firm. They returned to Black River Falls after two years in Shanghai—it was then that they bought the Sam Landon home—but they went back to the Orient after a year and remained until 1927, whereupon Mrs. Noble rejoined the Banner-Journal.

Mrs. Noble has no great regard for Generalissimo Chiang Kai-shek, whom she considers just another Chinese war lord. He was in his ascendancy when she was in Shanghai and she learned a lot about him, but she says that she never trusted him. She declares that his chances of recapturing the Chinese mainland are, in her opinion, absolutely nil.

Three of the Noble children were born in China—Patricia, John and Jahala. The eldest, James, and the youngest, David, came along in America. Patricia, then Patricia Schofield, was killed in an accident in 1952. At the time she was, as her mother before her for a brief time, secretary to Congressman Hull.

Greek Refugees and the Immigration Act

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. DINGELL. Mr. Speaker, this great Republic stands for a large number of high ideals and as such it has been regarded as the best and perhaps the last refuge of freedom-loving, industrious, and enterprising people. In the past when there were few immigration restrictions, people flocked to this country and joined hands with native Americans in making this country a model, prosperous, and democratic commonwealth. America benefited by their industriousness, and they benefited by the freedom and the opportunities offered to them. It is no exaggeration to say that without the fine and lasting contribution of those immigrants to our civilization, we would be poorer in many ways today. We all readily admit that their share in the making of this country, as well as in the shaping of its destiny, has been immensely significant.

Fully conscious and duly appreciative of the fine qualities of the many immigrant elements in this country, I would like to say a few words in support of S. 3876 and S. 4088. As you are aware, there are a number of anomalies under the existing immigration laws. One of these is that while quotas allotted to countries of northwestern Europe remain unused, those for the Mediterranean countries, limited in numbers, are not. This is true even though the total number of quotas permitted under the McCarran-Walter Act of 1953 has not been filled. The purpose of these bills is to permit filling unused quotas with stated numbers of refugees of other nationalities.

I would like to give my unreserved and wholehearted support to these bills. Without increasing the total number of immigrants, they will provide an opportunity for a deserving number of people who will make good American citizens—many of whom will be joining relatives who are themselves American citizens.

Death of Federal School Aid Bill

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD I include an article entitled "Death of Federal School Aid Bill" appearing in the Evening Star under date of July 17, 1956, written by the eminent columnist and editor of the U. S. News & World Report, Mr. David Lawrence.

Mr. Lawrence is known for his accuracy, sincerity, and factual reporting. He is a passionate believer in the Constitution of the United States. His articles on the concept of State rights have made an invaluable contribution to the parliamentary thinking of this Nation.

In the enclosed article he deals with the reasons for the death of the so-called school aid bill. It is placed in the RECORD for the purpose of putting all Americans on record that an existing opinion of the Attorney General is extant and that regardless of the Powell or any other amendment, the President of the United States has issued an Executive order to the Interracial Commission which can vitiate any contract entered into by the Government of the United States and another party under the guise of racial discrimination.

In the days to come other school bills will be brought to the attention of the Congress. Let us not be hoodwinked with beatitudes and lots of wordy window dressings. So long as the opinion of the Attorney General is in force, any money from Washington can be stopped by the President of the United States under the guise of discrimination.

The article follows:

DEATH OF FEDERAL SCHOOL AID BILL—ACT BLAMED ON VIRTUAL FOUR-PARTY SYSTEM AND BLOC IS EXPECTED TO CONTINUE

(By David Lawrence)

Who killed the school bill with its billions of Federal money for education? That's still an unanswered question on Capitol Hill, where it may become known as the "mess of 1956."

It's too bad the "right to know" doctrine—espoused by the House committee which is seeking to rid official Washington of its tendency to suppress news—doesn't extend to the behind-the-scenes maneuvers of party leaders in Congress who pull the strings.

For the full story of what happened ought to be told. Four explanations are being offered. One is that the segregationists of the South killed the bill. The other is that the integrationists of the North did it. Another is that those who didn't want any Federal interference in the financing of the schools were influential in the result and that they were alarmed because of recent Supreme Court decisions whittling down States rights and increasing Federal authority.

But Senator HUMPHREY, Democrat of Minnesota, has a simpler explanation. He blames it all on "President Eisenhower's health or recuperation or concern over personal political problems" which are sup-

posed to have prevented him from "exerting some personal influence and leadership."

Eisenhower had already gone a long way in trying to get the bill passed. He had said once before that anything like the Powell amendment, denying Federal aid to schools in Southern States which do not adopt integration, shouldn't be tacked on to the bill. This was a daring expression on his part—a concession to expediency over and above principle.

But what did happen? Representative ADAM CLAYTON POWELL, Democrat, and one of the Negro leaders of the country, offered his amendment anyhow. It presented an issue which Republican Congressmen from districts where there are many Negro voters couldn't dodge. No amount of persuasion from Eisenhower could keep them from voting for the Powell amendment.

As for southern Congressmen, they abstained from voting so as to make sure the Powell amendment supporters would have a majority. They wanted the final measure to be unpalatable on every side.

But there are northern Republicans—about 65 of them—who don't believe in Federal control of education and they, too, voted for the Powell amendment because they knew it would help kill the bill. On final passage, they joined with the southern Democrats to make a majority against the entire bill.

Also important was the action of northern Democrats who helped to defeat amendments, proposed by Republicans, allocating the funds on the basis of the needs of the States. This principle previously had been endorsed, but the Democrats repudiated it. The final bill, therefore, was unsatisfactory to northern Republicans who favored Federal aid and southern Democrats who didn't, and thus was readily defeated.

It is a bit bewildering to see some of the so-called liberals ignoring what the southern Democrats did in helping the Powell amendment to pass or what the northern Democrats did in defeating the Republican amendments. And yet the defeat of the bill is characterized as a case of bad executive leadership.

The truth is there are four parties in Congress today. There hasn't been a 2-party system for 2 decades, and recent decision of the Supreme Court curtailing States rights mean that the 4-party bloc system will remain for many more years to come.

A significant aftermath of the school bill controversy is the discovery by southern Democrats of how near they come to being tricked by the argument that, if the measure were passed without the Powell amendment, they should have no objection to it. For the fact is that Federal funds could be withheld even without the Powell amendment or its counterpart. The administration has a legal opinion from the Department of Justice which is being used every day by the President's interracial commission. It claims the right of the Federal Government at any time to cancel any contract with any agency, public or private, which permits discrimination in employment on the basis of "race or creed, or color, or national origin."

The text of this important opinion has never been disclosed, though presumably the public has a right to know the exact contents of such an important document that supports an Executive order.

It's the knowledge that a threat exists to use Federal authority—even in the absence of a Powell amendment—to withhold funds from schools in the South which may prevent any school bill from ever being passed. It may lead to a demand for a specific stipulation in the law declaring that nothing in this or in any other law gives the Federal Government the right to withhold funds except for the reasons given in the measure itself.

What is surprising about the whole controversy is the assumption made by the liberals that those who voted for the Powell amendment should be reprimanded by President Eisenhower for voting their convictions. They are being upbraided for expressing themselves conscientiously. Because they are mostly Republicans, Eisenhower is being held responsible for their votes.

One wonders who is responsible for what the southern Democrats did and for the votes of those Democrats who don't want Federal interference in schools on any score. The theory that the Presidency is a sort of benevolent dictatorship and that the Congress must become a rubber stamp has lately become popular doctrine with many of the so-called liberals.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. BOW. Mr. Speaker, the defenders of the NATO Status of Forces Agreement and similar agreements repeatedly point to the reciprocal features of the agreements as justification for their term. They ignore the fact that without some measure of equality there can scarcely be complete reciprocity. This means equality in the number of men affected, equality of justice, equality in the facilities available for use and other physical assets.

I have pointed out before that we are not interested in having the right to try foreign servicemen in our courts. The only ones who consider this an advantage are those who picture a serviceman from another nation committing a terrible crime. Only three foreign servicemen have been subjected to any charges in our courts, whereas over 10,000 of our men have been accused in foreign courts. That number has been increased since last November when the count was made, but recent statistics are not yet available. We know that there are only a few thousand foreign servicemen affected by the agreements, whereas hundreds of thousands of Americans are deprived of important rights through the surrender of criminal jurisdiction to foreign nations.

Little attention has been paid to the failure of the reciprocal provisions in other respects, such as who furnishes offices, or pays for such offices and office supplies and equipment in NATO offices here and abroad, who is paying for the use of buildings, grounds, facilities, or services by our troops abroad, who is the prime target for claims of damage by civilians in foreign countries.

Under article IX of the NATO Status of Forces Agreement a member of a foreign force or a civilian component thereof, whose country did not have adequate medical or dental facilities here, would be entitled to receive medical and dental care, including hospitalization, comparable to that furnished to our own personnel and dependents. On June 19 of this year we passed a bill to indemnify M. Sgt. Harold LeRoy Allen for the cost of medical services and hospitalization amounting to $672.25 for his dependent daughter during her illness in Canada. Although Sergeant Allen had been assured by Canadian authorities at the time of the illness of his daughter that the services would involve no expense to him it was later determined that the Status of Forces Agreement did not relieve him of these charges. The Queens Regulations governing the Canadian Army provide that dependents shall not be provided medical care at public expense, and Canada was not obliged under the status agreement to give more to an American dependent than was given to a Canadian dependent. Of course a Canadian dependent would receive such service and hospitalization here without question.

The United States furnishes complete medical and hospital care for the dependents of servicemen stationed in numbers in foreign countries and, if dependents of servicemen are in need of medical care beyond the scope of the facilities, they are ordinarily returned to this country for treatment in a service hospital. If this were not the case, the failure of the agreement to carry out its claimed reciprocal features would be even more obvious.

Gen. Williston B. Palmer and Maj. Gen. E. L. Cummings

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, before this session closes, I believe the RECORD of the Congress should contain some recognition of the superior work of Gen. Williston B. Palmer, Vice Chief of Staff, United States Army, and Maj. Gen. E. L. Cummings, Chief of Ordnance, United States Army.

As a Member of Congress, and as a member of the Armed Services Committee and its Subcommittee for Special Investigations, I have had occasion to observe the manner in which these two officers have conducted Army business; and General Cummings that of the Ordnance Corps.

They have won for themselves and for the Army the confidence and the praise of my colleagues in the Congress. I would feel remiss in my duty if I did not publicly express to them the admiration which all of us have for them as devoted and efficient public administrators.

General Cummings, who has the strenuous and time-consuming job of Chief of Ordnance in our complex system of Ordnance Procurement, has done, in my opinion, an outstanding job. He is forthright, clear and courageous in his decisions. I compliment him, and the men with him, for the superior administration he is giving to the task committed to his care.

Mr. Speaker, in the past I have had occasion to inspect the type of work done by Army Ordnance. I have found its work of making ammunition excellent and most efficient. These leaders are doing a good job in producing our ammunition and I for one want to voice my own confidence in them and my appreciation of their abilities.

Nixon Leadership Followed When House Rejected U. N. Membership for Red China

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. HOSMER. Mr. Speaker, in passing the resolution today expressing the sense of Congress against U. N. membership for Red China the House followed the inspiring leadership of Vice President Nixon and President Eisenhower on this subject. A recent column by George Rothwell Brown recounts how the Vice President dealt with this matter during his recent trip around the world to assure many of our friends of the continued regard the United States holds for their friendship:

POLITICAL PARADE—NIXON SMACKS RED CHINA HOPES

(By George Rothwell Brown)

WASHINGTON, July 10.—Vice President RICHARD NIXON has again confounded his bitter critics in the opposition, and his lukewarm friends within his own party, by scoring another series of diplomatic successes on his latest dramatic flight around the world.

By far his most notable achievement, on this trip, and one with direct political effect upon the 1956 presidential campaign, scotches on the eve of the elections the persistent rumors that have been in circulation for months past, that in the Eisenhower second term Red China would be admitted to membership in the United Nations.

This is chiefly serving blunt notice on the British Government that the United States, so long as General Eisenhower is at the head of it, will not betray Nationalist China, by imitating the British example in giving recognition to the Peiping Government.

PLATFORM

Thus the statement the Vice President made after a long discussion in Taipei with Chiang Kai-shek clarifies the Chinese situation and foreshadows the adoption of a plank in the San Francisco platform pledging the Republican Party to resist the seating of Communist China in the U. N.

Senator KNOWLAND, of California, minority leader of the Senate, some time ago decided to sponsor such a plank in the 1956 platform of his party, and he was even hopeful that the Democratic Party in its national platform this year would take a similar stand.

Mr. NIXON'S blunt notice to Communist China—and to the British Government—may have greatly increased the probability of both the major political parties taking a strong stand this year on a position to which both parties are already committed in both branches of Congress.

UNDERCOVER

This should end, once for all, the insidious plot that has been long in the works, to throw Nationalist China out of the Security Council of the U. N., as soon as the American elections of 1956 were out of the way.

That Mr. NIXON spoke while in Formosa with the full knowledge and approval of the President is obvious.

His forthright statement means that the administration will not adopt the Dean Acheson policy enunciated by him when he permitted it to become known that the United States would not use its veto power in the Security Council, where Nationalist China also has that power.

It also means that this Government will not be a party to the pro-Communist scheme of transferring the question of the admission of Red China, as a substitute for Nationalist China, to the U. N. General Assembly, where that plan might be accomplished by a majority vote of the 60 member nations, under certain tricky interpretations of article 18 of the U. N. Charter.

DEMOCRATS, TOO?

The probability of the Republican National Convention at San Francisco backing up Vice President NIXON'S assurance that President Eisenhower is still firmly opposed to the recognition of Red China, and to giving it a seat in the U. N., poses a problem for the earlier Democratic National Convention platform builders at Chicago.

Civil Rights Legislation Aimed at States Rights

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. CRAMER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Tampa Times of July 14, 1956:

CIVIL RIGHTS LEGISLATION AIMED AT STATES RIGHTS

Southerners who are opposed to the civil-rights legislation sought by the Eisenhower administration may be defeated in their efforts to kill it, but they have some powerful arguments on their side.

The racial difficulties which plague the South, and other parts of the Nation, cannot be solved by Supreme Court edict. Particularly they cannot be solved by laws which abridge States rights.

A provision in currently sought legislation provides that the Attorney General would be permitted to bring suits in behalf of persons who contend their voting or other civil rights are abridged or threatened.

This would remove from the State the long-standing right to set qualifications for voting. It is conceivable that those States still requiring a poll tax could have this requirement challenged in suits charging that such a tax abridges the right to vote and the law could pave the way for action eliminating other basic voter registration requirements.

The requested legislation is vague concerning the definition of civil rights and would doubtlessly open the doors to investigation and suits intended to harass and annoy those Southern States which hold to traditions of long standing.

Here again, the question is not "racism," but the preservation of the basic rights of the States. The requested legislation is aimed principally at vesting more power in the bureaucracy in Washington. Mr. Eisenhower will not endear himself to the Southern States by insisting that Congress act positively on this request.

Our National Security

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. MULTER. Mr. Speaker, the following is a statement which I submitted to the House Post Office and Civil Service Committee today:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, 13TH DISTRICT, NEW YORK, BEFORE THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, JULY 18, 1956

Mr. Chairman and distinguished members of the committee, I appreciate your invitation to testify before you on this important subject concerning amendment of Public Law 733 of the 81st Congress, to protect the national security of our country.

I had originally intended to express my views in great detail and to indicate to you what I think is appropriate language for the amendment of this law. Because of the pressure attendant upon the closing days of the session, which I am sure has been as great upon other Members as it has been upon me, I haven't had the time.

I very earnestly urge upon this committee that it do not attempt to write any legislation for presentation to this session of the Congress at this time. The matter is far too important for hasty action. It requires extensive study and thorough deliberation.

On August 1, 1955, I introduced my bill, H. R. 7813, which is pending before this committee. You will observe that it calls for the establishment of a commission to review all cases which have arisen under the act in question. Since the introduction of that bill, the Association of the Bar of the City of New York appointed an impartial committee, made up of distinguished members of the bar of the entire country, to study this matter. They have made an exhaustive study and have issued a very lengthy report. A copy of that report has been sent to every Member of the Congress. Whether we agree with all or part thereof, I believe it is incumbent upon this committee to thoroughly study that report before it makes any determination as to what form any amendatory legislation should take.

On July 10, 1956, I placed in the Appendix of the CONGRESSIONAL RECORD, at page A5424, a statement from the New York Times which indicates the high caliber of the chairman of that committee. A copy is submitted herewith for your record.

On the same day, I placed in the Appendix of the CONGRESSIONAL RECORD, at pages A5426 to A5428, a summary of the committee's report as prepared and released by the committee. A copy of that summary is submitted herewith for your record.

The bar association's study and report probably makes unnecessary the study commission suggested by my bill, and can easily take the place thereof. This committee could well take that report as its starting point and make a complete study of the subject so that it will be able to present to the next Congress, in the early days thereof, appro-

priate legislation to cover this very important subject.

I am certain that every Member of this Congress has the best interests of our country at heart and wants to give it the utmost protection against its enemies from within and from without. I am just as certain that every last member of this committee, like every Member of the Congress, is determined that in securing our country against its enemies, we must not destroy the very liberties and freedoms that are so precious to us and that make our country both great and powerful.

I again thank you for the opportunity of presenting this brief statement to you.

Fifteenth Anniversary of the Commissioning of the United States Naval Air Station at Quonset Point, R. I.

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, July 19, 1956

Mr. GREEN. Mr. President, on Saturday, July 14, it was my privilege to be the principal speaker at the 15th anniversary of the commissioning of the United States Naval Air Station at Quonset Point, R. I. I ask unanimous consent to have printed in the RECORD the address I gave at these exercises, and also in this connection three form letters, first from Capt. B. E. Close, United States Navy, commanding officer at the Naval Air Station, Quonset Point, entitled "A Sincere Welcome to You," and second, from the executive officer at the Naval Air Station, Comdr. George M. Cunha, United States Navy, and third, from Jack A. Smith, president of the Civilian Welfare Association at the Naval Air Station, entitled "Welcome Neighbors" and dated July 14, 1956.

These letters, I believe, will be of interest to all who are interested in our naval establishments.

There being no objection, the address and form letters were ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR THEODORE FRANCIS GREEN AT THE 15TH ANNIVERSARY OF THE COMMISSIONING OF THE UNITED STATES NAVAL AIR STATION AT QUONSET POINT, RHODE ISLAND, JULY 14, 1956

Captain Close, officers and men of the Navy, employees of the Naval Air Station, honored guests, ladies and gentlemen, this 15th anniversary celebration of the establishment of the United States Naval Air Station here at Quonset Point, recalls vividly to me the ceremonies I attended in connection with the commissioning of this Northeastern Air Base in July 1941.

I am especially glad to be here again today as for these past 15 years it has been my privilege to be closely associated with the establishment and development of this base.

I remember well my talks with the late President Roosevelt relative to the original selection of this site, and later my sponsorship of the appropriation of $1 million for the purchase of additional land needed by the Navy for the base.

I also have in mind my conferences with the late President Roosevelt and Navy officials relative to the appropriation of sufficient funds to construct the base. Later I recall visiting this site when steam shovels, bulldozers, engineers, technicians and laborers were busy rushing the completion of the base so that the Northeastern part of our country would have an active Naval air facility in the event that some aggressor might declare war against us. It was not long before that declaration of war came and this great Naval Air Station was again expanded, and other Naval establishments, such as the Sea Bee Base at Davisville, were located in close proximity.

The 15 years have passed swiftly since the commissioning of this great Naval Air Station in 1941, and they have been filled with historical events.

Throughout the first 4 years our country was engaged in a war which threatened the very existence of all freedom loving nations. During that war the German submarine brought the fight to the shores of the United States. Many of you here today will recall how the Atlantic shores of our homeland, from Maine to Florida, were washed with the fuel oil of merchant ships sunk by German submarines in our coastal waters.

This United States Naval Air Station here at Quonset Point was a key base in that fight against the German submarine, for it was here that most of the patrols flown by aircraft over the North Atlantic shipping routes started. This air station provided all the required services for these flights—fuel, overhaul and repair, training of crews for the planes and for their overhaul and repair. Later on it served as a base for the hunter-killer aircraft carriers which proved to be the doom of the German submarine.

The years since World War II have been marked by significant changes. I remind you especially of the establishment and growth of collective security agreements among the free peoples of the world planning to preserve their independence and freedom. In these agreements, such as the charter of the United Nations and the charter of the North Atlantic Treaty Organization, our country has pledged assistance to more than 60 nations.

These collective security agreements look to the United States for leadership and support. The seas are the common highways which link us together. Across the world's oceans we extend our economic strength and political power to our allies today more than ever before. Our Navy is the tool which we depend upon to keep these highways free—it is the strength and mobility of our naval forces which give meaning and reality to these collective security agreements.

The United States depends on these ocean highways now more than ever before to reach sources of raw materials. Of the 77 strategic and critical materials which are needed for our defense production, 66 must be imported in whole or in part from across the oceans. In only 11 are we self-sufficient. Most of all, the tin, rubber, chromium, cobalt, mica and aluminum must be imported, and can only be brought to this country, in the quantities needed, by ships. It may be truly stated that our country cannot afford to lose control of the seas if we are to survive. Today the American Navy is more important than ever before—not only to us, but also to the whole civilized world.

It is significant to remember that the Nazis started World War II with only 57 submarines, but with this small starting force, they brought the war to our very coast line. Today the Russians have some 400 submarines, more than 7 times the number the Germans had at the start of World War II.

A second significant change which has come to pass during the past 15 years, involves the tremendous new advancements in our Armed Forces. For example, in our Navy, here at this haval air station, we have seen the transition from propeller-driven aircraft to supersonic jet aircraft. Fifteen years ago naval aviators trained at this base joined the fleet to fly the *Hellcat* and *Corsair* aircraft with a top speed of about 400 knots. Today in our fleet, aircraft such as the *Banshee* and *Cougar*, with the same mission, operate at supersonic speeds. The aircraft carriers *Forrestal* and *Saratoga*, which are capable of operating these new aircraft, are now an active part of the United States Fleet. Recently I took a short cruise on the *Forrestal* and went all over her from stem to stern, on all her decks, flying ashore from the flight deck while at sea. She has all the latest equipment and is most impressive.

The U. S. S. *Nautilus* has successfully introduced nuclear power into the fleet. This change from fuel oil to nuclear power was described as a historical first. It was at first compared in importance to the introduction of steam power, and later on to the change from coal to oil fuel. It has been truly revolutionary and is significant of the advanced science in our Navy.

The U. S. S. *Boston* and U. S. S. *Canberra* have joined the fleet as the world's first guided-missile cruisers. This change from bullets to missiles is another significant event that has taken place within recent years.

We have every reason to expect that the employment of nuclear power and guided missiles will develop tremendously during the next 15 years, and that these developments will require still further changes in the designs of ships, submarines, and aircraft.

The very existence of this new Navy, and the versatility and mobility it represents, greatly increases the chances for avoiding other wars, either small or large. Our enemies who would conquer the world are persuaded that they must first conquer the seas. Our Navy today is a strong deterrent force, which today protects the peace of the free world.

I am one of those who definitely believe that our country can best be protected if we have a strong Navy and Naval Air Force. So, I express my congratulations to the officers and men of this base and to the civilian workers who are employed here, and also congratulations to the mothers and fathers of the officers and men who have served here since the base was commissioned. Their records are those of achievement and efficiency and I, for one, believe that in the years to come this station will continue its expansion, will increase its activity, and will add to its prestige, not only as a great naval activity but also as an important industrial development in our State.

A SINCERE WELCOME TO YOU

On behalf of all Navy-civilian personnel at United States Naval Air Station, Quonset Point, I am pleased to have this opportunity of extending to you a most cordial welcome to participate with us in celebrating the 15th anniversary of the commissioning of this important link in the great chain of Atlantic coastal defenses. We, at Quonset, are proud of our station and of the progress that we have made over the past 15 years in the impressive advancement accomplished in naval aviation—our contribution to America's defense system through service to the fleet. It is our sincere wish that you may have a thoroughly enjoyable day with us. We will do all within our power to make you welcome.

B. E. CLOSE,
Captain, United States Navy, Commanding Officer.

As a native-born Rhode Islander, I am vitally interested in anything that is advantageous in promoting the welfare of the State. The creation and ever-continuing development of Quonset as one of the most important naval air stations in America have been instrumental in achieving this by providing jobs for many of my Rhode Island neighbors

and friends and in improving economic conditions in general. Naturally, as a native, I would like to have people see what we are doing here at Quonset, therefore I am happy that Captain Close is so cordially welcoming you to help us celebrate our 15th anniversary on Saturday, July 14, in this way observing at first hand our Navy-civilian team in action and enjoying a day as our guests.

GEORGE M. CUNHA,
Commander, United States Navy,
Executive Officer.

UNITED STATES NAVAL AIR STATION,
Quonset Point, R. I., July 14, 1956.

WELCOME NEIGHBORS: The Civilian Welfare Association is organized, as its name implies, to promote the welfare and recreation of all civilian employees of United States NAS, Quonset Point. The directors of this association comprise two delegates from each of the employee organizations officially recognized at Quonset. They elect their own officers, prepare bylaws, appoint committees, and supervise the work of those committees.

The assistance committee accomplishes its work with the utmost tact and many times has stepped in to assist Quonset workers in financial difficulties as a result of prolonged sickness, fire, or other disaster. It has available for free loan to station employees hospital beds, wheel chairs, and crutches. Through shop and unit representatives of the association, this committee maintains an active line of communication to all workers.

The recreation committee works with all departments and work units through the same representatives to provide recreational facilities and to support recreational activities on the station on an equitable basis for all employees. The blood donor committee maintains at Rhode Island Hospital, Providence, R. I., what is believed to be the largest blood bank account of any single work group, from which withdrawals may be made by any employee or member of his immediate family. In addition, for workers living outside of Rhode Island, the blood donor committee arranges direct donations as they are needed.

Other committees work to support these and other activities of the association and to carry on its affairs expeditiously and efficiently in the interest of all civilian workers.

The association's shared sponsorship of tonight's "Welcome Neighbors" dance at landplane hangar No. 1 is a sample of the association's efforts to provide all civilian employees of Quonset an evening of enjoyable recreation, an opportunity to meet each others' families and friends, and to celebrate with them this station's 15th anniversary of "Service to the Fleet."

To all of our guests we extend a most cordial welcome.

JACK A. SMITH,
President.

Cathedral of the Pines

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by Robert P. Allen, entitled "Cathedral of the Pines," which appeared in the Boston Sunday Globe. The story of the Cathedral of the Pines is truly inspirational, and I only wish that every American had the opportunity to visit the beautiful place of worship in New Hampshire.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CATHEDRAL OF THE PINES: "WHERE ALL PEOPLE MAY WORSHIP"

(By Robert P. Allen)

An advertisement of a farm for sale off Route 119 in Massachusetts captioned "A lot for a little" led to the creation of the world-famous Cathedral of the Pines in New Hampshire rather than in the Bay State.

Mr. and Mrs. Douglas Sloane founders of one of America's most unusual places of worship on a pine-shaded knoll 1,300 feet above sea level in Rindge, N. H., thought the words advertising the place near Ashby should have been transposed.

So the real estate agent with whom they were farm-hunting in the fall of 1937 talked them into seeing another place "just over the Massachusetts line in Rindge—and the price is right, too."

"It's only 11 miles from here," the real estate man told the Sloanes, "and only an hour and a half drive from your home in Newtonville."

Good salesmanship prevailed. The Sloanes drove on throughout the countryside where pines, spruce and hemlock contrasted with the fiery reds of the maples and the gold of the beeches and birch.

Magnificent vistas opened at almost every bend of the road. A glimpse of Mount Monadnock, up and down hills, then up the long climb into Rindge Center, circling around the old meeting house, off onto a dirt road which eventually skirted the shore of Grassy Pond.

Then up, up the big hill to "Interlaken," appropriately named because the property is almost circled by three ponds.

The Sloanes viewed the beautiful land and the buildings and knew in a moment this place would be theirs.

Early in the summer of 1938, the Sloane children—Douglas, Margaret, John, and Sanderson—were offered their choice of sections of the 128-acre farm on which they might at some time build a summer or permanent home.

Sandy chose the pine-dotted knoll "just inside the stone wall atop the 5-acre mowing piece" which overlooks the valley and lakes to Mount Monadnock miles away and the rolling Wachusett Divide.

"This," he said, "is the most beautiful view God ever put together. It's like being in a cathedral."

On the approximate spot where Sandy would have built his home is a boulder with a plaque bearing the inscription:

"Cathedral of the Pines. Dedicated to Almighty God as a place where all people may worship. In memory of Lt. Sanderson Sloane, killed in action over Germany, February 22, 1944. The gift of his parents Douglas and Sibyl Sanderson Sloane."

This is the memorial boulder of the Cathedral of the Pines—a spiritual haven where each in his own way pays tribute to all the country's war dead.

While he was in service, Sandy often expressed in letters to his parents the wish that "nothing on the knoll be touched" until he returned, because he wanted to do it.

And many times after he was reported missing in action after the B–17 he was piloting crashed, his parents visited Sandy's knoll.

After the first snowfall late in 1944, Mr. and Mrs. Sloane began clearing and burning the brush where the memorial boulder now stands with the plan to erect a modest memorial to their son.

But it soon became apparent that this was meant to be more than that. Friends of the Sloane family urged the creation of a memorial cathedral.

The clearing being sufficiently large by the middle of August 1945, it was decided to hold the first outdoor service there later that month.

The response by those present was such that immediate plans were made by the Sloanes to go ahead with the development of what is now the Cathedral of the Pines, to make the knoll available to all people for prayer and meditation, and to recall Sandy's sacrifice together with the war sacrifices of the sons and daughters of many other parents.

During the rest of that fall, all through the winter—many of the days the thermometer registered 20 degrees below zero with the wind zipping unchecked across from Monadnock—the job of clearing the grove went forward.

More than 300 dead or dying stumps of trees left standing after the 1938 hurricane had to be removed. The lower branches of all the pines cresting the knoll were dead and had to be removed.

Sawing, chopping, lugging, burning—each day saw some progress. By the time the frost was out of the ground the following spring, most of the crest of the knoll had been cleared.

First the Altar of the Nation was built, followed by the lectern, a memorial to the men on the bomber who died with Sandy. Then came the pulpit, the baptismal font and the Hilltop House, a retreat for visting clergymen.

Each structure was built of stones contributed from all over the world—many of them memorials to others who lost their lives, and many from famous people. There are bits of rock or soil from historic sites in every American State, and from virtually every country in the world.

The first sewice in the Cathedral of the Pines using the altar and pulpit was held July 4, 1946, and during the next 9 years, it received an estimated 1,500,000 visitors—many of whom came to pray, many of whom came just to visit. Upward of 10,000 have been there in a single day.

"Many who come to the Cathedral," explained Sandy's father, "are non-churchgoers who are troubled because they cannot finde real faith. For many of them, a few services at the Cathedral of the Pines are steppingstones to new religious inspiration.

And so it has been through the years.

Already known throughout the world, the Altar of the Nation, which not only recalls the sacrifices of all the American war dead but especially the Creator of those lives, may soon become a national shrine.

Bills to this effect have been introduced in Congress by New Hampshire legislators. The measures would not vest title to the property in the Government nor require Federal funds for upkeep of the shrine, but only to extend official recognition.

There's little doubt about it being worthy of such recognition.

The Situation on the Island of Cyprus

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an editorial which appeared in the July 5 issue of the British publication, the Man-

chester Guardian Weekly, with respect to the present situation on the island of Cyprus.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE BUNGLING

The Prime Minister seems to have bungled his Cyprus policy yet again. After making our flesh creep with the tale of how we shall all starve unless we have an airfield from which to bomb the Arab States if they cut our oil, he allowed it to be given out to the conservative press that a new solution was ready. It was to be announced last week when Sir John Harding got back to Cyprus. There was to be a liberal constitution devised by Lord Radcliffe and a time limit for its operation before the inhabitants were given the right of self-determination. Then the Turks got on the rampage. The Turkish Government, having muzzled its press, stifled its opposition, and, being in desperate economic straits, welcomed the opportunity of a foreign diversion. So it has been breathing fire and slaughter and asserting majority rights for its small minority in Cyprus. The chance of offering a decent democratic constitution with adequate safeguards for minorities has been blocked by Turkish intransigence. The British Government was relying on the political appeasement of the nonviolent Greek Cypriots now since, according to Sir John Harding, the terrorists are on the way to rapid extinction. Now it is back where it began and we are in a worse mess. Cypriot hopes are dashed and, with our well-known tact, we are making the people love us by collective fines on their towns. (The bulk of those on whom fines are being laid must be innocent, since the Government's case is that only a tiny handful approves of terrorism.) The Prime Minister, with his peculiar obstinacy, apparently refused to bring in the Americans and the other members of the North Atlantic Treaty Organization. He kept to the imperialist line. A wise Prime Minister would never have allowed himself to get in such an ignominious position. He would have tried the international approach and let the other members of NATO use their pressure on the Turks—and they are not without means—instead of giving the Turks the opening to use us for their own internal purposes. So confusion has become worse confounded. If Cyprus is, as the Prime Minister has admitted, an international problem, why not deal with it internationally? NATO cannot do worse than the British Government has done. But perhaps it is now too late.

The Steel Strike and the Public Interest

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Who Protects the Public Interest?" which was published in the Concord Daily Monitor, Concord, N. H., of July 16, 1956.

This excellent and thought-provoking editorial makes us aware that the public is the real loser in such a strike as the current steel strike. Everyone will suffer by this tragic lack of ability of management and labor to reach an amicable agreement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO PROTECTS THE PUBLIC INTEREST?

In the current steel strike there appears to be little real bitterness as between management and labor, probably because both have been doing pretty well, and no matter what the final terms of settlement are, each will likely do even better in the future.

What is not being determined is the relationship between those ultimate terms and the general economy. In short, are the terms to be justified by a proportionate increase in per capita production, or will the increases in pay and other benefits simply serve to jack up or inflate the American economy still further than it already has been inflated in recent years, which is about 100 percent.

In this instance both labor and management are well organized. There is no question of their not having observed minimum standards as to wages and hours which are established in law, or of their violation of the bargaining rules and regulations likewise imposed by law. However, the public interest may still be being ignored, for it is not represented in the negotiations for an agreement.

The agreement can become what in effect is a conspiracy against the public interest, with management and labor in the steel industry the conspirators rather than bona fide antagonists. For it is certain that if wages go up prices of steel will also go up, and there is no competitive way to prevent prices from rising, thus protecting the public interest.

What we have is an organized labor group willing to strike on the chance that it can distort the economy a little more than organized management in the steel industry feels should be done at this particular time. On the evidence, from the point of view of the public interest, what organized management has already offered organized labor in this instance goes beyond additional benefits to organized labor which have been earned by labor's increased production potential.

In a time of national emergency like war the public interest is protected by Government fixing of both wages and prices. Had such fixing not prevailed in the period of the last war this country probably would have come out of the war period with even greater inflation than has actually resulted. Now, with no war but with public spending for defense as great as they would be even though there was a minor war, the kind of brakes used in wartime are not being applied.

The ramifications of what is done in an industry so basic as steel should be readily apparent to all. An inflationary trend in fixing steel wages and prices will be reflected in similar inflationary actions across the whole American economy, this time as in each similar instance before.

Much the same situation exists in other major American industries.

Extension of Federal Production and Marketing Controls to Fruits and Vegetables for Processing

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. HICKENLOOPER. Mr. President, I have received a letter of protest concerning Senate bill 2933 which deals with Federal production and marketing controls of fruits and vegetables for processing. The protest is from the Iowa-Nebraska Canners' Association, and I ask unanimous consent that the statement from that association, entitled "The Fallacies of Extending Federal Production and Marketing Controls to Fruits and Vegetables for Processing," be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE FALLACIES OF EXTENDING FEDERAL PRODUCTION AND MARKETING CONTROLS TO FRUITS AND VEGETABLES FOR PROCESSING

Off and on during the past 20 years a few farm organization spokesmen and a few officials of the United States Department of Agriculture have advocated the extension of the order sections of the Federal Agricultural Marketing Agreement Act to all fruits and vegetables for processing. They suggest that the mandatory production and marketing controls authorized in that statute might be successfully used to stabilize or contribute to the orderly marketing of processed fruit or vegetable commodities.

The processing industries, canners and freezers, have vigorously opposed these efforts because they know that the controls provided for in the marketing law were not designed for crops for processing or adapted to canned or frozen fruits or vegetables. Processors also know that the proposed controls would adversely affect the growers of these commodities. The controls could take away the grower's freedom of choice in making up production schedules, limit his activities to historical patterns, and ultimately price his product off of grocers' shelves.

Canners and freezers likewise know that unnecessary production and marketing controls adversely affect consumers by increasing the price of processed fruits and vegetables and by limiting the selection of quality, grade, size, and variety. Most important, the complete absence of any need is a compelling reason for opposing artificial and arbitrary production and marketing controls over canned and frozen fruits and vegetables. The fact is that farmers and canners and freezers have worked out their economic salvation without the necessity for Federal Government intervention.

Vegetable growers and vegetable processors utilize the contract acreage method of securing the highest degree of market stability or orderly marketing without any outside counseling. Neither party becomes a captive and both maintain the opportunity to profit through enterprise, and efficiency.

Natural economic laws are constantly at work to assure fruit growers and fruit processors a better living for each. Fruits that are processed fall into two categories: Those that are now grown solely for the processing market and those that are grown for the fresh as well as the processing market. In each of these situations, the canner pays the grower for the raw product at the time of delivery. The grower receives cash in hand for his product. The canner carries the processing investment and risk and marketing responsibility.

But specifically where the fruit has its sole outlet in processed form, canner competition for the fruit has assured the grower an ever-increasing market, with a consequent increase in orchards and groves.

Where the fruit has a market both fresh and in processed form, the grower has profited from dual competition. Here, the increase in orchards and groves and cranberry bogs has been phenomenal. This growth proves the profit of the enterprise.

Finally, the total fallacy of Federal marketing orders controls is found within the law itself. Whether you are a grower, a canner, or freezer, study the attached out-

line of what the law would authorize if it were amended to apply to any or all processed fruits and vegetables. This indicates what a marketing order could do—to your growers, to you, and to your customers.

WHAT A MARKETING ORDER CAN DO

1. Control the quantity, quality, grade, size, source of every canner's raw material obtained from each grower. Since this must be done on a historical basis, new processors are curbed from entry.

2. Limit the total production nationally, by region, by area, by canner of each canned item on any basis administratively determined.

3. Allocate available raw material and production between canning, freezing, drying, fresh market outlets.

4. Do each of the above on a day-to-day, week-to-week, month-to-month, seasonal basis.

5. Provide for determination of surpluses, disposition of surplus, establishment of reserve pools for any canned product, and assess canners alone for costs of maintaining them.

6. Require inspection and install an inspection system.

7. Regulate cannery practices in the procurement of raw material, including, e. g., handling of crop receipts, field boxes, operation of vining stations, etc.

8. Limit the amount and size and grade of the canned product that may be shipped to each consumer market.

9. Regulate every phase of canning and marketing the canned product that may be administratively called an unfair trade practice.

10. Provide for market research, market development, advertising for any canned product, at canner costs alone.

11. Assess canners alone for the cost of administration, inspection systems, market research and promotion, surplus pools. Such collections do not go into United States Treasury, but are directly spent.

12. Apply all of the above controls and authority directly to the canned product.

Compulsory marketing orders can be put into operation over canner objection, that they are not needed, unworkable, and extremely costly.

The Reactor Rush

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Reactor Rush," published in the Memphis (Tenn.) Commercial Appeal, concerning the program of atomic power reactor construction.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REACTOR RUSH

By a 49-to-40 vote the Senate has moved to launch a hurry-up program of atomic power reactor construction. The $400 million plan, sponsored by Tennessee Senator ALBERT GORE, still faces action in the House, where some Representatives have demanded a more exact comparison with Russian development than is now available.

The Gore bill was pushed with the contention that the American electrical industry is lagging in the use of atomic reactors while other nations—the Soviet Union, for example—are advancing smartly.

The bill would direct the Atomic Energy Commission to build five power reactors at or near AEC installations. This would provide electricity for atomic plants—easing TVA obligations in some cases—and at the same time advance technical knowledge as to how nuclear energy can best produce electricity.

There is a natural reluctance by private power to smile upon any possible intrusion by the Government that might mean competition.

In the specific field of electric power, nine reactors with a proposed total output of 1,112,500 kilowatts are actually scheduled for construction by private utilities. The Gore bill calls for three plants with 100,000-kilowatt output each and 2 in the 10,000 to 20,000-kilowatt range.

Listing of numerical strength is misleading. A utility group sponsored a recent nationwide advertisement stating that 90 reactors were now built or planned in the United States. Many of the utility firms have since repudiated the ad as incorrect and confusing. The same promotional material indicated a program of 30 reactors for Great Britain, 17 for Russia and 24 in the rest of the world.

Some private power leaders feel this suggests a race to produce kilowatts rather than an effort to stay ahead in reactor technology. It was also pointed out, in the wake of the appearance of the advertisement, that Britain's two operating reactors are primarily plutonium producers, with electricity as a byproduct, and that the 5,000-kilowatt French unit requires 8,000 kilowatts of outside power to run cooling fans.

The Gore bill seems to meet the demand for technological emphasis, and placement of Government reactors in the vicinity of AEC plants does not appear to be a competitive wedge.

The proposed power reactors would serve as a testing ground for both Government atomic development and private utilities. The Nation would not take the chance of letting its reactor research be retarded, and industry and taxpayer alike would be assured that future electrical needs could be met.

Hurricane Damage to North Carolina

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Brig. Gen. Edward F. Griffin, State director of Civil Defense and Natural Disaster Coordinator for the State of North Carolina, delivered before the 43d national convention of the National Rivers and Harbors Congress, at the Mayflower Hotel, in Washington, D. C., on May 12, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY BRIG. GEN. EDWARD F. GRIFFIN, STATE DIRECTOR OF CIVIL DEFENSE AND NATURAL DISASTER COORDINATOR FOR THE STATE OF NORTH CAROLINA, BEFORE THE 43D NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MAY 12, 1956

Mr. President, distinguished guests, members of the National Rivers and Harbors Congress, ladies and gentlemen, I am most grateful for this opportunity of appearing before you in order that I may bring you some of the gloomy picture of eastern North Carolina today which has been painted by the powerful and devastating hands of the hurricanes which visited us during 1954 and 1955.

Our troubles began along the coastal areas when Carol and Edna passed near our shores in August 1954, creating unusually high tides and damaging wave action, cutting away many of our natural sand dunes and protective structures. On October 15, which was soon after Carol and Edna, Hazel struck us and left her calling card of death and destruction; and then during August and September of last year Connie, Diane, and Ione found their way to our shores and inland, causing us the loss of many lives and a great property damage.

The entire economy of eastern North Carolina has suffered a devastating and staggering blow as a result of these hurricanes. Practically every farming and business operation in the eastern part of our State has been retarded and adversely affected. These storms have been so severe that it has been conservatively estimated by our engineers that we have lost from 15 to 60 feet of our entire coastal area adjacent to the Atlantic Ocean.

The great damage which we sustained as a result of Hurricane Hazel was caused by the terrifically high winds, and the accompanying high water. Luckily, we did not suffer a great crop damage as a result of this storm for most of our crops in the area had been harvested and sold. Farm property, however, suffered a tremendous impact and loss. We had more than 25,000 farm homes and buildings destroyed and damaged at a loss of more than $50 million. Our standing timbers in the area were given a terrific pounding by the winds, and we suffered a loss thereby in blown down and uprooted trees something more than $3 million. The hundreds of tributaries leading into our navigable waters were clogged, and dammed by the thousands of fallen trees and debris. The many district canals and ditches were likewise clogged and rendered useless by the fallen trees and debris. Our farmers have exhausted their means and resources in an effort to drain their farmlands, but are unable to clear out the tributaries and headwaters which are so vital in the drainage of the surrounding farmlands.

The condition just described has created a tremendous health hazard in that ideal breeding grounds for all types of mosquitoes now exist in the large areas of stagnant water pent up by the clogged canals, ditches, and streams. Local health officials and the State health department have been struggling for many months, with inadequate manpower and materials, attempting to eradicate these millions of disease-carrying pests. Their task can never be accomplished unless they are furnished greater financial aid than has so far been provided for drainage and stream clearance. We have done our best, but the resources of the localities and of our State have simply not been great enough to provide what is necessary.

To give some idea of the great and destructive force of Hurricane Hazel, we had 19 persons killed, approximately 4,000 urban homes destroyed, and 1,000 commercial and industrial buildings demolished. In fact, we had one little community which was completely wiped out. Before the storm there were 357 buildings in the town and after the storm, there were only 5 buildings which remained on their foundations. The total property damage as a result of Hurricane Hazel amounted to more than $125 million.

When Connie, Diane, and Ione arrived during August and September of last year, the storm area was still staggering under the blows of Hazel. The torrential rains, which fell throughout the area, in one instance measuring 15.25 inches in a 24-hour period, together with the terrifically high winds and pressures which pushed the waters inland

out of our sounds, flooded approximately 2,650 square miles, or 26 percent of the total land area of the 22 coastal counties. I am advised by engineers and other experts that this situation was greatly aggravated due to the clogged conditions of our headwaters and streams which were left in dire need of clearing as a result of Hurricane Hazel.

Some of our richest and most productive farmlands are located in the area which the storms embraced. Many of these productive farms were served by drainage districts. These suffered untold damages from debris being deposited in the canals and ditches—these drainage systems being the lifeline of our agriculture in many of the storm stricken eastern counties.

In 12 of our counties, we have had 45,328 acres of our croplands covered with salt water, which renders the land useless from 2 to 3 years. In 31 of our counties, we have had 86,590 of our acres of cropland covered with fresh water.

One of our eastern towns which was 35 or 40 miles from the ocean had more than 40 blocks completely inundated from high water for several days, which cost untold damage to private and public property.

The damages which we sustained as a result of the three 1955 hurricanes was in excess of more than $193 million. Agriculture suffered the great bulk of the loss from the storms, amounting to $131 million. One-third of North Carolina's population consists of farmers and farm families, and we have more individual farms than any State except Texas. A blow of such serious proportions to agriculture upsets the economy of our entire State.

If we are to save, from the ravages of hurricanes, some of our finest farmlands situated in our coastal counties, it is essential that we construct the necessary levees along our rivers and waterways to prevent the rising waters incident to a hurricane and torrential rains accompanying them from again flooding these lands. We are also faced with the problem of keeping open, free of debris, and operational our many drainage canals and ditches so that the waters may have an escape way to our sounds and the ocean.

There are many of our eastern towns and communities which are in dire need of permanent-type breakwaters and bulkheads—such structures would have saved in the past four storms many millions of dollars in property damage.

Unfortunately, the insurance coverage in the storm area was very small and inadequate when compared to the tremendous losses sustained. Our farmers and all manner of businesses, including our commercial fishing industries, private properties, public properties, and facilities owned by the various municipalities and counties. All suffered severe and staggering damages.

Under the provisions of Public Law 875, the President of the United States has declared our hurricane area a major disaster area and has allocated to the Federal Civil Defense Administrator the sum of $4 million to be used for debris clearance, health measures, and the temporary restoration of essential publicly owned facilities. This has helped us a great deal in the rehabilitation of the public facilities in our towns but is most inadequate in making the necessary permanent repairs that are required if we are to protect public property in the area.

The great protective bulwark for eastern North Carolina against the ravages of the Atlantic Ocean are our outer banks. They should and must be protected if we are to guarantee the safety of many of our coastal counties and communities. Along these outer banks lies the birthplace of the first English child in America, the historic site of the first airplane flight in America, and the Hatteras Lighthouse, which is vital to navigation on the Atlantic Ocean, as well as the National Seashore Park and some of the finest beaches and beach communities to be found anywhere in America.

Along our Outer Banks we have had many new inlets to be formed turning the saline ocean waters directly into our sounds. This creates a threat of great magnitude to our commercial fishing industry. Unfortunately, a vast part of our Outer Banks are uninhabited and according to the interpretation of Public Law 875 by the Federal Civil Defense Administration, those uninhabited threatened areas are not eligible for rehabilitation operations out of Federal funds under said law.

With more than 300 miles of shore line to be stabilized against hurricanes, the other ravages of nature, and the Atlantic Ocean, our State is faced with a problem of great magnitude and cost. Our State is not blessed with the rock ribbed coast line found in many States; and, in my opinion, if we are to save what we have left, it will be essential that we construct without delay the necessary breakwaters, groins, jetties, and seawalls.

There is one further point I would like to make while here today, and that is that North Carolina as a State has, and will continue, to make every effort to help take care of our disaster needs with our own resources. For instance, our State agencies, such as the highway department, agriculture department, etc., have expended considerable amounts from their normal budgets for administrative purposes in connection with these disasters. The Council of State authorized the expenditure of $27,000 for study known as North Caroline hurricane rehabilitation project. We have created a new office in our State government called the director of hurricane rehabilitation. This director is given the full-time job of doing everything possible through the planning and installation of protective devices to minimize the damages we may receive from any future hurricanes.

In short, the State of North Carolina is doing all it can to meet its own needs through its own efforts. This we will continue to do, but we need your assistance. It is imperative that we have relief or we will be faced with possibly disastrous consequences.

There are many projects which are needed if we are to preserve our great coastal area, and I plead with you this morning to assist us in having them investigated by the Corps of Engineers:

1. Groins to prevent further erosion of beaches and to preserve the Outer Banks, estimated cost—$11,865,000.
2. Reconstruction of destroyed sand dunes and sand fences, estimated cost—$1,580,000.
3. Drainage of agricultural lands, estimated cost—$5,386,000.
4. Breakwater to prevent inundation of Belhaven waterfront, estimated cost—$333,000.
5. Fort Fisher erosion.
6. Southport yacht basin enlargement and shrimp boat harbor.
7. Southport waterfront retaining bulkhead.

There are pending, which have been authorized for investigation by the Corps of Engineers, some 21 projects which are vital to our rehabilitation program. Unfortunately, these projects have not been investigated due to the fact that the Corps of Engineers has not received the necessary appropriation. It is our hope that this convention will go on record requesting the Congress to make funds available for these necessary authorized projects for investigation. All of these projects are most meritorious and should be constructed at an early date.

Funds for four of our essential projects have been included in budget recommendations for the fiscal year 1956–57. We hope that you will help us in obtaining this appropriation which is vital to our rehabilitation program.

We have approximately 20 projects which have been approved but still lack the funds for construction or completion. All of these are most worthy and we sincerely request that you assist us in obtaining the necessary appropriations.

In order that you may be fully advised as to the damages which we have sustained in North Carolina as a result of these four hurricanes, which have visited us within the past 18 months, I am attaching hereto an itemized statement which are the figures we arrived at based on surveys of local authorities and officials, local civil defense directors, engineers from our office, reports from the American Red Cross, reports from the United States Department of Agriculture, reports from the Federal Housing and Home Administration and from personal surveys and observations. We feel that they are reasonably accurate and can give you some idea as to the staggering blow delivered to the economy of eastern North Carolina, during the past 18 months.

Storm damage to State as a whole, hurricane Hazel, Oct. 15, 1954

Estimated damages to public highways, public utilities, State and municipally owned property	$10,000,000
ESTIMATED DAMAGE TO PRIVATE PROPERTY	
4,000 dwelling houses completely destroyed or suffering major damage, estimate at $7,500 average	$30,000,000
20,000 dwelling houses sustaining minor damage estimated at $1,000 average	20,000,000
10,000 farm buildings completely destroyed or suffering major damage estimated at $4,000	40,000,000
15,000 farm buildings sustaining minor damage estimated at $700 average	10,500,000
1,000 business buildings completely destroyed or sustaining major damage estimated at $5,000 average	5,000,000
4,000 business buildings and personal property sustaining minor damage estimated at $1,000	4,000,000
Estimated damage sustained by church, church property, private colleges, and schools	1,000,000
Estimated damage to standing timber	3,000,000
Total estimated damage in North Carolina	123,500,000
ESTIMATED DAMAGES SUSTAINED IN NORTH CAROLINA AS A RESULT OF HURRICANES CONNIE, DIANE, AND IONE	
Public utilities	$2,000,000
North Carolina State-owned property	500,000
North Carolina State highways and bridges	1,500,000
Farm crops and other agricultural losses	106,629,248
Cost of mosquito-control program	500,000
Services and contributions to disaster area by State departments	565,982
Private property damage other than agricultural	49,520,000
Damage to public property of counties, cities, and towns	7,839,000
Total damage in North Carolina	[1] 169,054,730

[1] The above figures were arrived at soon after the storms and according to our best available information. Based on the research in preparing for the North Carolina

hurricane rehabilitation project, the damages for the 1955 hurricanes now exceed $193 million. Of this amount it has been determined that the agricultural losses amount to $131 million.

Freedom Crusade

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. ADDONIZIO. Mr. Speaker, I am pleased to call attention to the vigorous campaign being conducted in the archdiocese of Newark, under the leadership of the Right Reverend Monsignor Cornelius J. Boyle, in behalf of the American citizens held in prison in Red China. This Freedom Crusade was initiated by the Reverend Harold W. Rigney, S. V. D., who was released from prison September 16, 1955, after 4 years and 2 months of confinement.

Messrs. Allen C. Bradley, of the Advocate, the official publication of the archdiocese of Newark, and Edward Cuffe, who served in China with the State Department, are cochairman of the archdiocesan crusade. Under their able direction, splendid progress has already been made. The campaign is now in high gear, as is indicated in the following article in the Advocate of July 14, 1956. I commend this noble cause to all my colleagues in the Congress.

ACCM To Sponsor Freedom Crusade To Free Americans

Newark.—Eleven American citizens are still held in prison by the Red Chinese and their plight has been noted by the Archdiocesan Council of Catholic Men as a matter of major concern and action.

At an executive board meeting July 9 at the Chancery Office the NCCM unit unanimously voted to adopt the Freedom Crusade inaugurated recently by Rev. Harold W. Rigney, S. V. D., himself released after serving 4 years and 2 months of a 10-year prison term imposed on him by the Reds.

The July 9 meeting was attended by 35 representatives of various Catholic men's organizations including the 4 county presidents of the ACCM. Appointed cochairman of the archdiocesan crusade to free the imprisoned Americans were Allen C. Bradley and Edward Cuffe, former member of the United States State Department who served in China.

Rt. Rev. Msgr. Cornelius J. Boyle archdiocesan director, urged the men to carry the message back to their various organizations and to ask their spiritual directors to back the Freedom Crusade.

"It is possible," he said, "that we could get a half-million letters going to Mao Tse-Tung from Bergen, Essex, Hudson, and Union Counties."

The plan as outlined by Monsignor Boyle will go into effect immediately. Each county will handle its own phase of the crusade with the county president as director. They in turn will report to the archdiocesan directors of the crusade.

As originally outlined by Father Rigney, the plan is a letter-writing campaign to Chairman Mao Tse-Tung, head of Red China's government, politely petitioning the release of the Americans still held prisoners by the Chinese Reds.

The address is Chairman Mao Tse-tung, Peking, China. Father Rigney recommends the use of a 25-cent airmail stamp because, as he has stated, "the misinformed Chinese will be astonished to see that American laborers can afford airmail. In Red China a carpenter must work several hours to purchase an airmail stamp."

The priest has declared that the letters should contain three principal points.

The writer should give his name, occupation, name of the labor union, if any, marital status, and number of children.

The Red chief should then be reminded that his government promised in September 1955 to free the American prisoners still held in Red China, and that the writer would like to see him keep his promise.

In conclusion the writer may say that he hopes Mao Tse-tung will demonstrate the policy of leniency which he has previously professed.

In his personal appeal to Americans throughout the country Father Rigney declared.

"I know what prison life is like in Red China, a veritable hell of mental and physical tortures. I am sure these prisoners are going through the same or similar tortures I endured. If your letter helps reduce even to a small extent the imprisonment of these fellow Americans it will be well worthwhile and they will be eternally grateful to you as I am to the tens of thousands who wrote letters in my behalf."

It was announced during the July 9 meeting that Monsignor Boyle's letter to the Advocate (June 30) was entered in the July 2 Congressional Record by Congressman T. James Tumulty.

The Congressional Record of June 20 also contains an appeal for support of the crusade by Congressman Hugh J. Addonizio. A letter from Congressman Addonizio was also read at the July 9 meeting. In this message, he stated that he had written to Mao Tse-tung and had also directed an appeal to the president of the American Broadcasting Co. to present the freedom crusade on a national basis.

Material for the freedom crusade will be in the hands of county presidents soon, according to the directors.

Hildrus Augustus Poindexter

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Record, I include the following deserved citation given to a great American on the occasion of his being awarded an honorary degree of doctor of science at Dartmouth College, June 1956:

Hildrus Augustus Poindexter, Medical Director, Chief of Health and Sanitation Division, United States Operations Mission to Vietnam, Doctor of Science

Lincoln University A. B., graduate of the Dartmouth Medical School in 1927, Harvard M. D., Columbia A. M. and Ph. D., sometime fellow of the Rockefeller Foundation, professor of Howard University, colonel of the United States Army Medical Corps, and one-time porter of the Pullman Co., you have the rare distinction of having saved human lives on a vast scale. Born into the poverty of a farming family in Shelby County, Tenn., educated through the generosity of others, and your own determination, you equipped yourself to become a world authority on the control and elimination of malaria, the largest health impairment of human effort on the face of the earth. As teacher and researcher and author of some 70 scientific publications in microbiology and public health, as Army officer, administrator, and public-health official, you have followed the trail of the malaria-bearing mosquito into well-nigh all the continents and archipelagos of the world. Holder of the Bronze Star for spectacular reduction of the malaria scourage among our soldiers in the South Pacific, Knight Commander of Liberia for a similar service to that land, Dartmouth, where you received your first professional education, is proud to count you among the most honored in her fellowship as doctor of science, honoris causa.

Adolphe H. Wenzell

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 19, 1956

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "A Tear for Adolphe," published in the St. Louis Post-Dispatch, concerning Adolphe H. Wenzell, who, as consultant to the Government, helped to work out the Dixon-Yates deal.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

A Tear for Adolphe

We are beginning to feel sorry for Adolphe H. Wenzell. Poor Adolphe has all the earmarks of a scapegoat. He resembles the luckless native who is thrown from the sled to keep the wolves at bay. He is the ballast dropped to keep the balloon up, the cargo jettisoned to save the ship, the sacrificial lamb offered on the altar.

Mr. Wenzell was the vice president of First Boston Corp., who as consultant to the Government, helped work out the Dixon-Yates deal, which his own banking firm then undertook to help finance. The Dixon-Yates deal was the Eisenhower administration's scheme for supplying Memphis with power while simultaneously striking a crippling blow at TVA. For a long time there in 1954 and 1955, the administration poured ergs and ergs of energy into the drive to put Dixon-Yates across, and Adolphe H. Wenzell was in the thick of it all.

Alack, how fickle fortune can be. Under great pressure, President Eisenhower finally scuttled Dixon-Yates. Messrs. Dixon and Yates sued for their alleged expenses. Attorney General Brownell's Department of Justice, defending the suit, has now filed a reply which cites Mr. Wenzell's dual role as the main reason for repudiating any Government obligation under the canceled contract. Mr. Brownell, in other words, is blandly agreeing with the very charges that were brought by critics of Dixon-Yates at the time he and other administration officials were strenuously defending it.

Mr. Wenzell, as the architect of Dixon-Yates, was doing what Chairman Strauss, of the Atomic Energy Commision wanted done. He was doing what the Bureau of the Budget, Presidential Assistant Sherman Adams, and President Eisenhower wanted done.

Whether the Government which worked so closely with Mr. Wenzell in this enterprise can now escape legal responsiblity by calling it unlawful and denouncing Mr. Wenzell for conflict of interest is a matter for the courts to decide. But we can't help shedding a tear for poor Adolphe. It's a sad thing to happen to one of the boys.

Code for Contests in Public Speaking

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD a code for contests in public speaking, which was prepared by and endorsed by the membership and executive committee of the Speech Association of the Eastern States:

CODE FOR CONTESTS IN PUBLIC SPEAKING ENDORSED BY THE SPEECH ASSOCIATION OF THE EASTERN STATES

Observing the failure of many contests in oratory adequately to meet the educational needs of students in secondary schools, colleges, and universities in the eastern sector of the United States, the Speech Association of the Eastern States hereby records its approval of the following code for contests in public speaking:

A. Because of the sundry unpleasant associations which have clustered about the term "oratory," with its 19th century frame of reference carried into the mid-20th century, it would be prudent to replace the label "oratory" with one more connotatively acceptable, "public speaking."

B. Institutions and agencies which sponsor contests legitimately obtain therefrom public-relations prestige. This prestige is enhanced whenever the primary motivation becomes the providing of sound training in effective communication of ideas for American youth, the potential future leaders of American Government, society, the culture. Uppermost in the minds of all who direct such contests should be the future benefits which may accrue to all students who participate: all those who enter, all those who win. Directorial procedures should insure useful learning and just appraisal for each contestant.

C. All contests should be directed, and all students entering contests should be guided, by teachers competent in the discipline of public speaking. Normally such competence is attained through higher education and teaching experience in this area of the field of speech. If a secondary school, college, or university electing to participate in a contest has no teacher of public speaking on its faculty, it should either (1) employ one for the specific task of training its students for such contest or (2) enable a member of its existing faculty, at least by partial financial subsidy, to pursue summer-session study in public speaking at a recognized college or university in order to qualify for direction of such contest during the following year.

D. Judges:

1. All contests should be judged solely by persons competent in the discipline of public speaking. Normally such competence derives from higher education and teaching experience in this area of the field of speech. Competence may also derive from practical experience in communication. Community leaders are often wise judges of public speaking: Their wisdom, however, does not derive from such professions as law, ministry, and teaching of subjects other than speech. The criterion in selection of judges should always be not profession, not position, but knowledge of and ability to apply standards of effective modern speaking. Such selection renders superfluous the type of ballot which excessively classifies criteria and demands unreliable assignment of minute percentage points in rating scales. The importance of selection of judges cannot be overemphasized, since contests rewarding ineffectual communication swiftly and seriously sabotage the educational goals of such contests. A contestant who diligently, judiciously prepares a speech acquires an inalienable right to evaluation on the basis of sound, relevant criteria.

2. Further to insure competent decisions in contests, normally each judge should receive at least a token honorarium, plus expenses, for rendering his expert service. No administrator would employ in an athletic contest a referee who did not know the rules of the game; nor would he request such service without compensation. The analogy with contests in speaking is patent. When necessary to conserve finances, contest directors may employ a carefully selected single critic-judge; for such service a minimum fee would be $25, plus expense. On the other hand, this association believes that no educational institution or sponsoring agency which is honestly unable to include judging fees in its contest budget should thereby be deprived of the services of an expert evaluator. Members of this association should always stand ready to render such service gratis—provided, it must be added, that such contribution is unequivocally recognized and acknowledged by the sponsoring institution or agency as an educational contribution by a professionally trained expert.

E. Both in directing and in judging contests in public speaking the following standards should be adduced:

1. A basic criterion should be the conception of an original, significant, single idea in the speech. This idea should arise from the speaker's own knowledge and experience, with this initial conception supplemented by considerable research.

2. Another criterion should be the structuring or organizing of the speech which develops this single idea. It should be divided, logically, or psychologically, into its component subideas, which should add up to relevant, adequate support and development of the idea itself. Assertions should be followed by tangible evidence and proof; authorities should be identified. Abstractions should be translated into concrete instances. The specific should be preferred to the general. Examples, illustrations, and other devices of interest should enliven as well as clarify the development. Above all, adaptation to the particular audience should be stressed. A speech should never be presented in a vacuum to a phantom audience; it should be directed to real listeners, whose knowledge, experience, interests, and attitudes determine not the idea for the speech itself, but how that idea can be effectively presented. A contest speech on a single subject should mutate in its development as the audiences which hear it mutate; it should be restructured for each new group of listeners to whom it is given.

3. Still another criterion should be the delivery of the speech, which, because it is a means to an end, should not be adjudged more important than the factors of conception, organization, and development. Three methods of preparing to deliver a speech are available; each contest should prescribe one of these methods:

(a) The contestant may write out his speech and read it from manuscript. If this method is prescribed, he should be trained to write a manuscript which manifests oral rather than written style: it should not sound like "an essay standing on its hind legs." He should also be trained to read that manuscript so that he converses with his listeners, with spontaneity and with audience contact. His efforts should be judged on the basis of his ability to write and to speak as a speaker. Because this method of preparation will be employed only rarely in the contestant's later occupational and civic life, this association does not recommend this method.

(b) The contestant may write out his speech and memorize it. Again, he should be trained to write in oral rather than written style. In delivering his speech from memory, moreover, he should be trained so to speak it that no listener could possibly suspect it has been memorized by rote: the delivery should be utterly natural, spontaneous, conversational; never mechanical, artificial, or seemingly planned. Despite the fact that the contestant has memorized his speech, he should not merely repeat the words; he should communicate the ideas, what the words mean. Gesture and inflection of voice are significant only if they unpremeditatedly evolve from a sincere realization of the worth of what one is saying and contribute to the transference of meaning from speaker to auditor. The contestant's effort should be judged on the basis of his ability to write a speech rather than an essay and, as he speaks, to rethink his thoughts at the moment he utters them. Because of the enormous amount of time required successfully to write and to deliver from memory, because the memorized method is inefficient and rarely employed in the communicative situations in which a student will later engage in his vocational and avocational life, and because this method tends to produce a stilted, unnatural, often regrettably bombastic style, this association does not recommend this method. In an educationally defensible contest a student should prepare for life by employing a method which normally he will need to use in that life.

(c) Hence this association recommends the so-called extemporaneous method of preparing and delivering contest speeches. This method should not be confused with the impromptu method, in which no specific preparation occurs. With the extempore method a great deal of preparation precedes delivery: much thinking, investigating, careful planning, incorporating that planning into a competent outline, adapting content to the needs of listeners, practicing the speech aloud with or without outline or notes. All is prepared save the actual wording of the sentences expressing the ideas, which is spontaneously evolved as the speaker speaks—in his preliminary practice and in the contest speech itself. This method forces the speaker to think his way through the development of his idea as he speaks, thus to afford to his listeners the impression of a desire to communicate genuinely with them, with a becoming naturalness instead of a corrupting artificiality. The contest speaker should evidence an attempt to understand and to implement the paramount concept of modern oral communication: that the place where a speech really occurs is not on a platform, not even in the functioning intelligence of the speaker, but always in the minds of those who listen. A contest speech is not an exhibition of skill, not a performance before people: it must communicate ideas to and with people.

Adopted by the Speech Association of the Eastern States in annual business meeting on April 14, 1956. Approved in final form on May 18, 1956.

Defense: Too Little, Too Late?

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, I have been disturbed by the unwarranted and dangerous complacency which has characterized this administration's handling of our defense program. I include as part of my remarks for the information of my colleagues an excellent article on the subject Defense: Too Little, Too Late? which appears in the August 1956 issue of the Democratic Digest:

DEFENSE: TOO LITTLE, TOO LATE?

It was summer again all right, but somehow it didn't seem quite the same. The beaches were perhaps a little more crowded, turnpike traffic a little thicker, cars a little longer, your breath a little shorter. There were more television sets than ever before, more chromium on the family car—both of them. The fidelity was higher, the skin divers lower, the sports cars faster, the youngsters seemed a little older and the oldsters seemed a little younger.

But it was more than that—there was something nagging in the back of the mind, something in the air, something which seemed to say: It will never be the same again.

And the unhappy truth is that it never will. For in the spring of 1956, while Americans were planning their annual summer dispersal to the mountains and the shore, a Senate subcommittee, studying United States airpower, brought out the unpleasant fact that for the first time in history, it would soon be possible for another nation to attack America and deliver a knockout blow before her colossal production capacity could be thrown into high gear.

And as the subcommittee put on the record what had already been implied in a long series of forewarning speeches, documents and magazine articles, there was increasing doubt as to whether the country would be ready for that day of unprecedented peril when it arrived.

Three years ago, the leaders of a nation which could easily outproduce any two countries in the world had made a fateful decision. It had been foreshadowed in the campaign of 1952 by repeated statements of General Eisenhower and others. "But the big spending is, of course," said candidate Eisenhower in Baltimore, "the $60 billion we pay for national security. Here is where the largest savings can be made."

The problem, as the newly elected Eisenhower team saw it, was to balance the Great Equation—to equate needed military strength with maximum economic strength. In words they insisted that the efforts to achieve both sides of the equation should be equal. But in action, in everything they did, it was obvious they really believed that the efforts on one side, to paraphrase George Orwell, should be "more equal" than efforts on the other side. And for the Eisenhower team, made up mostly of big-business men, the "more equal" side was the economic.

They decided that, despite the changing nature of warfare resulting from the release of atomic energy, the most important thing still was to cut spending and balance the budget so that we would be in a position to reduce taxes as soon as possible—not so much individual taxes, it soon became clear, as corporate taxes.

It was called "a calculated risk," a description which was clarified by Senator STUART SYMINGTON: "They calculate the budget figures," Senator SYMINGTON said, "and the people take the risk."

As a result, by the spring of the year 11 A. H. (After Hiroshima), while the budget balancers boasted of a $2 billion surplus in the Treasury, while merchants were using fire-sale tactics to peddle TV sets, while every car lot in the Nation was packed with unsold automobiles, in Washington an alarmed group of Senators sat and listened to one Air Force General after another testify that because they had been denied the money (1) the world's most powerful Nation would soon have the world's second best Air Force, and (2) there were grave doubts about the future ability of the United States to defend itself against a coordinated surprise attack.

This came as a considerable shock to a nation which had been assured by the Eisenhower team, when it came up with its new look defense policy, that although there had been drastic cuts in our Armed Forces, we would have an overwhelmingly superior Air Force: "I assure you * * * most emphatically," said Defense Secretary Wilson, "that we are not going to have the second-best Air Force."

Just as there are today those who disagree with President Eisenhower and Wilson about the relative strength of United States-Russian air power, there were those who disagreed then with the reduction in the size of our ground forces. Among them was a member of the Joint Chiefs of Staff, Gen. Matthew Ridgway, who eventually resigned in protest. "I do not recall," Ridgway wrote in his memoirs, "that I ever felt a greater sense of surprise and shock than when I read in President Eisenhower's state of the Union message in 1954 that 'The defense program recommended for 1955 * * * is based on a new military program unanimously recommended by the Joint Chiefs of Staff.'

"As a member of the Joint Chiefs of Staff who most emphatically had not concurred in the 1955 military program as it was presented to the people, I was nonplussed by this statement. The fact is, the 1955 budget was a 'directed verdict,' as were the Army budgets for 1956 and 1957. The force levels provided in all three were not primarily based on military needs. They were squeezed within the framework of preset, arbitrary manpower and fiscal limits, a complete inversion of the normal process."

But when Ridgway objected to the policy, it was suggested "sometimes subtly, sometimes crudely," as he put it, that when all was said and done how could he really presume to know more about the subject than the President. On one occasion Secretary Wilson flatly stated that the forces recommended were approved by the President, who was, as everyone knows, a former soldier of wide experience, and to express opposing views would place Ridgway in the position of taking issue with his Commander in Chief. "And that," said Mr. Wilson, "would not be good."

When it would not be good for General Ridgway, a member of the Joint Chiefs of Staff, a soldier of wide experience and outstanding service in World War II and Korea, to question the President's judgment, then it was apparent that no one—from former Secretaries, Assistant Secretaries, and generals of the Air Force on down—should be presumptuous enough to question Ike's judgment.

That the Eisenhower team stands firmly on this position has been demonstrated over and over. Not long ago in a television debate, Paul Butler referred to the alarming testimony given by General LeMay, General Partridge and other Air Force chiefs, before the Symington subcommittee, and questioned the state of national security. Leonard Hall replied with considerable sarcasm: "I really do believe that * * * we will have more respect for [General Eisenhower's] opinion on what is preparedness rather than the opinion of General Butler or General Symington."

"But what about LeMay's testimony?" replied Butler, still trying to bring the issue out for debate.

"In my opinion," Hall repeated, "President Eisenhower will never let this Nation be unprepared."

Despite repeated efforts to impress upon us the infallibility of Ike's judgment, it has been apparent ever since the late Gen. Hoyt Vandenberg severely criticized the cuts imposed upon the Air Force, that there are many experienced, well-informed, responsible people—in and out of Government and the Armed Forces—who question the state of the Nation's preparedness, and who fortunately have not been intimidated by the presence of 5 stars at 1600 Pennsylvania Avenue. In fact, the criticism of the Nation's defense position is so widespread, it is almost as if President Eisenhower were standing alone in disagreement with the entire informed opinion of the country.

For instance:

After a long and impressive speech before the Society of Eusiness Magazine Editors in which he told how Russia was forging ahead of us with the speed and quality of their military production, Adm. H. G. Rickover asked: "Is the Soviet Union a serious threat to our survival? If the answer to that is 'Yea' then we must ask ourselves this second question: Is the Nation doing all that it can and all that it should to turn back that threat? If the answer to that is 'No.' then I submit that something is wrong with us and that we are in trouble."

That we are in trouble has been obvious to Senator SYMINGTON, who has been advocating increased defense appropriations for 3 years. Last February, while recommending an article by Arthur Godfrey stating that the United States needs 1,200 B–52 bombers, and that at the rate we are building them it will take 24 years, SYMINGTON asked if we should boast of our technical superiority at a time when "over one-third of our modern jet bombers attached to the Tactical Air Command were grounded because of lack of mechanics?" As for the lag in B–52 production, the Senator said he had asked the reason for it, and the answer was: "We have three problems—the first is money; the second is money; and the third is money."

Last year Dr. James Killian, Jr., president of the Massachusetts Institute of Technology, formed a committee to study the relative military and industrial strength of Russia and the United States. Although the Killian report has not been made public, some of its conclusions were revealed last September by columnist Joseph Alsop writing in the New York Herald Tribune. Among other things, said Alsop, the Killian report shows that Russia is overtaking the United States in the air atomic weapons race and that between 1960 and 1965 the Russians will surpass us. To prevent this, the report concluded, it would be impossible not to upset the administration's budget planning.

Gen. Donald L. Putt, Air Force Deputy Chief of Staff, has warned that the United States is lagging in basic research. He was particularly concerned with the grave possibility that Russian scientists might come up with a technological surprise like a super-intercontinental guided-missile.

Last February, Senator HENRY M. JACKSON said in the Senate that there was good evidence Russia would test an intercontinental ballistic missile with a 1,500-mile range by the end of this year. He charged that the United States guided missile program was seriously bogged down.

Any doubts about the accuracy of Senator JACKSON'S statements were dispelled by two

articles written for Look magazine by former Air Force Assistant Secretary Trevor Gardner, after his resignation. Our program to build the first ICBM, Gardner concurred, "is snarled up in bureaucratic redtape * * * is smothering in an administrative nightmare of committees and subcommittees competing with each other for influence and appropriations. * * * With every tick of the clock the Soviet Union is moving closer to the capacity of knocking the country out * * * the danger America faces has not been apparent to the general public because it has not been revealed."

Further evidence of confusion in the Pentagon was revealed recently when an interservice feud broke out in the open.

The New York Coliseum

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1956

Mr. HOLTZMAN. Mr. Speaker, on Thursday, May 12, 1955, the Honorable James F. Walsh, managing director, New York Coliseum, spoke before the National Council of Business and Professional Men, Inc. on the subject The Effect the New York Coliseum Will Have and What It Will Mean to the Businesses in New York City and to the Exposition Business Throughout the World.

Mr. Walsh was the manager of exposition department, Grand Central Palace, New York City, until the exposition floors of the building were leased to the Internal Revenue Bureau of the United States Treasury Department. He is a recognized expert in this field, having had many years experience organizing and producing international, national, and local expositions. He is a vice president of the International Auditorium Managers Association and a member of the Horticultural Society and the Hotel Executives Club. He is now renting agent of the New York Coliseum which opened in April 1956.

Mr. Walsh showed the two scale models of the New York Coliseum. One is the neighborhood model, which shows all of that area; the other was a demountable or take-apart model, which showed the exhibit space, elevators, escalators, meeting room areas, and all of the facilities which are now available to exhibitors who will use the coliseum.

Because of their importance, I insert both the release of the Triborough Bridge and Tunnel Authority, of which the Honorable Robert Moses is chairman, and the address of Mr. Walsh:

RELEASE OF THE TRIBOROUGH BRIDGE AND TUNNEL AUTHORITY, MAY 12, 1956

About $60 million in new money will be brought to New York City each year by trade shows using the New York Coliseum, James Walsh told members of the Council of Business and Professional Men at a luncheon at the Advertising Club on May 12, 1956. Mr. Walsh, who is renting agent, also predicted that completion of the New York Coliseum would mark the start of a great improvement development for the whole west side of the island.

Formerly in charge of booking shows at Grand Central Palace, Mr. Walsh recalled that when that building was opened in 1911, there were hardly any buildings or businesses above 42d Street on the East Side. Soon after the palace opened, hotels, restaurants, drug and clothing stores and many other types of businesses sprang up around the palace. He predicted that a similar development would take place around the New York Coliseum.

Mr. Walsh also estimated that from 2½ to 3 million people would visit the New York Coliseum each year. These people will come from all parts of the world, and represent a huge source of buying power. The effect of their spending will be felt by every type of business in the city. Mr. Walsh revealed that already tentative bookings for shows have been made from the very day the building opens.

Mr. Walsh had high praise for Commissioner Robert Moses and his associates for their determination to erect this building in the heart of the city, convenient to all forms of transportation.

Using a demountable scale model, Mr. Walsh showed the council members just how the four floors of exhibit space could be used for one big exhibit, or broken up to handle several shows at one time.

SPEECH OF HON. JAMES F. WALSH

Mr. Chairman, Mr. Bayern, members, distinguished guests, I was very pleased and flattered when your chairman invited me to come down to the Council of Business and Professional Men and meet with you today, and I greatly appreciate the opportunity of being here—particularly when I am priviledged to talk with you about the New York Coliseum, in which I know you all have a great interest.

Your chairman was kind enough to send me a copy of the speech recently given you by the Honorable Abe Stark. That was a great speech. Mr. Stark has some prosperous ideas for the city of New York, and no small part of the future prosperity of this city is centered around the New York Coliseum.

It is estimated that the trade shows and public attractions that will be held in the new Coliseum will bring an additional $60 million to this city every year. That means that over a million dollars of new money will find its way into the cash registers of the businesses of this city after the New York Coliseum is open. And ladies and gentleman, that is a lot of money.

My predecessor in this business, Mr. Fred W. Payne, who opened the Grand Central Palace in 1911, often told me that when the palace was built, there were hardly any buildings or businesses above 42d Street on the East Side, but soon after shows began to be held and crowds began to come to the palace, hotels sprang up, restaurants, drug stores, clothing stores, etc., all came into being in that area. We can justly anticipate that new hotels, new restaurants, new stores and new business of all kinds will spring up around the New York Coliseum. If history repeats itself, there will be a great improvement in the whole West Side of Manhattan Island.

It is estimated that 2½ to 3 million people will visit the New York Coliseum each year, and they will come from all parts of the world. They represent a huge source of buying power, and more buying power means new businesses, and new businesses mean more employment.

The trade shows and public attractions that will be held in the New York Coliseum will all be of prestige nature. They will be the largest and finest that are now held not only in New York City, but in other parts of the country. We have a great many tentative bookings now from the very day the New York Coliseum will be open.

The businessmen in this city, in this Nation, and the exposition world universally, should be forever grateful to Commissioner Robert Moses and his associates for creating this magnet which will make New York City, in addition to being the financial and business capital of the world, the exposition capital of the world, come March 1, 1956.

The New York Coliseum will be located the very heart of New York City. Probably no other location in the city is accessible to more means of transportation. The Eighth Avenue, Sixth Avenue, and IRT subways are right at the building. The Eighth Avenue, Broadway, and Fifth Avenue buses pass the door. Another bus that passes the door is the 72d Street Crosstown. The BMT subway and the 57th Street Crosstown bus are only a block away. It is only minutes—perhaps less than 15—away from the Pennsylvania and New York Central terminals, and from a great collection of New York City's finest hotels.

Those of us who use the facilities created by the Triborough Bridge and Tunnel Authority—the bridges, the tunnels, the highways, etc.—have implicit faith that the New York Coliseum will, too, be the finest and most complete exposition hall that has ever been built.

The Triborough Bridge and Tunnel Authority has had these two models of the New York Coliseum built as a sales utensil. One is a neighborhood model and the other is a take-apart model, so that promoters of such activities as will be held there may have a visual concept of what the building is going to be like. In a minute I will take one of these models apart to show you the facilities of this great building, but before we do that I want to mention a few of the amazing features of the New York Coliseum.

In size it will be tremendous.

It will have approximately 300,000 square feet of net exhibit space, with zone-controlled air conditioning; beautifully and adequately lighted.

Ladies and gentlemen, it will be two blocks—a bus stop—from one side to the other.

It will have 4 floors, with 4 separate lobbies, so that 4 separate expositions can be held at the same time; however, all of this space can be thrown into one, for large expositions taking the entire building.

It has been estimated that the electric current that will be needed for this building would supply the average town of about 25,000 to 30,000 inhabitants.

One large freight elevator, which, by the way, is probably the largest in existence outside of what the armed services use, is designed to lift 40 tons at one time. Forty tons, as such, doesn't mean very much to the average person, but to put it in the language that even I understand, it means it would lift 10 full-grown elephants at one time.

Now let's take a look at the models.

Concern for Ike's Health

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mr. MINSHALL. Mr. Speaker, to clear up a misunderstanding that seems to be prevalent among some of my colleagues on the other side, I wish to call attention to an editorial which appeared

in the Cleveland Plain Dealer on July 18, 1956.

The editorial follows:

CONCERN FOR IKE'S HEALTH

The Democrats are greatly concerned over President Eisenhower's health, if the Democratic Digest, which is the official publication of the Democratic National Committee, is representative of their thinking. For the Digest this month charges that a "snow job" was done by Mr. Eisenhower's associates to gloss over the President's illness and insinuates that it is much more serious than anyone has been led to believe, including the President and his family.

This attitude may seem strange, coming from the same source which did such a thorough "snow job" on the state of Franklin Roosevelt's health in 1944. Nevertheless, the health of presidential candidates is a proper subject of discussion during a campaign, as we have contended, but the Digest is in error, we think, when it asserts that information regarding Mr. Eisenhower's two illnesses has been concealed from the public. On the contrary, there has never been a case of presidential illness in the history of the country when the public has been kept so well informed.

The Digest attempts to make its case by quoting from the critical writings of newspaper reporters and columnists who had to find something to write about during the long period when Press Secretary Jim Hagerty was replying "no comment" to questions about the President's second term intentions. These articles pretty well dispose of the "one party press" charge which the Democrats are so fond of making.

What the Digest proposes, however, is that the President's doctors be grilled at another press conference. This presupposes that the doctors were lying the first time, that they deliberately concealed the facts from the patient, his family and the public, in order to accomplish the purpose of getting him to run again. Presumably the alert newsmen, who don't know a scalpel from a suture, but are armed with observations from other doctors who have never examined the patient, would be able to ferret out the truth.

The suggestion is utterly preposterous. Mr. Eisenhower has said in so many words that he would resign or not be available for another term if he felt he was incapable of doing his job. We believe him, and we think most of the people do also.

Still, it's nice to know that the Democrats are concerned about the President's health. We are, too. We hope that, because of this partisan needling, he doesn't try to do too much, too soon, just to prove that he is making satisfactory progress toward full recovery.

United States Servicemen Face Double Jeopardy in Foreign Courts

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. GROSS. Mr. Speaker, news dispatches from Japan report that two enlisted men of the United States Marine Corps, station in Japan, are scheduled to be tried twice on the same charges in a Japanese civil court.

According to the news dispatches, these marines were tried by a Japanese judge, convicted, and their sentences suspended. Now the Japanese prosecutor, dissatisfied with the decision of the Japanese judge, insists that these American servicemen be retried on the same charges again in a Japanese civil court.

The following excellent editorial from the pages of the Waterloo, Iowa, Daily Courier points up the jeopardy to which American servicemen are exposed when handed over for prosecution in foreign civil courts—a jeopardy which ought to be of grave concern to every American citizen:

MARINES MUST FACE SECOND TRIAL IN JAPAN

Although the United States Constitution guarantees certain protections to citizens accused of crimes, the Government has surrendered these rights for servicemen accused of off-duty offenses in many foreign countries.

Perhaps better relations with these countries are obtained by subjecting American servicemen to this hazard. But it nevertheless appears unfair to draft a man for military service and then compel him to surrender his constitutional rights. There is considerable—though not decisive—evidence that American servicemen have not received fair trials in countries like Japan where the judicial traditions are at such variance with our own.

Now the United States court of appeals has ruled that this surrender of rights is legal in the case of three marines. Two of them received suspended sentences in their first trial; but they are now to be exposed to a second trial because the prosecution is dissatisfied with the sentence.

We hope the case is carried to the United States Supreme Court. Would not the judges who have showed such an interest in the civil rights of American Communists be inclined to demonstrate greater concern for the rights of American servicemen?

One Hundred and Two Years

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Evening Standard, Uniontown, Pa., relative to Dr. John Dawson Sturgeon, Sr. Dr. Sturgeon, dean of Pennsylvania physicians, recently celebrated his 102d birthday. He has been an outstanding member of the medical profession for many, many years and is admired and beloved by all. Very few of us can hope to reach the imposing total of years to which Dr. Sturgeon has attained and I know that all of my constituents join me in extending congratulations to him. The editorial follows:

ONE HUNDRED AND TWO YEARS

Dr. John D. Sturgeon, Sr., started his 103d year this morning.

The gentleman who is reported to be the oldest living physician in the United States spent his birthday yesterday quietly at his home on North Gallatin Avenue.

To the good doctor have come many tributes.

Two years ago on his 100th birthday the community honored him.

He has watched Uniontown's passing parade for years from his sturdy rocking chair on the porch of his home. To many of us and our families he has been the family doctor. Hundreds of Uniontowners still look to him as their doctor because he was the one who brought them into this world.

Gen. George C. Marshall, a close friend, summed up a tribute to Dr. Sturgeon when he said:

"He represents the best of citizenship, a fine example of service to his fellow man, a model of integrity and simplicity and a great doctor of the humanities."

Congratulations and best wishes, Dr. Sturgeon.

More Social Security

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial which appeared in today's issue of the New York Times, entitled "More Social Security."

The editorial follows:

MORE SOCIAL SECURITY

The amendments to the Federal social security law passed by the Senate call for benefits to about 1.2 million men and women who don't receive them now. The bill provides that practically all the self-employed, except physicians and osteopaths, receive full coverage, adding about 200,000 to the present rolls. Working women—now in line for full benefits, as are men, at 65—would be eligible at 62 for 80 percent, and wives of retired workers for 75 percent, of what they would get if they had waited until they were 65, with yearly increases up to the full amount at that age. Widows, however, would be entitled to full benefits at 62. These new payments would be available to about 775,000 women. And, finally, all workers on the social security books who become disabled would get benefits at 50 under the same general formula now used for all those who are 65 and over—adding 250,000 more beneficiaries.

The bill provides for new taxes to meet the disability payments. Employers and employees would each pay one-quarter of 1 percent on the first $4,200 of initial earnings of those who are covered, while the self-employed would pay three-eighths of 1 percent. These contributions would be paid as part of the regular social security taxes—now 2 percent each from employers and employees—but the proceeds would go into a separate fund designed to be always in the black.

In voting on the disability and women's age provisions of the bill Senate majorities overcame strong opposition from the administration and overrode the recommendations of their own Finance Committee. This was a victory for the Democrats, who with only four exceptions (including Chairman BYRD of the Finance Committee) voted for the amendments. They were joined by only six Republicans. While the special treatment of women is open to serious question, the aging disabled deserve what the bill would give them—and with manageable financing. The expanded coverage has been long overdue.

The Senate bill now goes to a joint conference committee for reconciliation with a House bill, passed last year with little opposition. This is much the same, except that

it would give women full benefits at 62. When the measure reaches the President's desk the public interest, and that of his own party as well, will demand that he promptly sign it.

The liberalization and expansion of the Social Security Act has been necessary for some time, and when the bill is reported out of conference, I am sure that it will meet with no further delays in the House or the Senate.

I was happy to note that the bill as passed by the Senate carries a provision to lower the age limit for eligibility for benefits for working women and wives of retired workers from 65 to 62 years of age. I had previously introduced legislation which would have provided for the lowering of this age limit to 60 years, and while the pending bill did not go that far, I feel that this current provision is a well-won victory, as is the amendment calling for additional disability benefits.

In the interests of all those now eligible, or who will become eligible for social-security benefits, I urge the President to sign the bill as soon as the conference report has been approved by the House and the Senate.

Our Pigtail Veterans' Program

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. CHRISTOPHER. Mr. Speaker, when the Congress undertakes to pension America's old disabled and down-and-out veterans, invariably certain propagandists attempt to stampede the American taxpayers by citing astronomical cost projections. But what about our pigtail pension program? Yes, how much in dollars and cents are the taxpayers paying to pension Chiang Kai-shek's soldiers who turned their backs to the Communist invader?

According to reliable press reports, Mr. Eisenhower's ICA is really going to town for Chiang's army. I am talking about the Free China veterans' program being set up by Mr. Harold V. Sterling, a retired Assistant Administrator of our own Veterans' Administration.

Under this program $48 million ICA money will be spent this year—as initial outlay—to pension 70,000 veterans of Chiang's forces and to build old soldiers homes, military convalescent camps, a general hospital, a tuberculosis hospital, and several public works projects.

The projects are being supervised by the George Frye Associates, a management organization, with offices in New York and Chicago and, of course, at the taxpayers' expense.

Now the veterans being pensioned are not service-connected. They are just being retired at United States expense. According to Ralph Boyce, of the ICA, this "is a means of getting rid of old soldiers to make room for new ones." That's a service pension scheme if I ever heard of one.

Of course these expenditures represent only the beginning, and from year to year the Congress will be called on to appropriate the necessary funds for completion of Chiang's building program and to hand over the money for the pension payments.

Two More Germans Killed in Attacks Laid to GI's

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. FORRESTER. Mr. Speaker, we hear too often that we must or must not do certain things because we will offend Russia and her satellites. Actually, it would be more practical to consider the feelings of our Allies. Some people wonder why there is a growing demand in West Germany that our soldiers be brought home, and we should be interested in some of the reasons why.

To those who are interested, I refer them to an article in the Washington Evening Star of Monday, July 16, 1956, wherein it said that "There Is no Room for Gangsters and Sex Maniacs in the Federal Republic." This article states that they want the world to understand that "there is no room in the Federal Republic for gansters and sex maniacs who still believe they can treat our women and girls as unprotected game and who—apparently still under the influence of wartime agitation—would like to grant Germany only a sort of colonial status."

The article itemizes instances of gangsterism and sexual offenses and says that seven United States Negro soldiers are now charged with alleged rape of a 15-year old girl. In the name of decency and Christianity this should no longer be permitted. Our record in that regard is absolutely astounding. There is no hope in this world to gain respect of decent people when their women are raped and defiled. The thousands of mulattoes in Germany and the breakdown of morals is correctly charged to us. The article reads as follows:

TWO MORE GERMANS KILLED IN ATTACKS LAID TO GI'S

FRANKFURT, Germany, July 16.—American GIs today were blamed for two more attacks on Germans and a government spokesman fired off the strongest official blast so far at the alleged increase in crimes involving allied soldiers in Germany.

German police announced that a 20-year-old Munich construction worker had died after being seriously maltreated by a drunk American soldier.

They said a group of GIs attacked him as he was standing with his fiance and friends in a Munich street. United States Army officials said military police are investigating.

Bavarian police at Fuerth also reported that a 20-year-old German was struck fatally in a beer-hall argument with a GI. Meanwhile, State Government Press Chief Josef Gutberlet wrote in the official gazette of the Rhineland-Palatinate state that "there is no room for gangsters and sex maniacs in the federal republic." He claimed state authorities had registered almost as many indignities by allied troops in the first 5 months this year as in the whole of 1955.

The United States Army denies that there is any increase in the crime rate. But it says it is not standing on statistics and is working to improve the situation.

Mr. Gutberlet said in his article: "There is no room in the federal republic for gangsters and sex maniacs who still believe they can treat our women and girls as unprotected game and who—apparently still under the influence of wartime agitation—would like to grant Germany only a sort of colonial status."

A resolution by the Bamberg city council calling for the withdrawal of United States troops from that ancient Bavarian city was widely publicized last week. The demand, submitted to the Bonn Government, followed the alleged rape of a 15-year-old girl by 7 United States Negro soldiers. All of them are awaiting trial on charges of assault.

Dr. Edward A. Steiner, Friend of the Immigrant

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by John C. Sciranka, editor of the American Friends of Slovak Freedom, in tribute to the late Dr. Edward A. Steiner. The article which appeared in the Bethlehem (Pa.) Bulletin on July 13, 1956, follows:

DR. EDWARD A. STEINER, FRIEND OF THE IMMIGRANT

(By John C. Sciranka)

On Saturday, June 30, Dr. Edward A. Steiner, died in his 90th year at Claremont, Calif. The newspapers registered his death, noting that he was a scholar, lecturer and author.

I had a rare privilege to know Dr. Steiner and I had corresponded with him for many years. His last letter written to me 2 months ago was very inspiring. In spite of the fact that he celebrated his 90th birthday on November 1 last year, he was full of life.

Dr. Steiner was born in Slovakia, then the province of Hungary. He later wrote over 20 books in which he mentioned his native country. As described later by Annie E. S. Beard and Frederica Beard, in their "Our foreign-born citizens and what they have done for America," Dr. Steiner is placed in a category of such famous men as Felix Adler, philosopher, educator, reformer; Alexander Graham Bell, inventor of the telephone; Andrew Carnegie, a Scotch American philanthropist and steel kind; Dr. Alexis Carrel, a great medical investigator; George Washington Goethals, the builder of Panama Canal; Samuel Gompers, famous labor leader; Henry Morgenthau, famous ambassador; Joseph Pulitzer, famous journalist; Charles P. Steinmetz, Albert Einstein, etc.

Yes, through hunger, homelessness, and loneliness; the drudgery of work; the pangs of poverty and even the fire of affliction, Dr. Steiner was led in his experiences from alien to citizen and from his humble birthplace in Slovakia to an exalted position of

professor of applied Christianity in Grinnell College, Iowa, where he taught from 1903 until his retirement in 1941.

Dr. Steiner spent the best years of his life, pleading with voice and pen and sound, for an understanding of and a brotherly attitude toward the immigrant. He has often asserted that it ought to make no difference because they are Poles, Hungarians, Jews, Italians, Russians, or Slovaks. "For after all," he argued "they are human, and this immigration problem is a human problem with far-reaching consequences." Steiner dedicated his life to humanize the process of admission to this country and expose and abolish the worst abuses of the steerage. In his writings and lectures he used all his energy to interpret the quality and character of the new immigrant to those Americans who believed that these newer people were less than human.

Steiner dreamed in his native Slovakian village about America. Often he told his mother about his dreams. But she wanted her boy to stay near her. However, at last his boyish desire to get to America was fulfilled when one of his countrymen threatened to reveal to the government officials the awful fact that he had been guilty of sympathizing with and aiding the oppressed Slovaks. Steiner had to leave his native country and come to America, where he found no friends. In spite of knowledge of languages, he was destitute. All one day he walked the streets of New York looking for work and all day he had nothing to eat. He learned in this country the only thing free was ice water. Later he worked for $3.50 a week in New York. When there was no more work, he moved to New Jersey and worked on the farm. Losing his job, he started for Pennsylvania. The conductor put him off the train when he had no money for fare so he got a job in the tobacco field until Autumn, when he went to Pittsburgh and worked in a steel mill. He describes this as a bitter winter not alone of hard labor and small wage, but because of his utter isolation and the fact that no one had faith in him, for immigrants were regarded simply as cattle. He lived in a boarding house, where twenty boarders lived in two rooms. Life was merely, as expressed then, "work, eat, drink, get drunk and go to sleep." Just because he was a foreigner, he found it impossible to get a bath anywhere, for the boarding house did not provide one and he couldn't buy one in any decent place. He was happy in later years to register that through his efforts and appeals for decency his contemporaries of the Pittsburgh period are living under the best American ideals. The yearbook (Almanac) of the National Slovak Society marks the distance which these pioneers have traveled in less than a quarter of a century."

His life in Pittsburgh was hard and is well described in his autobiography "From Alien to Citizen." From Pittsburgh he went to Connellsville, Pa., where he worked in a mine for a dollar a day. But every evening he had to go to a saloon, where the boss drank at his expense. Here during the steel strike he was arrested, fined a hundred dollars, and spent 6 months in jail.

He determined later, as a result of this bitter experience, to visit prisons and penitentiaries, where he helped immigrants, who needed friends.

Once he helped six Greeks who were imprisoned in a Kansas town, because they bought beer in Nebraska and drank its contents on a Sunday in their camp by the railroad. Steiner's plea for them was so effective that the judge freed the Greeks. However, they had to pay $100 each as fine, which was a lot of money.

While later in Chicago, he lectured about Tolstoy and Bakunin. He later was sent to interview Tolstoy by the Outlook magazine. From Chicago he went to Minneapolis, where he enjoyed outdoor life on the farm and American education. Later, after many obstacles he enrolled to study for a minister at Oberlin College, where he graduated and was ordained. He served for a short time as minister and later went to Grinnell College, Iowa, where he spent most of his life outside of lecture and travels. The late Harry Hopkins, adviser to President F. D. Roosevelt, was one of Steiner's boys. Hopkins was a son of a poor saddler in Iowa. Steiner befriended him and gave him a start, by recommending Hopkins to his friends in New York where he met the Roosevelts.

In his writings to the undersigned, Dr. Steiner always liked to recall how he enjoyed himself while living in this country among his Slovak countrymen, hard-working miners in Streator, Ill., where he acted for a while as their correspondent. In his last letter, written to me over 2 months ago, Dr. Steiner invited me to California. In this last letter he wrote: "I often sing a few lines of a Slovak song. When I am asked, where I was born, I say always I am a Slovak." Dr. Steiner will always be remembered as a true friend of the immigrants. May his great work always inspire us to be like he was—do good to others.

New Department Commander of the American Legion, Department of Arizona

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD for the attention of the House a biographical sketch of the new department commander of the American Legion, Department of Arizona. This biographical sketch of Soleng Tom is truly an American success story. He is one of the few, if not the first Chinese American to achieve the position of department commander of the American Legion:

In 1930 when Tom, then 17 years old, arrived in San Francisco from Toyshan, Kwangtung, he had just about enough carfare to go to San Francisco's Chinatown.

Today his many businesses in Tucson are numerous. He now runs a real estate and insurance agency, three supermarkets, a drugstore, and an auction house. He owns a business center which houses a furniture store, a jewelry store, a clothing store, a variety store, a hardware store, a restaurant, a barber shop, a finance company, a beauty parlor, a bakery and a post office. He also is a cotton farmer.

Soleng Tom was born 43 years ago in Toyshan. He was reared by an uncle, who ran a hotel there, as his father was in Arizona most of his life, doing vegetable farming and laundry work.

In 1930 Soleng, then a student at the Toyshan Middle School, sailed for the United States to join his father. On arriving in San Francisco, he went to board, free of charge, at a Tom family benevolent house. He immediately tried to enroll at some school but he found it almost impossible because his English was so poor. Meanwhile he worked for a canning company, unloading crates of fruits from trucks. After several months in San Francisco, he went to Tucson to join his father, who was then running a one-man laundry.

Soleng's first job in Tucson was washing dishes in a Chinese restaurant. He got $3 a week plus all that he could eat.

Six months later his father received $1,000 from an insurance company when his policy matured. He quit the laundry and Soleng left the restaurant. Father and son started a grocery store.

The next year, 1932, Soleng's father took a trip to Kwangtung and Soleng took charge of the store. In the next 2 years, with a University of Arizona student working part time for him, Soleng managed to attend the Arizona Business College and also to learn to fly an airplane.

In 1934, his father returned from China, and Soleng, now armed with a diploma from the business college, went to the University of St. Louis to study aeronautical engineering. He recalls that there were seven other Chinese students in the engineering school, and all of them came from well-to-do families. But, he had to work his way through college—he took a job as a campus garbage collector and his wages paid his room and board. As his English was still rather poor, a sympathetic professor tutored him in the evenings. Soleng was so busy that he never saw a motion picture in his college days. By the end of 1936 he received a bachelor of science degree, having completed the two-and-one-half-year intensive course.

He then worked briefly for the Pan-American Airways at Alameda, Calif., near San Francisco. In the next 2 years, 1937–38, he became dean of the Chinese Aviation School at Alameda. The school, sponsored by the Chinese Six Companies, graduated 110 Chinese fliers in 2 years. After graduation, they returned to China to join the Generalissimo's air force. The school was suspended when World War II broke out—the United States Government launched its program of training Chinese airmen.

When Soleng went to the St. Louis University, he had not given up the grocery business in Tucson. Besides his interest in his father's store, he was 1 of 3 partners of a much bigger grocery store. When he worked for Pan-American and the aviation school in Alameda, he flew to Tucson every now and then to look after his interests.

In 1939, he proposed expansion but his 2 partners would not go along. With his share of $8,000, Soleng acquired credit for $56,000 to buy the site for his future business center and to build a supermarket and a drug store. The value of that property has increased tenfold in the last 16 years, due partly to the rapid growth of Tucson and partly to his capable management.

In 1942–44, he took a job with Consolidated Aircraft in Tucson, ferrying airplanes between San Diego, Calif., and Tucson. In 1944–46, he served in the United States Navy, working on transports flying between Alameda and inland. His father died while he was in the Navy.

In 1941, he had married Miss Mae Don, a Tucson girl, and the couple have 2 sons, 14 and 9 years old.

Nowadays, Soleng devotes most of his time to his real estate and insurance agency, supermarkets and drugstore. He is also very active in civic affairs.

He is a past commander of Post No. 7 of the American Legion in Tucson, a director of the National Foundation for Asthmatic Children, a director of the Tucson Red Cross, and a director of the Catalina (southern Arizona) Boy Scout Council. He is a member of the Lions Club.

He is past president of both the Tucson Chinese Anti-Communist League and the Chinese Chamber of Commerce. He is also a board member of the proposed Chinese Recreation Center in Tucson. (A Chinese school will be part of the recreation center to be built early next year.)

Voluntary Credit Home Mortgage Program

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. MILLER of Maryland. Mr. Speaker, the Congress has repeatedly voiced its interest in providing means by which in proper cases veterans can be assisted in promptly securing homes for themselves and their families.

However, a situation has developed that has had a serious effect upon many veterans and is producing inexcusable delays in the housing program.

The difficulty is not occasioned by faults in the legislation but in the way in which it is administered.

The VA has quite properly adopted a policy of reserving direct loans for the cases which are sound but where for some reason or another, the veteran is unable to secure the necessary credit from private institutions. To facilitate this approach an organization of private lenders has been established under the name Voluntary Credit Home Mortgage Program, and through it, applications are channeled to be accepted or rejected by private lenders within a reasonable period. If the application is rejected by VCHMP, it then becomes eligible for consideration for a direct VA loan.

So far the procedure works reasonably well. The catch is that after a loan is accepted by VCHMP and is therefore ineligible for a direct loan, all too frequently action bogs down for long periods and months elapse before the loan is processed and available. Often the veteran and his contractor are placed in a frustrating and damaging position. This is particularly apt to occur in rural areas such as the district I represent. They cannot secure a direct loan, yet the guaranteed private loan is not forthcoming.

An examination of the records of a single real estate broker on the Eastern Shore of Maryland indicates that, at the present time, he has 18 purchases by veterans awaiting financing or which have been settled in the last 30 days. Of that 18, it took 12 months and 11 days to settle 1; it took 9 months and 21 days to settle 1; it took 7 months and 6 days to settle 1; it took 8 months and 14 days to settle 2; it took slightly over 9 months to settle 1, and of the ones unsettled, 4 have been approved more than 5 months ago with no apparent settlement date in sight, and 3 others have been in progress for at least 9 months.

An examination of the records of a local builder indicates that of 9 cases on which applications have been approved 4 are not yet settled, the applications on those having been approved in January of 1956 and in February of 1956. Of the ones which have been settled, there is an average of approximately 6 months' delay. This situation exists with all persons dealing with the veterans' mortgage field in this area.

These two examples are the result of a personal spot check and there are doubtless many similar situations.

As the result of the delay, two unfortunate situations are developing. First, the veteran is being seriously deprived of his ability to purchase a home, and in some instances where the seller has become dissatisfied, has been unable to make the necessary purchase at all. In some instances the veteran is obliged to pay rent for which he does not receive credit on his purchase price between the time he occupies the house after completion and the 7, 8, or 9 months in which he awaits a permanent financing. The second undesirable effect is the serious deterrent which there is to business in the construction industry generally, with the net effect that new starts are being seriously impeded and business activity generally is suffering.

I hope this state of affairs can be corrected administratively. If not, I trust appropriative legislation will be considered at the outset of the next session of Congress.

Farmers Union Favors Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 18, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert in the RECORD a portion of the National Farmers Union Washington newsletter pertaining to Hells Canyon dam.

The Farmers Union is one of the many national organizations interested in development of a federally owned high dam instead of the three dams proposed by a private power company.

Following is the text of the Farmers Union's newsletter dealing with Hells Canyon dam:

The Senate will vote within days on whether to authorize construction by the Federal Government of the high Hells Canyon Dam project in the Snake River between Idaho and Oregon.

The Senate vote, which will follow several days of debate, may occur by Wednesday, July 18, or within a day or so.

Jim Patton, NFU president, has written to every member of the Senate and the House to urge them to vote for the project. Other Farmers Union State and local leaders throughout the country are similarly contacting their Congressmen by letter and telegram to vote for Hells Canyon.

This is the long-awaited test that may decide, once and for all, the fate of the Hells Canyon project.

The vote is expected to be extremely close. Every Senator's vote and presence on the floor may possibly be of deciding importance.

If the Senate O. K.'s Hells Canyon Dam, it is expected to come up for a vote in the House soon afterward.

Patton stressed the importance of Hells Canyon Dam to the production of low-cost phosphate fertilizer for farmers throughout the great region west of the Allegheny Mountains.

The Nation's biggest deposits of phosphate rock are located in the mountains near the Hells Canyon gorge. Cheap electricity from the dam is needed in order to process the rock into super-phosphate fertilizer. Without Hells Canyon Dam, there will not be enough electricity available at low enough cost to permit the production of cheap fertilizer.

Both the National Farmers Union and the Farmers Union Central Exchange own phosphate rock deposits which require low-cost electricity from the Hells Canyon power project for economical development. These and other farm cooperative fertilizer programs in the Hells Canyon area would save millions of dollars a year on the fertilizer bills of United States farmers.

The key to these savings for farmers is the vast quantity of low-cost electricity which would be produced by the Hells Canyon power project.

Electrical power produced at the dam would be wholesaled by the Federal Government, through Bonneville Power Authority, to locally owned REA co-ops, municipalities, and public utility districts, as well as to locally and absentee-owned private electric companies.

In contrast to this, the Eisenhower administration favors giving up the Hells Canyon Dam site to the absentee-owned Idaho Power Co., a Maine corporation which holds its meetings in Portland, Maine, and which is owned and totally controlled by eastern financial and utility holding company interests.

Idaho Power Co. proposes to build a small dam, and possibly two more small dams several years from now, in the stretch of river gorge that would be occupied by the big Federal project.

Even if all three Idaho power dams are built, they would produce only half as much electricity as the high Federal dam, and it would cost more than twice as much per kilowatt hour. The comparative vital statistics on the two projects follow:

	Federal high Hells Canyon Dam	Idaho Power Co. 3 dams
Useful water storage....acre-feet..	3,880,000	1,000,000
Initial installed capacity kilowatts..	800,000	783,400
Prime power at site.....do....	688,000	577,000
Prime power at other sites..do....	436,000	103,000
Total prime power.....do....	1,124,000	680,000
Cost of power per kilowatt-hour mills..	2.71	6.69

The Government's investment in the high dam project would, like all public power projects, be repaid to the Treasury, with interest, long before the end of its useful and revenue-earning life.

In contrast to this self-liquidating financial procedure under Federal development, the Idaho Power Co. has applied to the Government for subsidies which would total $325 million in value over a period of 50 years, and which would never be reimbursed to the Government nor passed on to users of electricity.

The power lobby has made the fight against Hells Canyon Dam a national issue, with private power companies throughout the Nation pouring huge amounts of money into political advertising and other efforts to beat the project. The huge interlocked network of power company operations owned by the same interests as own Idaho Power Co. have millions of electricity consumers to whom they pass on the cost of this fight.

Public Housing

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. FISHER. Mr. Speaker, since its inception public housing has degenerated from a welfare form of public assistance for a limited number of poor and unfortunate people, such as was envisioned by the late and lamented Senator Taft, to a program of state socialism. Under leave to extend my remarks, I include an article written in Human Events by Russell Turner. It deals objectively and accurately with some phases of socialized housing:

PAYING YOUR NEIGHBOR'S RENT—THE PUBLIC HOUSING PROGRAM

(By Russell Turner)

A long-time Republican Member of Congress from Pennsylvania named Robert Rich became famous around the Capital during the 1930's and 1940's for a simple question he invariably posed whenever a New Deal spending program was brought up for House consideration.

"Where are you going to get the money?" Rich's voice would boom out.

The question was appropriate during the many years he asked it. It is appropriate today in connection with many Government spending programs which now have come to be accepted as part of American life. It is peculiarly appropriate to the perennial wail of the liberal-left for public housing.

In all cases, of course, the answer to Rich's question is from you and me and all other American taxpayers.

In some cases, the expenditures are justified on grounds they are for the benefit of the entire nation, of all the taxpayers who contribute toward them. But in other cases, such as public housing, the expenditures amount to taxing all for the benefit of a few, no matter how their liberal advocates may seek to clothe them in the garb of "general welfare."

Taxpayers, throughout the country, have been contributing for 20 years to costs of the Tennessee Valley Authority program so that residents of that area might enjoy cheaper electricity. For almost as long, they have been contributing toward making possible cheap power rates to residents of the Pacific Northwest within range of the Bonneville power complex.

Public housing is an even more aggravated instance of unadulterated socialism having crept into our American life. This one directly penalizes the thrifty and the provident who own their own homes, with the penalty-tax payments being redistributed to the benefit of a selected few who for political or other reasons have been granted the privilege of an apartment in a public-housing project. Frequently, the recipients of this governmental largesse have more income than millions of those who ante up taxes to make possible that largesse.

Thanks to the commonsense of a majority of our national legislators, the public-housing program still is relatively small; taxpaying Americans are footing the bill for dwellings for a comparatively small number of their compatriots. It would not be so if the liberal left had its way.

Americans for Democratic Action is a self-styled liberal organization, numerically small but politically influential. Quite conceivably, it may succeed in its planned campaign to take over the Democratic national convention next month. The domestic policy statement adopted by this spring's ADA national convention shows clearly what will be in store in the housing field if liberals win control of the National Government:

"A progressive shift to public housing for lower-income families, because of its social urgency and to compensate for any saturation in the market for more expensive housing; coupled with an effective middle-income housing program backed by Federal credit.

"The housing goal is a proper dwelling in a suitable living environment for every American family, which requires an annual average of 2 million new homes for the next 10 years to replace slums and keep up with population growth."

Immediate socialization of all housing for lower-income groups, gradual repetition of the process for middle-income-bracket housing. Upper-income groups apparently are to continue providing their own homes, in addition to contributing substantially to those of the first two categories. To the trash heap goes the American theory of individuals earning their own living.

As a sociological goal, the ADA aim—"a proper dwelling in a suitable living environment for every American family"—is utopian. But ADA completely ignores the practical aspects—the regimentation inevitably attendant on any such program, the political implications bound to arise in assignment of choicest quarters, Mr. Rich's little question of how it is to be paid for.

Such mundane matters seemingly are beneath the dignity, and unworthy of consideration, of the lofty visionaries who make up ADA. Their entire policy statement, in fact, is devoted to items for which they say the Government should spend unspecified but vastly greater sums—public housing, a socialized medical system, increased public welfare grants, a food-stamp plan, direct subsidies to farmers, myriad other projects. This is coupled, of course, with a demand for sharp decreases in Federal income taxes on lower and middle income classes. Never a word about how to pay for any part of it.

Nor, in the case of public housing, is there any hint of how they would replace revenue lost to local governments when property to be used for public housing projects is taken off their local tax rolls. Apparently they would let stand the present system whereby tax rates on other property owners in the community are increased sufficiently to offset the deficit created by elimination of the public housing property from the tax rolls.

This means, of course, that the frugal and the thrifty who have had the fortitude and good sense to purchase their own homes, contribute twice toward the welfare of the less-provident who rent quarters in public housing projects: by direct taxes to pay for the projects; and by higher real estats levies to make up for the local taxes which the public housing projects would pay if they were privately owned, but being publicly owned, do not pay.

It is not just the ADA which is advocating this socialization of housing. The public housing lobby's roster is long and politically impressive; the AFL–CIO, for example, throws its entire weight behind the campaign.

It might, of course, be pertinent to inquire what the reaction would be among wage-earning union members with incomes of, say, less than $3,500 a year, to knowledge that their union organization is advocating a program whereby they would pay taxes to subsidize cut-rate housing facilities for a selected few families whose incomes may be $4,000, $5,000, or even more. Would they care for the idea?

The phrase "selected few families" is used advisedly. Most public housing projects are of a sufficiently attractive character, with rentals set far lower than if they were paying their own way, so that the demand for their apartments is many times greater than the available supply. In New York City, for example, where the city and State conduct supplemental programs in addition to the 8,000 units per year contracted for by the Federal Government, the total available supply now is about 30,000 new units a year. Close to 500,000 families have their names on the application rolls.

Inevitably, proven or promised political support can become a decisive factor in deciding which applicants will be accepted; and the projects can become a further means whereby those in control of Government can operate to perpetuate that control.

The basic theoretical purpose of public housing is to provide facilities for lower income families who have been living in slums or other substandard quarters. To carry out this intent, rents in public housing developments have no relation whatsoever to actual cost of the project. Instead, they are based on the individual tenant's income and his ability to pay. The general rule of thumb is that the rent shall be approximately 20 percent of the family's income, with the rent including all utilities.

As an example, a $20,800,000 public housing project known as the Christopher Columbus homes, with 1,556 units, was opened last August in Newark, N. J.; average cost per unit, $13,367. The project includes a health clinic, a library, hobby shops, an auditorium equipped for motion picture showings.

Louis Danzig, executive director of the Newark Housing Authority, proudly told newsmen that comparable privately owned apartments rented for at least $125 a month, whereas the average rental in his project (based on an average income per family of $200 a month) would be "$40 a month, with the rent charge including gas, electricity, heat, hot water, gas range and refrigerator."

"If that doesn't make our apartments a genuine bargain, I don't know what does," he said.

It certainly does—for the tenants. But what is it for the millions of taxpayers who must make up the difference between the $40 a month charged for the Christopher Columbus project apartments, and the close to $125 a month it actually costs to amortize and operate the project? Or for the Newark property owners who must make up for the taxes not being collected on this $20,800,000 project?

Equally as inherent in public housing as the political machine-building, is the constant specter of unwarranted and unwanted Government regulation of the private lives of residents.

In the article, This Was the House of Our Fathers, in the March 19, 1955, Human Events, James J. Kilpatrick told of the overzealous manager of a public housing project in the little town of Hopewell, Va., who decreed that in his project there should be no pet animals, no electric light bulbs larger than 60 watts, and no drinking whatsoever of any intoxicating liquors. The public furor was great, not only in Hopewell but around the country; the project manager beat a hasty retreat. Nevertheless, the power is there; equally noxious regulations can seep in gradually but inexorably to restrict the liberties and private lives of public housing tenants.

Because Congress has been persistently chary of undertaking any big-scale public housing program such as is sought by the liberal-left, there are only about 450,000 such units in existence or in stages of being under contract, going back to the days when the first public housing program was started as a public works project back in 1934. For these units, Congress now is appropriating approximately $87 million a year as the Federal contribution to their amortization and operation—contributions which are to extend over 40 years, putting the ultimate to-

tal cost of Federal taxpayers well up in the billions of dollars.

Public housing projects make token in lieu of taxes payments to the local community, but they do not even come close to the amount that would be paid on the project if it were privately owned. Estimates of amounts lost to local governments because of this nontaxability of public housing range up to half the Federal subsidy, or in excess of $40 million annually; a sum which must be made up by residents of the community not privileged to enjoy the Federal bounty.

Many communities, as a matter of fact, have affirmatively turned down proposed public housing projects when they learn what the projects will cost in the form of lost taxes and direct outlays. Disregarding impassioned pleas of lefties, plebiscites of voters have resulted in their rejection in community after community.

Despite the lack of congressional enthusiasm, the liberals are expanding their public housing demands rather than backing down. The middle-income program is a development of recent years; of even more recent vintage is a growing demand for a special housing program to care for persons over 60 years of age, known facetiously as the Townsend housing plan. Thus, the housing bill pending in Congress makes special provision for liberalization of Federal Housing Administration credit terms for elderly persons, for their acceptance in public housing projects, and for construction of 10,000 public housing units a year especially designed for them. A vote-buying bonanza for the demagogs; after this, will come the extravaganza of vote-luring promises of the better free life for the aged. As always, no mention of the slight items of answering Mr. Rich's question.

Probably the most effective, and undoubtedly the most outspoken opponent of public housing is the National Association of Real Estate Boards. Liberals rant that the NAREB typifies the mossback reactionary hatred for all social progress.

But is socialized housing progress? It it progress to tax all, even prudent and thrifty low income earners, for the benefit of the few, including the improvident and the spendthrift? Is it progress to abandon the free enterprise American way of life which many believe has served this country well throughout its history?

The liberals pooh-pooh, and brush aside as irrelevant, the fact that the NAREB has its own plan for eliminating slums and generally improving the presently-substandard housing available to lower income groups. Operated in conjunction with other groups such as the National Association of Home Builders, the plan is carried out by private enterprise in cooperation with local authorities and already has proven highly successful in many cities.

It is patterned after amazingly effective clean-up campaigns which were conducted in Baltimore, Md., and Charlotte, N. C. It is simple, but requires the hearty support of local civic organizations possessing a sincere desire to accomplish the job.

The ingredients are first, an intense campaign to compel compliance with local health and building codes (preceded by adoption of effective and adequate codes, if they are not already included in local ordinances); and secondly, a campaign to make slum and substandard dwelling owners realize that they will be aiding not only their tenants but themselves as well, if they will rehabilitate and modernize their properties. It has been effective in many cities; it can be made effective in others.

Widely known as the Baltimore plan after its first successful operation in a major city, this is private enterprise's answer to the public housing lobby. It is an effective answer; it can, and must, be made to work.

The alternative may well be expansion of the doctrine of taxing all for the benefit of the few.

Fancy Footwork on the Washington Post and Times Herald—No. 2. Republican Senators and Lack of Leadership by the President Responsible for Destroying Cultural Exchange Program

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, in the report, No. 2580, filed by the Appropriations Committee of the Senate to accompany the supplemental appropriation bill, 1957, H. R. 12138, this language occurs:

With respect to the sum recommended for expenditure by the State Department the committee disapproves the use of funds for jazz bands, ballet and dance groups and similar activities, and strongly urges that greater emphasis be placed in sponsoring choral groups and miscellaneous sports projects. The effectiveness of some of the musical groups heretofore sponsored appears questionable.

In addition to this limiting, nay, strangling, action the Senate Appropriations Committee cut the appropriation requested for the President's Emergency Fund from $2.5 million to $1.5 million. The Washington Post and Times Herald makes this comment editorially this morning, Thursday, July 19:

ART FOR EXPORT

The Senate Appropriations Committee has added insult to injury in dealing with the State Department's overseas cultural program. The injury took the form of cutting the program's appropriation from the $2.5 million requested to $1.5 million. The insult was contained in a paragraph of the committee's report which declared: "The committee disapproves the use of funds for jazz bands, ballet and dance groups, and similar activities, and strongly urges that greater emphasis be placed in sponsoring choral groups and miscellaneous sports projects."

Leaving entirely out of account the impropriety of this sort of legislative assumption of administrative responsibility, the committee's view seems to us a sadly mistaken one on esthetic and pragmatic grounds. Dizzy Gillespie's band may seem to produce nothing but pure noise to Senator ELLENDER, who led the attack on jazz in the committee; but the fact of the matter is that all over Europe, the Middle East, and the Far East crowds flocked to hear the Gillespie group. Similarly, Louis Armstrong, playing a type of music which might not be appealing to Senator ELLENDER, was hailed as genius by audiences all over the European continent.

Jazz music is a peculiarly American art form. As such, it has special interest for Europeans and constitutes a distinctive American contribution. It has won the flattery of extensive imitation abroad; but few if any of its alien imitators has ever matched the Gillespies and Armstrongs—or a host of other American band leaders—in quality or in popularity. Whether Senator ELLENDER appreciates it or not, American jazz orchestras have made friends abroad who could not have been won by any form of propaganda.

The United States has given hospitality to some of the great ballet corps exiled from totalitarian lands; as a result ballet under American sponsorship has a special significance to Europeans. To cut this art form out of a cultural program would be to deprive this country of one of its real assets. Choral groups are all very well, and it is nice to know that Senator ELLENDER likes them; but people abroad seem to have plenty of choral groups of their own. As for miscellaneous sports projects, it is hard to see how they contribute to a cultural program designed to demonstrate that the United States is a free society where the arts are fostered and flourish.

Now, Senator MCNAMARA, in an important speech on the floor of the Senate on Wednesday, July 18, which was reported by the Washington Star yesterday, had some things to say about the Washington Post and Times Herald and the way it reports, or, I should say, fails to report all the news that is fit to print.

I am disappointed—

Said Senator MCNAMARA—

that another great newspaper perhaps has not been so forthright as either John Knight of the Detroit Free Press or Mr. Reston of the New York Times. I refer to the Washington Post and Times Herald.

It is my painful duty today to call to the attention of my colleagues the way the Washington Post and Times Herald reported the action of the Senate Appropriations Committee. For the sake of the record I include the article from the news section of the Washington Post and Times Herald this morning:

JAZZ MISSING BEAT ABROAD, SENATE SQUARES SAY, BUT NOBODY WAS LOOKING AT THE WASHING MACHINE

(By Paul Hume)

American jazz will suffer some real licks if the Senate Appropriations Committee has its way on what this country sends abroad.

A report of this committee reads: "The committee disapproves the use of funds for jazz bands, ballet and dance groups, and similar activities, and strongly urges that greater emphasis be placed in sponsoring choral groups and miscellaneous sports projects."

This report accompanies the supplemental appropriations bill which was approved by the Senate last Tuesday. Opposition to sending jazz musicians overseas was voiced by Senator ALLEN J. ELLENDER, Democrat, of Louisiana, who said, after hearing Dizzy Gillespie's band, "I never heard so much pure noise in my life."

Last spring the Government spent $92,500 to help make possible a tour in which Gillespie and his band played in eight Middle Eastern and Balkan countries. According to a report of July 14 in the Saturday Review, Gillespie's tour was a complete and unqualified triumph for jazz, for American jazzmen, and for democratic ideas by this band during its travels.

Theodore C. Streibert, director of the United States Information Agency and coordinator of the international program, said he heard only one criticism of the Gillespie tour: People had difficulty getting in to hear the band because the response to its playing was so tremendous.

As the appropriation now stands, the State Department's share of funds for overseas music is a million dollars less than last year, while the Commerce Department has been granted an increase of $3 million in order to carry out an extensive program of trade shows. Regarding these shows, Representative JOHN J. ROONEY, Democrat of New York, said that he visited a trade fair in Europe where American machinery was on display.

"Nobody was looking at the washing machines," he said. "They were all standing

around a juke box made in Chicago listening to dance bands."

The Senators from Louisiana, one of the great sources of jazz, the brand known as Dixieland, do not share similar views on the subject. A recent radio program called Guest Conductor, which featured the favorite music of the junior Senator from Louisiana, RUSSELL B. LONG, closed with two of LONG'S favorite samples of New Orleans jazz: When the Saints Go Marching In and Tailgate Ramble.

American musicians, returning from both brief and extended tours abroad, universally report that the greatest interest overseas is in our jazz. A prominent Washington musician, just back from a year's study in Belgium on a Fulbright grant, said, concerning American choral groups touring Europe, "The people over there are just not interested in choral music."

The bill, of which the controversial supplemental report is a part, is H. R. 12138. It is now due to go into conference where jazz has one final chance of getting back into the act. House Members who, it is suggested, are perhaps younger and livelier than their Senate colleagues, are hoping to get the big beat back into the bill.

This report, and the editorial as well, completely overlooks the fact that there are 11 Republican members of the Senate Appropriations Committee. What were they doing when the appropriation for the President's Emergency Fund was under consideration?

Senator KARL F. MUNDT is on the committee. He is one of the authors of the Smith-Mundt Act which, with the Fulbright Act, is basic legislation in the field of cultural exchange.

Senator WILLIAM F. KNOWLAND, a member of the Appropriations Committee, is spokesman for the administration in the Senate. Everyone is familiar with President Eisenhower's numerous statements in support of cultural exchange programs in general and this Emergency Fund in particular. Certainly Senator KNOWLAND, who is so close to President Eisenhower, knows how he feels about this matter of sending performing artists overseas. He must know that the President initiated this Emergency Fund in July 1954 and that the Congress appropriated $5 million for it in 1954 and in 1955. The fact that the Senate on March 26, 1956, adopted S. 3116, a measure to make the President's Emergency Fund permanent, could not have escaped the attention of Senator KNOWLAND or any of the other Republican members of the Senate Appropriations Committee. They also must have been aware that the top officials of the Eisenhower administration have supported this very small $5 million fund before the various committees of the Congress.

I might add that my own interest in this matter is based on legislation which I cosponsored with Senator HUBERT H. HUMPHREY, of Minnesota.

Now the point I want to make here is that the Washington Post and Times Herald this morning completely fails to mention the Republican Senators who are members of the Senate Appropriations Committee. Did they sit stolidly by when the President's fund was under consideration? Did they defend the program? How did they vote? Or were they absent? These things the Washington Post article does not go into.

Senator ELLENDER is mentioned both in the editorial and in the news article as the man who, it is said, led the attack on jazz in the committee. It seems to me that Senator ELLENDER or anyone else can like or not like jazz. Personally, I think it is a great art form, perhaps our very greatest art form, native to this country, completely democratic, telling our story as no amount of symphony orchestras can tell it by playing the music of the classical composers of Europe.

Senator ELLENDER has every right to oppose the appropriation of funds to send jazz bands abroad where they have been hailed as our finest export. He has the right to be wrong, and he is terribly wrong in this instance, I feel. Surely, too, the other Senators on the Appropriations Committee can vote their convictions. But I must point out that the Senate without a single dissenting vote, and without any discussion, adopted S. 3116, a bill to make this program permanent in its present form and without the modifying and limiting language of the Senate Appropriations Committee. It seems to me extremely unlikely that anything has happened since March 26, 1956, to have caused the Senate to accept the recommendation of the Senate Appropriations Committee on this important program without question. Nor do I yield to the suggestion that has been made that the other Chamber has grown unsteady, or unstable.

Surely, however, the action of the Senate Appropriations Committee and of the Senate itself on this matter raises some very interesting questions, in view of its action in adopting S. 3116 a few short weeks ago.

And one of these questions, certainly, is: Where were the Republican members of the Senate Appropriations Committee when this program was under consideration? Why did not they, or at least some of them, defend the program? They could certainly have outvoted Senator ELLENDER who is, after all, only 1 Senator and has only 1 vote in the committee.

Another thing. Why did not the Washington Post and Times Herald, in reporting this story, tell us what the Republican Senators were doing at the time? Could it be that this newspaper was printing only that part of the news that fits its special prejudices as has happened before? Was the Washington Post and Times Herald playing partisan politics?

What about the vaunted leadership of the President? Why was it not in evidence in support of his own program? If it was in evidence, did the Republican Senators on the committee and in the Senate vote against the program despite the President?

The Washington Post and Times Herald should try again and this time it should give us all of the story.

Agricultural Research To Increase Income of Farmers

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1956

Mr. BEAMER. Mr. Speaker, a statement was presented to the House Agriculture Committee in explanation of certain bills that I introduced in behalf of the farmers and agriculture in general.

Under unanimous consent, this statement is included in the Appendix of the RECORD:

AGRICULTURAL RESEARCH TO INCREASE INCOME OF FARMERS

(By JOHN V. BEAMER, Member of Congress)

I appreciate the opportunity of appearing before your committee in behalf of H. R. 10148, a bill to provide for a scientific study and research program for the purpose of developing increased and additional industrial uses of agricultural products so as to reduce surpluses of such products and to increase the income of farmers, and for other purposes.

My interest in agriculture stems from many sources. First of all, I was born and raised on a farm and agriculture continues to be my personal main source of revenue and income. I also have the privilege to represent the Fifth Indiana Congressional District which boasts of some of the best farmlands in the United States. Real estate is at an alltime high in this area and farmers and all business dependent upon agriculture continue to express a keen interest in the welfare of agriculture.

It has been possible for me to meet with many farmers and small-business men and by means of these visits, questionnaires, and exchange of letters, I feel confident that all the people in our part of the State are keenly interested in this type of legislation.

Early this year I introduced H. R. 8586, a bill to amend the Internal Revenue Code of 1954 to relieve farmers from the excise tax on gasoline and lubricating oils used exclusively in farm tractors or farm machinery and for other agricultural purposes. The principles involved in this bill are incorporated in Public Law 466.

I also introduced H. R. 10742, a bill to provide for the protection and conservation of national soil, water, and forest resources and to provide an adequate, balanced, and orderly flow of agricultural commodities in interstate and foreign commerce, and for other purposes. A similar bill, H. R. 10875, which authorizes $1.2 billion for a voluntary soil-bank program to reduce production acreage of crops in surplus supply, fixes feed grain supports at 76 percent, and encourages disposal of surpluses at home and abroad, was passed by the Congress and now is Public Law 540.

All of these measures and numerous other worthwhile attempts on the part of the 83d and 84th Congresses to be of assistance to the farmer are appreciated and are recognized as necessary for reasonably immediate benefits.

However, it is felt that the future of agriculture must be a long-range program. The rapid rate of growth of our population, the changing tempo of the times, the remarkable discoveries and uses of new products, marketing conditions, and similar subjects, pre-

sent the greatest challenge to this segment of the economy.

It seems to be entirely in line with traditional American initiative to endeavor to study new approaches and new methods for any problem that presents itself. For example, private industries are constantly employing research in order to improve their products, to build up consumer acceptance, and to create new markets.

The agricultural colleges, the United States Department of Agriculture, and various private and public institutions have made it possible for the farmers of this country to produce more and more of their products with fewer people and in less time. The modern tractors have replaced the horses in the same manner that hybrid corn with its increased yields, for example, has replaced the open-pollinated corn of former years. The farmer has proven that he can produce both quality and quantity to meet any emergency that might arise.

However, after an emergency such as the recent wars has passed, the farmer has found himself with this high productive capacity that exceeded the demand for his goods. The idea of raising demand to meet production instead of pulling down production to meet demand is the course that has made this Nation great.

The potentialities for research for new uses of agricultural products are almost unlimited. The purposes of this bill and other bills of a similar nature which have been introduced is to increase scientific research by the use of Federal money.

It seems to me and to farmers with whom I have talked that a reduction in output in the long run would not help the farmer and might confront the Nation with a shortage in a sudden emergency. This program if brought to a successful fruition would permit the farmer to produce perhaps in greater quantity because the market would not only be adjusted but also be trained and educated to use more and more of these agricultural products.

The specific suggestion in the bill is that research facilities both private and public, including those of land-grant colleges and universities, should be used for an all-out attack on the developments of increased and additional industrial uses of agricultural products. This is a research program that would not cost a great sum of money comparatively speaking and one which would be more than offset by increased revenues resulting from increased earnings of both farmers and those who sell goods, wares, and merchandise to farmers. It also would help to eliminate the expensive and burdensome cost to the Government for its present surplus-storage program.

Briefly, the bill would create in the executive branch of the Government an Industrial Agricultural Products Administration. This Administration would be appointed by the President with the advice and consent of the Senate. Their duties would be to conduct research of various types, make tests, maintain and operate pilot plants whenever necessary, and to maintain and expand such facilities that would enable the research program to secure the necessary results.

Another provision would authorize this Administration to pay certain incentive awards to private citizens for studies in research marketing and other phases of agricultural work. Grants would also be made to accredited colleges and universities and fellowships and scholarships for research for the purposes of this act.

There are many other minor phases of this program but the entire purpose is to make possible a means of finding more uses for the farmers' goods and to create a large market and provide a ready acceptance for improved agricultural products resulting from such studies.

It is recommended that the sum of $100 million be appropriated for this specific study in order to initiate this program. It is felt that this type of research for the farmer will result in the correction of a fundamental error in the philosophy of helping agriculture. Instead of reducing production and instead of creating a scarcity, it then will be possible for the farmer and the manufacturer of agricultural products to increase production because there will be an increased demand for their goods.

Free Enterprise

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an article written by Mr. Denison Kitchel, one of the most able lawyers in Arizona. I believe that this article should be brought to the attention of the entire Nation:

I am honored to be a guest of the Free Enterprise Council. Almost everyone, including myself, professes to be in favor of free enterprise.

It's like being against sin. Everyone is against sin, but few are sinless. Almost everyone is for free enterprise, but few are not guilty of inconsistencies which can ultimately destroy the free enterprise system.

How many of us really know what we mean by free enterprise?

How many of us can identify a socialistic scheme when it is disguised as something else?

The answers to these questions reveal the gravest internal threat which faces our Nation today.

Those of us who believe in the American way of life have taken it for granted for so long that we are unable to practice and preach consistently what we believe. Unwittingly, we even support some of the carefully planted schemes of the Socialists.

Let's look at ourselves for a few moments, whether we be advocates of free enterprise as businessmen, labor leaders, farmers, educators, or job holders.

The businessman cries out against high taxes. The cost of supporting big Government, he says, is preventing the expansion of our industrial economy. He deplores compulsory unionism. Every person, he says, should have the right to work without paying tribute.

Well spoken.

But while he is pontificating on this score, this same businessman is demanding and receiving Government subsidies in various forms. He clamors for "cheap" Federal power. He promotes the establishment of Federal "projects" in his business area. He seeks more and bigger purchase contracts from the Federal Government. Being afraid of union retaliation, he ignores the right-to-work law and connives with labor leaders to deny employment to those who do not belong to a union.

Take the labor leader. He inveighs against the evils of business monopoly. Big business, he says, is destroying competition—the antitrust laws must be more vigorously enforced. He deplores encroachments on the liberties of the individual. There must, he says, be no discrimination—all men are created free and equal.

Well spoken.

But at the same time this same labor leader, in the exercise of his uncurbed power, is threatening our economy with industrywide strikes and other monopolistic practices. And he insists that nobody shall earn a living without first joining his union and paying compulsory tribute to him.

Look at the farmer. He deplores the monopolistic practices of both labor and industry. By virtue of their abandonment of the free-enterprise system, he says, they have caught him in a squeeze of high costs and low prices.

He deplores the loss by others of the rugged individualism which, he says, has made the farmer the backbone of the Nation.

Well spoken.

But in the same breath this same farmer is demanding price supports from the Federal Government.

What about you and me?

All we ask is the opportunity for a decent job with a reasonable chance for advancement. Leave us alone, we say; let us work and play as we see fit.

Well spoken.

But at the same time we, too, are supporting schemes of the Socialists. Give us "social security," we say; protect us, beneficent Government, from any discomfort which may befall us.

How, in the light of all of these inconsistencies, can anyone tell what we stand for?

Are we for the free-enterprise system or against it?

If we ourselves don't know, we are ripe for the social planners. They know exactly where they stand and where they hope to lead us. They, at least, are always consistent.

The time has come when each of us must stand up and be counted.

Are we going to lead or be led?

If we can practice what we preach, we shall lead.

Three Hundred and Eighty Jets Warn Public of Secret Move

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. BENTLEY, Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the July 15 edition of the Sunday Detroit Times by William Randolph Hearst, Jr., entitled "Three Hundred and Eighty Jets":

THREE HUNDRED AND EIGHTY JETS WARN PUBLIC TO PROTEST SECRET MOVE

(By William Randolph Hearst, Jr.)

Hold your hats, everybody.

If you've been unhappy over the news that the administration still insists on sending aid to Tito despite his big kiss-and-make-up scene with the Kremlin, get ready for a real shocker—

Good old Uncle Sam plans to make available about 380 jet planes to the man who recently stood by without saying a word in contradiction when Marshal Zhukov declared "Russia and Yugoslavia would march shoulder to shoulder" in any future war.

This is the big story of last week's secret meeting between congressional leaders and Government spokesmen on the red-hot po-

litical subject of additional American aid to Communist dictator.

Senators and Representatives sat aghast as it slowly dawned on them that this new United States assistance to Yugoslavia contemplates the dispatch of modern jet aircraft. In fact, some have already gone.

AROUSED PUBLIC PROTEST NEEDED

The rest will eventually find their way to the Balkans—unless an aroused public protest and congressional opposition stymies the deal—without any guarantee that some day they might not be turned against America.

This despite the fact that some of our own National Guard units don't have the jet planes they need.

I have learned these facts from excellent sources, from people in a position to know what transpired at last week's huddle between Secretary Dulles and Members of Congress' Armed Forces Committees.

Yugoslavia has received well over $1 billion in economic and military aid from the United States since 1948.

ADMINISTRATION FAILS TO SHOW PROOF

The administration has failed to prove its case in asking that further funds should be voted for this so-called neutral nation whose Communist dictator has become publicly reconciled with Russia's rulers.

It made sense to show up Tito while he continued to be an ulcer in Stalin's flank, but this realistic if unpleasant approach became outdated the moment Khrushchev embraced Tito again with no apparent protest from the Yugoslavian dictator.

Secretary Dulles is asking for "freedom of action in a sensitive area." This skilled statesman should realize that the granting of further aid to Tito in the face of his reconciliation with Moscow is bound to have serious repercussions among our allies and the so-called uncommitted nations.

GIVES A BOOST TO NEUTRALISM

Neutralism will be encouraged as a paying proposition, our allies will wonder if Uncle Sam is more concerned about placating the neutrals than about the continuation of their friendship.

Let's stop this spending of American taxpayers' money, some place—some time. Why not now—and in Yugoslavia?

IKE'S POSITION

Ike runs again: The casual disclosure that President Eisenhower will seek reelection came as no surprise to the overwhelming majority of Americans, who all along accepted the medical verdict of the foremost physicians in the country that his stomach ailment would not incapacitate him for a second term.

Right until the last, however, certain columnists and commentators sought to maintain and artificial tension over the situation, trying to create a suspense that actually never existed.

It is quite apparent now that Ike viewed his present illness as a temporary stomach disorder, and did not place it in the same category as his heart attack of last September.

The moment he felt his recovery had reached the proper stage, he passed the word along to his chief lieutenants.

POLITICAL JUDGMENT

And the President showed shrewd political judgment in arranging that Senator KNOWLAND would be the one to make the first announcement.

Ike and the strong-minded California Senator have not always seen eye to eye on some projects, so it was sound strategy to indicate to the voters that they were united on the subject of the President's reelection.

As long ago as January 1, 1956, your favorite editor went out on a limb with a flat prediction, based on some solid inside information, that the Republican ticket in 1956 would be Eisenhower and NIXON again. Now I feel calmer.

Alcoholic ward: Comrade Khrushchev is quite a character. If he is not denouncing the murderer Stalin who made him what he is today, he is publicly losing his temper or getting boisterously drunk at some diplomatic function.

THE LATEST INSTANCE

The latest instance of Khrushchev's vodka venom (at the Moscow aviation day party) might well cost him his job as one of the top men in the Communist hierarchy.

According to the reports, Khrushchev got so loaded at the lawn party that he engaged in a shouting argument with Premier Bulganin, who also appears to have a weakness for vodka.

He insulted Nigel Birch, British air minister, and then made some far-from-diplomatic remarks to other foreign airmen about the methods and accomplishments of their countries.

So embarrassed was Marshal Zhukov, the Soviet defense minister and wartime hero of the Red army, he personally apologized to his Western guests.

Now, whether this sort of situation will lead to the political purging of Khrushchev remains to be seen. The possibility cannot, of course, be excluded.

I DON'T THINK SO

Following our trip to London last April to cover the visit of Khrushchev and Bulganin, I was invited to address the International trade fair in Seattle. In the course of that speech I made the following comment:

"To me, a very significant aspect of the Communist leaders' visit to Britain was Khrushchev's bad temper.

"He lost it at the Birmingham industrial fair, speaking before the completely respectful audience of industrialists. He threatened them and the free world with mass destruction through the use of already developed guided missiles.

"He got away a little with his drunkenness and antics in Yugoslavia and he was quite successful with his lamp-for-a-hat trick in India.

"(But) drinking and losing his temper may have a great deal more significance than appears on the surface today."

Again in the Editor's report of May 27, I wrote:

"It would not surprise me at all if the unbelievably bad show he put on in England might not be the cause of his receding some in power in their top ruling group—the presidium."

Whether Khrushchev can be unseated depends, of course, on how much power he possesses.

As first secretary of the party, he controls the political machine with its 6,000,000 members. Malenkov did not have this political power when he lost his job.

Nor, obviously, did he have the support of the army, the other major instrument of power in the Soviet Union today.

Whether he can behave like a Tartar and continue to maintain his position as one of Russia's top rulers is questionable.

I don't think so.

Transocean Air Lines

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1956

Mr. MILLER of California. Mr. Speaker, on several occasions I have made comments concerning Transocean Air Lines which has its principal offices in my district in Oakland, Calif., and the entire business, civic, and social community in the Oakland Bay area is very proud of the accomplishments of Transocean, its affiliates, and their more than 2,500 employees.

I have just recently visited with my good friends at Transocean and I was extremely pleased to see how this young and vigorous great company continues to develop and make increasing important contributions to the national defense and overall public interest through its air transport and affiliated aeronautical enterprises.

However, I continue to be puzzled by the failure of the Civil Aeronautics Board and the President to grant even a temporary certificate of convenience and necessity or appropriate long-term exemption to this great company, authorizing the provision of nonsubsidized passenger and property services, despite the participation of the company in a number of costly CAB proceedings. For the convenience of the Members, I cite below a list of Transocean's applications before the CAB, the disposition of determined applications, and the status of pending applications:

LIST AND DESCRIPTION OF CAB APPLICATIONS OF TRANSOCEAN AIR LINES

Docket No. 2379: June 1946 application for special services. No action and application terminated upon institution of proceedings in Large Irregular Investigation, Docket No. 5132.

Docket No. 2537 et al.: Pacific Northwest-Hawaii Case. Application for scheduled services denied.

Docket No. 3041 et al.: Transatlantic Cargo Case. Application for transatlantic cargo service denied.

Docket No. 3041 et al.: Reopened Transatlantic Cargo Case. Application of Seaboard & Western granted, and Transocean's application denied.

Docket No. 5582 et al.: West Coast-Hawaii Case. Transocean's application denied.

Docket No. 5031 et al.: Transpacific Certificate Renewal Case. Examiner recommended temporary certificate to Transocean for carriage of persons and property only in the transpacifc area; but the Board by a 3 to 2 vote did not adopt the examiner's recommendation. Thereafter, the Board by a split of 2 to 2 vote denied Transocean's reconsideration petition, despite a concession of substantial error in original opinion, and without retransmitting to the President in light of such error, although one member urged that such retransmittal be made.

Docket No. 5132 et al.: Irregular Carrier Investigation. Granted supplemental authority of persons and property in domestic and overseas air transportation but denied supplemental authority for carriage of persons in foreign air transportation on a limited basis. The acquisition of the latter authority has been the 10-year quest of Transocean.

Docket No. 7300: Application for exemption for authority to engage in transportation of persons and property (charter and special services) between points in the United States and between points in the United States and overseas and foreign points. No action by CAB.

I am particularly concerned and grieved by the failure of the Board in the Transpacific Certificate Renewal Case to sustain the recommendation of an able and experienced assistant chief examiner of the CAB to grant a temporary certificate to Transocean to pro-

vide nonsubsidized, nonscheduled, irregular transportation by air of persons and property only in the transpacific areas. I am sure that it will be of interest to my colleagues to note that the adverse decision of the CAB and the President was on the basis of an adverse 3–2 vote within the CAB. The two Democratic members of the Board, Col. J. P. Adams and former Senator Josh Lee, filed a vigorous dissenting opinion urging that the Board and the President adopt the examiner's recommendation. It is of further interest that when the decision was affirmed by the President, one of the adverse voters, Hon. Oswald Ryan, had failed of reappointment to the Board. Transocean petitioned for reconsideration of the adverse decision but was turned down by a 2–2 vote of the Board and without sending the matter to the President despite the fact that the two adverse members admitted in the reconsideration order that certain errors had been made in the original majority decision in which the examiner's recommendation for certification of Transocean was not adopted.

It should be emphasized that the dedicated and prime objective of Transocean throughout its more than 10 years of operation has been to restrict itself to the providing of supplemental passenger and property air transport services in overseas and foreign areas. It should also be pointed out Transocean has religiously lived within the restrictive CAB regulations applicable to nonscheduled air carriers; and that no complaint by anyone has ever been filed against Transocean with respect to alleged violations of the Board's regulations.

By its decision with respect to Transocean in the Transpacific Certificate Renewal Case, the CAB has preserved, with the approval of the President, its dubious record of never having issued a route certificate to a new trunkline carrier in its 16-year history; and has throughout that period protected from new carrier competition the subsidized carriers which were blanketed in under the grandfather provisions of the Civil Aeronautics Act of 1938.

It is almost beyond belief that, in this Nation that was founded to give liberty, freedom and comprehensive opportunity to all, a monopolistic policy is to be maintained which bars new thinking, new blood and new enterprise in the dynamic aeronautical field, the newest product of man's ingenuity to protect and advance the rights of the whole people.

The abhorrence of this monopolistic policy in civil aviation is emphasized by the current trend of affairs in the Far East. It should be self-evident to the President and his advisers that the uncertainties in that area make more important than ever the preserving and strengthening of this Pacific area carrier which seeks to provide low cost commercial passenger and cargo service between the United States and the Orient without the payment of 1 cent of subsidy or mail pay and without causing the slightest increase in subsidy for the presently certificated and subsidized carriers.

The Civil Aeronautics Board has, among other things, in the past used as argument against certification of new carriers that such certification would divert traffic from carriers already certificated and would of necessity increase the subsidy needs of the presently certificated carriers. In reversing himself on the renewal of a certificate for Northwest Airlines between the Pacific Northwest and Honolulu, the President gave as his reason for such reversal that he had been advised by the Chairman of the CAB that within 2 years the Board believed that the entire subsidy would be eliminated from the Pacific runs. It would seem to follow that even if the limited certification of Transocean Air Lines were approved that there could be no increase in subsidy payments by reason of the admittedly insignificant diversion which such limited certification might inconceivably cause. In this connection, it is most interesting to note that the CAB is presently actively considering again permanent certification of Northwest's United States-Orient route and Pan American's United States-Orient Great Circle route application, with both carriers' primary contention being that the question of subsidy is no longer a factor in Pacific airline operations.

The perpetuation of monopoly and the continuation, in civil aviation, of a total lack of real freedom of entry is in strange contrast with the President's statement in his economic report of January 20, 1955:

> Government should persevere in its efforts to maintain easy entry into trade and industry, to check monopoly and preserve a competitive environment.

I am confident that the CAB under its new chairman, James R. Durfee, from that great progressive State of Wisconsin, will fittingly reward Transocean with early certification or appropriate long-term exemption for its great contributions to the air transport objectives of this country at home and throughout the world.

Certainly, such early authorization to Transocean would appear to be appropriate in light of Aviation Week's recent forecast of a $4 billion year for the world's airlines in 1957; and the fact that Transocean's supplemental nonsubsidized passenger and property operations would have infinitesimal, if any, adverse effect on the operations of any United States-flag carrier. I am hopeful that the CAB and the administration will fulfill its responsibility to the public, the national defense, and the commercial air transport industry generally by granting appropriate nonsubsidized passenger and property authorization to Transocean very soon. There is no doubt of Transocean's full ability to meet its high responsibilities under such authorization from our Government.

Adm. Arleigh Burke Receives Deserved Tribute

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1956

Mr. HOSMER. Mr. Speaker, Fulton Lewis, Jr., devoted his July 18 column to a well deserved tribute to the United States Navy's top commissioned officer, Adm. Arleigh Burke. It is a pleasure to call it to the attention of my colleagues. Following is the column as it appeared in the Los Angeles Examiner:

ADM. ARLEIGH BURKE 'NEW BREED OF BRASS'

(By Fulton Lewis, Jr.)

WASHINGTON, July 18.—Adm. Arleigh Albert Burke, the Navy's number one commissioned officer, is quietly gaining recognition as a new breed of brass.

He is instilling more confidence and respect among subordinate officers, especially juniors, than anyone else who has come along in some time. He is becoming known as a man who gets a job done and inspires others to help him do it.

Burke was only 53 when President Eisenhower dipped far down into the admirals' list 14 months ago to pluck him out for the vital post of Chief of Naval Operations. Typical of the seemingly routine but actually unusual steps to which Burke goes is a recent meeting he called of all commanders and captains attached to departmental headquarters here.

The meeting was held in the Interdepartmental Auditorium; an estimated 3,000 3- and 4-stripers showed up.

Burke began by telling his wondering audience that he had called the session because they were the men who in a few years would be running the Navy, and he thought they deserved a preview of the responsibilities they faced.

In ample detail, he outlined some of the problems and issues of administration, posed to officers of star rank. Ultimately he opened the meeting to questions. They were many and varied; he did his best to answer all.

BATTLE FOR CONVICTION

Finally came one that struck home. Suppose, asked one questioner, an officer sincerely and honestly has come to a conviction running counter to policy established by his superiors; should he bow to dictate with closed mouth or should he battle for his conviction?

Battle for it, came the answer, assuming it is honest and sincere; carry the battle to the highest levels available. But when a decision finally is reached by the highest authority, accept the decision and put into its effectuation as much energy as was put into the battle.

On this one he spoke from personal knowledge. In 1948, then Capt. Arleigh Burke was head of the research and promotional team set up by the Navy to put its case across to the public in the raging B–36 fight. Burke incurred the bitter enmity of many officers in the other services, some in the Navy itself.

In 1949, he was chosen by a Navy selection board for promotion to rear admiral. President Truman saw the name on the list, ordered it stricken. The late Adm. Forest

Sherman, then Chief of Naval Operations, led the so-called "revolt of the admirals" against such White House interference and ultimately Mr. Truman, backing down, sent his nomination along to the Senate.

EMPHASIZES NEED OF WIFE

He long has harbored another deep conviction that has raised his estimation among some officers, lowered it among a minority—that one of the most important attributes of a Navy officer is his wife. He reasons that a Navy officer must spend long periods away from home while on sea duty, and that an efficient officer must have confidence that his wife meanwhile is properly caring for finances, children, and their home; otherwise, extraneous worry about domestic matters will lower his efficiency in the Navy.

Death of Polish Workers Fails To Move Reds Here

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Syracuse Post Standard of July 13, pertaining to the recent tragic events in Poznan, Poland:

DEATH OF POLISH WORKERS FAILS TO MOVE REDS HERE

Two weeks have gone since the starved workers of Poznan, Poland, rose against their Communist oppressors.

Two weeks since the Reds turned rifles and machineguns on men who pleaded for freedom and bread, and shot them down in the streets.

Two weeks and not a single word from America's commies, who profess undying love and devotion for the working classes.

Two weeks and not a peep or murmur from the lunatic liberals and the professional bleeding hearts who are always quick enough to espouse a commie cause when the target is their own country.

Where are the signers of petitions for freedom for the traitor Rosenbergs?

Where are the framers of resolutions defending the Hisses and the Dexter Whites and the notorious Hollywood 10?

Where are the formers of committees for the defense of human liberties, the protection of the Constitution, and scores of other high-sounding names.

Are not human liberties behind the Iron Curtain important enough to stir even a ripple of concern?

Is not the slaughter of a hundred or more workers in the street worth at least one faint, little protest?

The silence is eloquent testimony that America's full-bellied Commies and their intellectual sycophants despise the workers and hold them in utter contempt.

But though these Polish workers have drawn not a word of praise for their fight for liberty nor evoked the slightest criticism for the brutality of the Communists from our professional lovers of the proletariat, their heroism will not be forgotten soon by freemen.

They proved that the spirit of freedom has not been crushed in their unhappy land by all the oppression dictated by Moscow.

Thus it has always been with Poland. In its 1,000-year history, the country has been overrun by invaders and partitioned time and again. It has had but few interludes of independence, but Polish life and culture have not been destroyed.

They live today and will continue to live, for Poznan's workers are but a small segment of a nation that puts liberty above life, a nation that has endured subjection but has never accepted it.

So, too, with the other captive peoples behind the Iron Curtain, the Lithuanians, Latvians, Estonians, Czechs, and East Germans.

The flame of freedom may burn low but the Communists have found that even by extermination of vast numbers of human beings they cannot put it out * * * even in Mother Russia, where there have recently been rumbles of revolt.

Resolution of Pulaski Club, of Phoenix, Ariz.

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to bring to the attention of the House a resolution adopted by the Pulaski Club, of Phoenix, Ariz. This resolution expresses the position of 5,000 Americans of Polish origin now residing in the State of Arizona. I would like to add my own personal expression of admiration to the brave people of Poland, particularly those of the city of Poznan.

The resolution follows:

1. That an appeal be addressed to the Government of the United States of America that it condemn in the strongest possible language this latest crime of the Communists, namely the murder of Polish youth and Polish workers in the city of Poznan, Poland, and that adequate additional action be taken to prevent a repetition of such acts of violence and the slaughter of innocent people.

2. That our heartfelt thanks and sincere appreciation be expressed to the Members of the Congress of the United States of America for their several resolutions of sympathy expressed on the floor of the Congress of the United States of America and included in the CONGRESSIONAL RECORD in the matter of the uprising of the workers of Poznan and their appeal for bread, but we do and must insist that this matter be brought up and relentlessly followed through in the forum of the United Nations.

3. That the President of the United States, the Honorable Dwight D. Eisenhower, hear sympathetically our united appeal that he use any and all means at his disposal to hasten the liberation of Poland from the oppressive yoke of Communist domination through free and unfettered elections, and the swiftest elimination of Russians from a free and independent Poland.

4. That we urge our representatives in the Congress of the United States of America that they join the rank and file and give their proven leadership to the grand crusade of freeing all the enslaved countries from behind the Iron Curtain, and to use their positions as our representatives to give heed and warning to all our countrymen to be ever watchful and on their guard against Communist agents and their dupes in our own midst.

5. We salute and express our admiration to our brothers and sisters in Poznan, the workers and the youth—for their fight for freedom and bread. We wish to express our sentiments of deepest sympathy to the families of the heroes of Poznan, who gave their last full measure of devotion, their life's blood, on the altar of a free and independent Poland.

6. To all Poles behind the Iron Curtain we send our regard and respect, together with the assurance that we shall not fail nor falter in helping them to right the wrongs of Yalta. With the help of God, Poland shall yet be free.

A Witness Rejects Her Chance

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial which appeared in the Philadelphia Inquirer of July 19, 1956:

A WITNESS REJECTS HER CHANCE

Gale Sondergaard had a wonderful opportunity, here in this city, to clear her record before the eyes of the American people. She chose to reject that opportunity, in her appearance before the House Un-American Activities Committee.

Six witnesses, including several other actors, had linked Miss Sondergaard with the Communist Party. The committee asked her to speak for herself. She could have said that she once was a Communist, and now regretted it. She could have denied the charges. But she refused to answer, invoking the fifth amendment.

Miss Sondergaard had an absolute legal right to invoke the fifth amendment. But the public has an equal right to draw its own conclusions from her action.

The House committee asked Miss Sondergaard whether she had contributed $20,000 to the Communist Party. Again she invoked the fifth amendment. And again the public can form its own judgment.

Miss Sondergaard was shown a photo of a Communist Party card with her name on it. She was asked once more whether she was a member. Again she had a choice of answers, but again she insisted on invoking the fifth amendment.

In the face of this record Miss Sondergaard can scarcely complain if she enjoys little popularity among Americans, save those who are either sympathetic to, or fooled by, the current campaign to lull people into believing that United States communism is "just another political party" and nothing to be concerned about.

The broader question raised by Miss Sondergaard's appearance is the attempt to suppress public protest against Communists by calling it "blacklisting." Under specific scrutiny by the committee is a pamphlet on "blacklisting" issued by the tax-exempt Fund for the Republic.

No one believes the Fund for the Republic is a Communist agency. But history has shown us two things:

First, that the most effective work done for communism in this country has been done not by Communists—but by well-meaning people who were fooled by Communists or used by them to further their objectives.

Second, that the Communists always have a handy arsenal of nasty names to use on their opponents. Anyone who dares to attack a Communist is called a Red baiter. Every effort by Congress to expose Communist operations has been called a "witch hunt." Now that Communists have had

their "day of reckoning" with the American people, the Reds call that "blacklisting."

The House inquiry will develop how far the Fund for the Republic may have played into Communist hands by its "blacklisting" pamphlet and other activities. But in the Sondergaard case alone the committee has shown bias in that pamphlet; how Miss Sondergaard was pictured as persecuted because her husband took the fifth amendment—with no mention of the fact that six witnesses testified under oath that she herself was a Communist, or that the committee had a Communist Party card bearing her name.

Communists, non-Communists, any of us, have a right to "take the fifth amendment." But as a New York court noted last week, those who aid Communist causes "perform a public act" and cannot expect to escape public objection to their conduct.

So with Miss Sondergaard. She had her chance to come clean before her fellow-countrymen. She rejected that opportunity. Let there be no more nonsense that she has been persecuted, harassed, or anything but judged by loyal Americans according to the company the House committee's records show that she kept.

Washington Star Praises Public Service of Congressman Jones of Alabama

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. ELLIOTT. Mr. Speaker, on yesterday the Evening Star, in its lead editorial, praised the public service of our colleague the gentleman from Alabama [Mr. JONES] as "exceptional" for his leadership in initiating the new long-range Federal building program for the Nation's Capital.

Under leave to extend my remarks, I include the editorial referred to:

LONG-OVERDUE PROGRAM

The General Services Administration, which drew up Washington's new long-range Federal building program, and Representative JONES, of Alabama, who initiated it, have performed an exceptional service to the Nation's Capital.

One of the program's dual goals is to complete permanent Federal buildings, long planned and long delayed, in the monumental Government area west of Capitol Hill. The other, with the availability of new, permanent office space, is to tear down, at last, the dozens of tempos which for years have marred the Federal landscape and provided intolerable working conditions for thousands of employees. Neither of these goals, as experience has proved, is attainable without an ambitious long-range program.

GSA is to be commended for making its new building locations "conform entirely" to plans of the National Capital Planning Commission. These plans strive to prevent undue concentrations of Federal employees, but also to continue development of this city as the Nation's Capital. The GSA plan would meet all the foreseeable housing needs of downtown agencies, and make unnecessary the Federal exodus to the suburbs which recently has reached alarming proportions.

It also is encouraging that GSA intends to ask the House and Senate Public Works Committees, before this session of Congress ends, to approve several lease-purchase projects for new Government buildings in the program. These projects make up the bulk of the program's 4-year "first stage." Committee endorsement now could substantially change the face of the Capital for the better by 1960.

How Tito Fooled the United States

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the July 20 edition of U. S. News & World Report by Robert Strausz-Hupé entitled "How Tito Fooled the United States":

HOW TITO FOOLED THE UNITED STATES

(By Robert Strausz-Hupé)

(What did United States really get for the billion dollars of aid it has given Tito? An expert on foreign affairs here concludes that:

(Tito used aid from United States effectively—to strengthen Communist grip on Yugoslavia.

(United States arms built up Yugoslav forces while Tito secretly negotiated with Russia. Thus he nullified hope of a Western bastion there.

(Dollars, poured in with Tito's promise of mass defections behind the Iron Curtain, actually produced nothing along that line.

(Tito outfoxed the West, really used United States support as a lever to get favorable reconciliation terms from Communist Russia.

(These are the conclusions of Robert Strausz-Hupé, authority on foreign relations and director of the Foreign Policy Research Institute of the University of Pennsylvania.)

During its brief history as an independent state, the Kingdom of Serbia played a small but lively part in European politics. Its successor state, Yugoslavia, owed its existence to the peace settlement of the First World War, imposed upon the Central Powers by the Anglo-American-French victory.

Between the wars Yugoslavia's principal claim to international importance rested upon her membership in the system of Balkan alliances devised by France as a barrier against German aggression in southeastern Europe. In those years Yugoslavia never played an independent role in world politics, any more than her predecessor Serbia had; her foreign policies were made in the capitals of the Great Powers, not in Belgrade. For a time during the First World War, after the victories of the Austro-Hungarian armies, Serbia even disappeared temporarily from the map; during the Second World War Yugoslavia was similarly blotted out by the might of Nazi Germany, and she owed her resurrection to the victory and diplomatic agreement of the Big Three.

Until 1948, Yugoslavia was noted—as far as she was noted at all—as one of the Soviet Union's most pliant satellites, and Yugoslav diplomatic conduct was known as the most stereotyped mimicry of Stalinist diplomatic conduct, replete with the standard invectives and provocations addressed to the Western Powers.

But by 1950, Yugoslavia had skyrocketed to a place of world political eminence, and very soon thereafter the resplendently uniformed figure of Marshal Tito became familiar on the highways of diplomacy, exchanging state visits with elected and hereditary rulers, including Nehru and other Asian leaders, the Queen of England, and the King and Queen of Greece. Yet the most startling development was the singular distinction bestowed upon Yugoslavia by the Soviets. For 7 years they had professed their irreconcilable enmity and abiding contempt for the defector; yet in 1955, before the incredulous eyes of the Belgrade diplomatic corps and a hundred international reporters, Marshal Tito received the affectionate accolade of the putative leaders of orthodox world communism, Khrushchev and Bulganin.

What miracle raised Yugoslavia from an historically uncertain and comparatively humble status as one among several Balkan States—of whom some others are as rich in manpower, industry, and natural resources—to the rank of an influential member of the world community, dealing on equal terms with the most formidable powers of the globe? For the United States—which did so much to bring the miracle to pass—this question can be rephrased as follows: Precisely where does the consummation of this amazing development leave the foreign policy and security interests of the United States?

It is not necessary here to retell the story of the Russian Yugoslav break. Long and searching historical studies of that event have been composed in several languages. The overt or publicly acknowledged issue in conflict can be gleaned quickly from the pages of Soviet and Yugoslav official publications—"white papers" that are principally concerned with points of Marxist-Leninist dogma. On this, the philosophical level, the disagreement appears to have centered on the Yugoslav Communist Party's rejection of Soviet centralism as a model of domestic administration and of Soviet imperialism as a model of interstate relationships within the Communist orbit.

Interpretations begin to differ and, because of the scantiness of documentary evidence, cannot help differing, when it comes to the importance of the philosophical issue in the actual conflict.

It has been pointed out that the Yugoslav Communist Party was surprisingly slow in acknowledging the charges hurled at it by Moscow; that the philosophical exchanges between Moscow and Belgrade appear contrived; and that, more important still, the Yugoslav Communist leaders—and, foremost among them, Tito—had been associated intimately for the better part of their adult lives with Soviet theory and practice and could never have been under any misapprehension as to the meaning of that theory and practice either for the world in general or for themselves and their local concerns in particular.

None of them had been earlier known to entertain deep convictions in regard to such a bourgeois conception as national independence, except when "national independence" could be turned into an issue that afforded an opportunity for Soviet intervention—as, for example, it could on the occasion of the Civil War in Spain, where Tito represented the Comintern.

Since the explanation of the break on theoretical or philosophical grounds involves so many inconsistencies, perhaps the most plausible explanation, and the one most acceptable to ideologically temperate observers, relates the break to a clash of personalities: the aging Stalin, not an easy boss at the best of times, had conceived an intense dislike for Tito, and Tito reciprocated—first with circumspection and, then, with boldness born of desperation—his dislike.

This interpretation is probably close to the live truth, whereas the arid dispute over dogma most certainly is not. However, it rests upon guesswork. The evidence for any interpretation of the Russian-Yugoslav rift is tantalizingly meager. The principal actors of the drama were Communists and masters of the art of burying the truth under Aesopian double-talk. Only one fact is

incontrovertible: Tito was the first Communist who defied the organization in Moscow, survived, and retained control of the organization's local chapter.

How Tito was able to free himself of Stalin's domination is the truly mysterious part of the Yugoslav miracle. There is nothing mysterious about its other part—the massive intervention of the United States on behalf of the Yugoslav Communists once they had been read officially out of the Moscow fold. The quarrel with Stalin freed Tito to become a recipient of American help, and American help supplied him with the material basis of his influence in world politics.

Although no complete accounting has been made available by official sources, enough data have been released to give a fair approximation of the total costs involved in keeping Yugoslavia afloat. From 1949 to 1955, United States economic assistance to Yugoslavia amounted to nearly $450 million.

This does not include military assistance granted after July, 1951, or economic aid rendered by Great Britain and France under the Tripartite Agreement of 1951. Military assistance accounts for an additional expenditure for the years 1951–55 of about $500 million; in 1951–52 Britain and France paid out $63 million in the form of straight grants to Yugoslavia. To all these bilateral transactions must still be added loans granted, with the consent of the United States, by the International Bank for Reconstruction and Development and advances authorized by the International Monetary Fund.

On the basis of public records, it is possible to compute the total of gifts and loans received by Yugoslavia from the West in the last half-dozen years at well over $1,400 million. Approximately nine-tenths of this sum came directly out of the pocket of the United States or derived, under a set of complicated guaranties, from the United States Government acting through third parties.

Although the 5-year total is appreciably smaller than United States grants to major members of NATO (which Yugoslavia refused to join), Yugoslavia's population is only one-third the home population of the United Kingdom and France, not to speak of their overseas possessions and global commitments.

Measured against Yugoslavia's productivity and per capita income, American assistance to Yugoslavia represents an intervention in the national economy on a scale more massive than in the economy of any other country. Yet Yugoslavia refused to enter NATO [North Atlantic Treaty Organization], to harbor Western military bases, to adhere to any binding alliances except the pact with Greece and Turkey, or even to enter upon some of the contractual arrangements under which the United States obtained supervisory rights and reciprocal privileges similar to those granted it by all other recipient countries.

Yugoslavia has done very well indeed—as well as, if not better than any other protege of the United States in its role as dispenser of international munificence.

Presumably those who devised the Yugoslav policies of the United States expected some tangible returns on such an immense investment—if not dollar for dollar, then at least an increment of Western military security and specific political advantages in the Cold War.

Assistant Secretary of State George W. Perkins, testifying in November 1950, before the Senate Foreign Relations Committee, urged that American economic aid should be extended to Yugoslavia, not only because of the suffering of the Yugoslav people confronted by crop failure, but also because "the humanitarian appeal is reinforced by the hard factor of national interest." He went on to argue that the interests of the United States were directly involved, that food shipments to Yugoslavia were a logical step in guarding United States security, and that as long as Yugoslavia maintained its independence it "continues to be a significant factor weakening the power and influence of Stalinist Communists throughout the world.

He enumerated the specific benefits of orienting Yugoslavia toward the West: Yugoslav support of the Greek Communist guerillas would cease; tensions between Yugoslavia and Austria would be relaxed; the Yugoslav army would be a factor in the world balance, deterring Soviet aggression in the Balkans and elsewhere in Europe; Yugoslavia would help to make the United Nations more effective; and Yugoslavia would make a contribution to the Western economy.

Mr. W. Averell Harriman, at that time Director of the Mutual Security Administration, requested President Truman to transfer military funds to the economic assistance of Yugoslavia because "Yugoslavia occupies a vital strategic position on the flank of the defense of Western Europe * * * and its ability to defend itself is considered essential to the security of Western Europe."

These statements do not stand alone. They were to be echoed by a long line of responsible officials who, as foreign aid administrators and State Department functionaries, were engaged in the formulation and execution of American policies toward Yugoslavia.

For a surprisingly long time these assumptions remained unchallenged. Yet they are corroborated neither by the history of Yugoslavia nor by the history of communism and Communist schisms. Was Yugoslavia under Tito or, for that matter, at any time and under any regime "essential to the security of Western Europe"?

In the First World War, the collapse of Serbia did not materially alter the balance of military power, and the western allies managed to defeat the central powers without Serbian assistance. Serbia's independence was restored through western military intervention, and greater Serbia (Yugoslavia) owed its existence to the West's military and diplomatic writ.

In the Second World War, Yugoslavia succumbed within a few weeks to the concentric attacks of the Germans, launched from the Danube Basin and Bulgaria. Although the Yugoslav guerillas performed notable feats of valor in their fight against the Germans and Italians, Yugoslavia, like most of continental Europe, owed its liberation to the victories of Stalingrad, the Normandy beachheads, and the Rhine.

Measured by these colossal feats of arms the military contribution of Yugoslavia was minute. In fact, the strategic geography of southeastern Europe precludes successful Yugoslav resistance against any major power operating from the northern and eastern approaches. Geographically, Yugoslavia is a long narrow strip of territory interposed between the Adriatic to the west and the Danube plain and the Balkan Mountains to the East. The openness of the Yugoslav frontier toward the north and east, the chain of mountains running from north to south and barring east-west movements, and the lack of a system of transversal railroads and highways, these geographical characteristics combine to pose virtually insuperable obstacles to an effective defense against continental aggression.

Both Yugoslava and western officials argued for western military assistance to Yugoslavia on the grounds that certain satellites of the Soviet Union—Hungary, Rumania, and Bulgaria—threatened armed attack. The principal supporting evidence for the seriousness of this threat was supplied by reports (emanating from Belgrade) for satellite troop concentrations along the Yugoslav border.

But against this alarming intelligence could be marshaled fairly ample information about the abysmal state of the satellites' national economies and the political unreliability and inadequate training of their military levies. None of Yugoslavia's eastern neighbors was in a condition to wage aggressive war, unless it had the outright military support of the Soviet Union. Any large-scale military operation against Yugoslavia would have brought Russian forces into action. Even if we assume, and it is a very large assumption indeed, that the Soviet Union might have ventured anywhere in Europe upon overt military aggression and might have dared to provoke a crisis leading inevitably to a general conflagration, it is difficult to see how the kind of military aid Yugoslavia had demanded and received from the west would have affected the outcome of such a war.

HOW STRONG IS YUGOSLAVIA?

Events would have conformed to the pattern of 1914 and 1941. Tito's estimated 30 divisions would have been unable to defend the eastern plains. In the best of circumstances, Tito's forces would have succeeded in falling back to the mountains, there to regroup in order to wage guerilla war. The fighter planes and tanks which Tito obtained from the West would have been useless for operations of the partisan type. Yugoslav guerilla bands might have inflicted as much damage on the Soviets as they did on the Germans in the Second World War, but it is still inconceivable that they would have contributed materially to the security of Western Europe.

Doubts as to the strategic and technical effectiveness of the Yugoslav defensive build-up are not allayed by considerations of national morale. The bulk of the Yugoslav Army consists of peasants. The food shortage of 1950, which the United States undertook to remedy by food shipments, was caused in part by insufficient rainfall, but it was also caused in part by the regime's ruthless attempt to collectivize private farm holdings.

The Yugoslav peasants responded to the Communists' agricultural program, copied from the Russian model, by reducing crop acreage, slaughtering pigs and cattle for their own consumption, and withholding farm produce from urban markets. The resultant crisis endangered Tito's hold on the Yugoslav people far more seriously than Stalinist sleepers in the Yugoslav Communist Party. The reversal of agricultural policies, especially the abandonment of the collectivization drive and the toleration of a thriving black market for farm produce, obliquely acknowledged the nature of the real threat to the regime.

New legislation promulgated in 1950 and 1951 sought to appease the resentments not only of the peasantry but also of industrial workers and national minorities. The regime proclaimed that the grant of greater autonomy to factory management and workers' councils marked the return to Marxist-Leninist principles. The party's theoreticians trained their dialectical guns on Stalinist centralism, but in fact, Tito yielded to popular discontent and not to the force of theoretical arguments. Though Tito's personal popularity had diminished less than the prestige of the Communist Party, it still depended heavily upon the contrived adulation of spontaneous (i. e., carefully staged) demonstrations.

It was not the unpurged Stalinists in the party or the intrigues of the Cominform or the Soviet economic blockade or foreign military threats that menaced Tito, but the Yugoslav people's growing distaste for his own ruling clique. Any other explanation would have to be based upon the assumption that the great mass of Tito's countrymen had been transformed, within a few years, into convinced Communists, and that all would have been well had it not been for a sudden access of Stalinist imperialism. In fairness to Tito, it must be conceded that not even he claimed as much.

WIDE APPEAL OF TITO: A MYTH

The amazing assumption that the Yugoslav population, composed predominantly of small freeholders, stood four-square behind Tito, underlies United States policy toward Yugoslavia. Once the makers of our foreign policy had persuaded themselves of the identity of interest linking the regime and the people and of Tito's right to speak for the nation, they were able to view aid to Yugoslavia as thoroughly compatible with the canons of international morality. Ambassador John Sherman Cooper, calling in 1952 upon the United Nations to censure the U. S. S. R. for its behavior toward Yugoslavia, invoked on the behalf of the latter country the "fundamental principles of national independence."

It would require considerable space to explore the meaning of these "fundamental principles" to the common people of a country where a small band of Communists, supported by the Red army, had usurped the government and held their power by virtue of coercive methods that differed not by a whit from those practiced anywhere in the Soviet orbit.

It must suffice here to note that the present regime has refrained consistently from consulting the will of the Yugoslav people and staking its tenure on elections which have not been rigged by all the familiar devices of "popular democracy." It is uncertain, to say the least, that the average Yugoslav citizen, deprived of political rights and denied the basic civil liberties, views Tito's one-party state as the legitimate defender of Yugoslavia's "national independence."

The "fundamental principles of national independence" are inseparable, one should presume, from the concept of freedom, internal as well as external, if they are not to serve a tyrannical regime as a propaganda screen for staying in power. Such a fraud was perpetrated successfully by Stalin on the Russian people at war with Germany.

It can be argued that Tito qualified, on a trial basis, for some Western support because dissension among Communists redounded, at the height of the cold war, to the patent advantage of the West. There was some propaganda value in showing the world that the West would not brush off a satellite that had defected from Moscow. However, it was unnecessary, for the purpose of Western policy, to acclaim Tito as the defender of national liberty.

An accident in the intramural politics of communism cast Tito adrift from Moscow leadership. The break was not of the West's making. Yet the accidental association of a professional Communist revolutionary, now denounced by Moscow as treacherous heretic, and the leading powers of the free world formed the basis of settled Western policies. At the start, these policies were addressed to the emergency created by the break and then increasingly to the long-range development of the Yugoslav economic and military potential.

In a series of agreements with the United States, Tito accepted, together with American economic and military assistance, certain conditions called for by United States law, such as the right of the United States to inspect the use made by the Yugoslav services of American military supplies. The text of these agreements is quite explicit on what Tito did and did not undertake to do. His public statements, which remained uncontradicted by the official voices of the West, should have dispelled all doubt as to the many and significant reservations with which he hedged in his Western commitments.

Whatever he may have conceded to his Western benefactors, Tito did not agree to join the Western system of collective security. He retained, to a remarkable degree, his freedom of political and ideological maneuver. Nevertheless, Tito's closefisted and reticent dealings with the West's foreign offices sparked great hopes and expectations: his example would unleash anti-Stalinist revolts in the Communist Parties outside the Iron Curtain and strengthen separatist tendencies within the Soviet orbit itself—perhaps even in Red China; at home, he would transform his dictatorship into a real democracy or at least make a beginning by granting his people some basic civil rights; and, in general, he would move ever closer to the West politically and spiritually. Many books and articles have been devoted to evoking and exploring these wholesome prospects.

In sober fact, Tito applied his considerable ingenuity and energy to tasks that either were not related to Western hopes and expectations or bid fair to embarrass Western strategy in the cold war. No sooner had Western aid secured his home base than he launched himself on a brilliant diplomatic and ideological campaign designed to strengthen his position as an independent power between the two hostile camps and to consolidate the so-called uncommitted forces the world over. Since the monolithic controls of Moscow closed the Soviet orbit to political and ideological penetration, the brunt of Tito's initiative necessarily fell upon the uncommitted countries of Asia—and upon the West itself.

With singular adroitness Tito perfected the two major instruments of his strategy: the appeals of the Socialist utopia and of neutralism. From the alchemy of his propaganda, Yugoslavia emerged as a model Socialist country, beset by the wicked machinations of the Kremlin yet valiantly applying the principles of Marxism in their pristine purity. This image corresponded happily with the longing of those western intellectuals who saw the Russia of the 1920's as socialism's promised land, then awakened to the grim realities of Soviet practice, yet kept on looking for the renaissance of Marxim freed of the Stalinist incubus.

Tito's proper communism exerted a powerful attraction not only upon those ex-Communists for whom the god had failed, but also upon not a few western Socialists whose anti-Communist records were unblemished. Pilgrims, eager to rejoice in Tito's achievements, arrived in Belgrade in growing numbers. Not all may have returned wholly reassured about the novelty of the Yugoslav experiment. But Tito's hospitality and the persuasiveness of the multilingual young men and women who guided the visitors through the intricacies of the Moscow-Belgrade dispute as well as through half-finished factories and housing projects were rewarded by wide and, for the most part, favorable publicity.

Only a few years earlier the Yugoslav Communists had vented their anti-Western sentiments in language more outrageous than that employed by any other representative of the Soviet bloc. These verbal barrages had been followed by acts of violence such as the shooting down of unarmed American planes. Never had Yugoslavia stood so low in the West's esteem. Yet all this was now forgotten or forgiven.

The western press accorded a sympathetic and respectful treatment to Tito's words and deeds. How much the West's left-wing intelligentsia and its influential ramifications in the world of journalism and literature stood for in Tito's reconversion to respectability can be easily seen by comparing their treatment of the Yugoslav dictatorship with their treatment of say, the Spanish and the Chinese Nationalist regimes. Although no one has been able to prove that the two latter governments have shown themselves less mindful of the rights of individuals and cultural minorities or more hostile to the United States and its allies, they consistently fared worse than Yugoslavia's red rebel in their publicity. Tito's subtle play upon the West's own ideological schisms has paid off handsomely.

TITO EXPLOITS COLD WAR

No less successful has been Tito's exploitation of the political and psychological divisions of the non-Communist world in the cold war. Although Western statesmen may have convinced themselves that Yugoslavia had become a bulwark of Western security, Tito's principal diplomatic efforts have been devoted to organizing the neutralist international. Even before Stalin's death, Belgrade appeared to exert a magnetic attraction on neutralist forces everywhere; and after Stalin's death Tito's statements on world affairs increasingly keynoted the theme of noncommitment, independence, and anti-imperialism.

The very example of Tito's evasion of binding commitments in return for Western goods and arms, suggested a similar strategy to whoever felt that Western aid was the due of independent, backward countries and entitled the donor to no other than psychological compensation. Especially in the arc of free Asia, Tito's prestige grew, and Yugoslav delegations were accorded the welcome usually reserved for the representatives of a major power. Nowhere did Tito's performance meet with a warmer approval than in New Delhi. Tito's triumphal visit, in December 1954, to Premier Nehru bore fruit in a joint statement of the two rulers that contains the following passages:

"The similarities of historic background and the social and economic conditions of their countries, and the fact that they have emerged as independent nations through powerful movements of national liberation have endowed their understanding of each other and of their countries with deeper significance and given their friendly nations greater ease and facility. * * *

"The President and the Prime Minister desire to proclaim that the policy of nonalinement adopted and pursued by their respective countries is not neutrality or neutralism and therefore passivity as sometimes alleged, but it is a positive, active, and constructive policy seeking to lead to a collective peace on which alone collective security can really rest."

Although the document rejected neutralism as a bad word its negative implications for Western diplomacy were plain: the cause of neutralism—under whatever name it is disguised—had scored a widely-publicized victory. Since, despite the document's preamble, the economic and cultural bonds between Yugoslavia and India are about as significant as those between Iceland and Afghanistan, we must presume that Yugoslav-Indian relations join at one point only: rejection of the security system forged by American leadershp.

ON RUSSIAN-YUGOSLAV AMITY

The visit in June, 1955, of the First Secretary of the Central Committee of the Communist Party, N. S. Khrushchev, and the Minister President of the Soviet Union, N. A. Bulganin, to Belgrade, marked the zenith of Tito's diplomacy after the break. Some shrewd observers of Tito's maneuvers on the morrow of his expulsion from the Soviet fold surmised that his main purpose in obtaining Western aid was to restore his bargaining position in future negotiations with the Kremlin—if not with Stalin then with his successors. What really happened in Tito's negotiations with his one-time comrades probably will never be disclosed to profane inspection, but the outcome is plain: the liquidation of Russian-Yugoslav conflict and a close reapproachment of the two regimes.

Although Tito sought by diverse gestures—such as his unsmiling reception of the Russian worthies at the Belgrade air-port minimize the portentousness of the occasion, the joint Soviet-Yugoslav declaration of June 2, 1955, revealed candidly the far-reaching na-

ture of the agreement that came out of it. The Yugoslav and Soviet leaders professed identity of opinion on virtually all issues affecting East-West relations.

The declaration denounced "military blocs" (which in Soviet parlance means specifically the North Atlantic Treaty Organization, since the Soviet Union contends that its own military system is a mere answer to the Atlantic alliance). It called for the admission of Red China to the U. N. and endorsed the results of the Bandung conference. It advocated German unification on a "democratic basis in conformity with the wishes and interest of the German people and the interests of general security" (substantially the Russian position on the German problem).

As striking as the content of the document is its wording, which employs the classic language of Soviet foreign propaganda and contrasts sharply with the style of western diplomatic notes and declaration. The document does not lack frankness. Whatever illusions the West still harbors are the product of its own wishful thinking.

To leave the United States in no doubt as to its precarious place in Yugoslavia's affection. Tito, in an address delivered on July 28, 1955, before a mass meeting in Croatia, praised the Soviet Union, criticized the West, and denounced supervision of military equipment granted under the United States aid program. He sharply asserted that Yugoslavia rejected certain types of inspection called for by United States foreign-aid legislation—types of inspection to which Tito had heretofore consented without noticeable scruples. Although it is still too early to assess the full consequences of these developments, which must have been preceded by many months of secret Yugoslav-Russian negotiations, it must be clear by now that Yugoslavia is no longer a stable factor in the system of Western security.

What have been the concrete gains of the United States Yugoslav investment? Since the Yugoslav Army never had to fight the Soviet satellites and accomplish its assigned mission, namely, to defend itself and Western Europe, we will never know how essential the Yugoslav contributions to the security of Western Europe might have been. As for sparking discord among the Soviet satellites and winning over disgruntled Communists from their allegiance to Moscow, Tito's achievements were singularly unimpressive.

There were no mass defections inside or outside the Iron Curtain for which he could be given credit. He did win friends among the uncommitted peoples, especially in non-Communist Asia; he professed sympathy for the aspirations of Red China, and thus aided the Soviet peace drive as well as Soviet attempts to split the free world on Asian issues. He used Western economic aid, on the whole wisely, to strengthen the Yugoslav economy and, incidentally, to strengthen the hold of communism on the Yugoslav people. He employed the leverage of Western support to pry open the doors of the Kremlin and to negotiate favorable terms for a reconciliation with his former associates in the world Communist movement.

Yugoslavia remains a Communist state, run by a small clique of party functionaries with the help of the secret police. It is difficult to enter these many and remarkable accomplishments of Marshal Tito on the credit side of the West's diplomatic ledger.

Before the fiasco of the West's—chiefly the United States'—Yugoslavia policy is allowed to fade into the vapors of the Geneva spirit, it would be well to contemplate its lessons.

WEST'S POLICY: "FUZZY"

To begin with, the West's policy toward Yugoslavia was a hasty improvisation. It was not carefully planned; it was intellectually fuzzy. It sought to draw the distinction between "good" and "bad"—pro-Western and anti-Western—Communists. Fifteen million Yugoslavs were friendly toward the West, their 20,000 Communist bosses were not—and could not be lest they cease to be Communists.

Since the West had no well-laid plan for such a contingency as a Communist schism within the Soviet orbit, it saw only one alternative where there was in fact a choice among several policies. When Stalin broke with Tito, the West could had awaited developments which, in all likelihood, would have culminated in internal revolution and thus would have opened the field to diverse factions, including the traditional pro-Western and democratic forces of Yugoslavia. As another alternative, the West could have given, while direct Soviet intervention seemed likely, modest aid to Tito and then could have made further support contingent upon a genuine democratic reform of Yugoslavia's political institutions.

Then again, the West could have called, immediately after the Moscow-Belgrade rift, for the overthrow by the Yugoslav people of the Communist dictatorship and the establishment of a truly popular regime representing the real interests of the present masses and of the national minorities. Admittedly, the last alternatives would have required, on the part of the West, a dedication to the cause of freedom everywhere and a capacity for effective action that it has displayed only reluctantly under conditions of dire emergency. But the question must now be asked as to whether such a bold course would not have led to a decisive victory in the Cold War: the liberation of Yugoslavia from Communist dictatorship would have exposed the pretensions of "popular democracy" and dispelled the myth of the "inevitability" of communism.

The West had—and missed—the chance of carrying the offensive into the enemy camp and of challenging the Soviets in the satellite country which was furthest removed from the centers of Soviet military power.

Weighty arguments can be adduced against the alternatives sketched out above. Each would have been fraught with considerable risks. But not one of them, had it been chosen, would have exposed the United States to greater humiliation than it has suffered—and is still to suffer—at the hands of Tito. This is no laughing matter even for so self-confident and so resilient a people as the Americans. For the enslaved peoples under Communist rule, the United States expedient support of a Communist regime, albeit a heretic one, which was subsequently reconciled to Moscow, is a shattering moral blow.

WHAT UNITED STATES SHOULD DO NEXT

Some of the losses incurred in our Yugoslav policy are irretrievable. Perhaps the most prudent course now would be to cut our losses, to write off a billion dollars as a poor political investment, and to draw satisfaction from the return of a measure of prosperity to Yugoslavia's hard-tried people. Against the adoption of such a course stands not only the magnitude of the investment but also the inertia of officialdoms notoriously disinclined to concede error. However, the thorough review of the United States Yugoslav policies cannot be postponed indefinitely, for the emboldened Tito can be relied upon to force the issue.

Out of the agony of such a reappraisal may come a deepened understanding of the nature of the conflict between West and East. This conflict is being waged over the allegiance of peoples and not merely over strategic positions. Our Yugoslav policies may pass, though barely, the test of Realpolitik. Yet Realpolitik has not been attended, in this century, by notable and lasting successes. The last battles have been won by those who nailed an ideal to the mast and refused to haul it down.

The United States, loath to risk atomic devastation, may have to settle down to coexistence with Communist tyrannies. It may have to deal with them. But it should disdain to cloak these dealings in the pretense of a cordial and lasting partnership. Such a pretense will deceive no one—certainly not professional revolutionaries—and it will only deepen the despair of the millions who look upon the United States as the last best hope of liberation from Communist rule.

Losing by Default

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1956

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 19, 1956:

LOSING BY DEFAULT

Why have we taken such a propaganda clobbering in Japan on the Okinawa issue?

Why must we get our ears knocked down daily over the radio, in newspapers, on movie screens, and in huge synthetic rallies calculated to whip up anti-American sentiment?

The United States Information Agency and the United States Army public information sections have fantastic and high-paid staffs in Tokyo, and obviously ample budgets. Yet they sit on their hands and cover their typewriters in the face of daily barrages from left-wing rabble-rousers.

"Neither the State Department nor the Army here realizes," complains an American in Tokyo, "that they've got to keep answering and keep putting out correct information. They seem to think that if they make a statement, everybody in Japan remembers it for 6 months. They seem to have no idea about public relations, or propaganda."

While Japanese indignation mounts over Okinawa—as reflected in the July 8 national elections—the USIA in Tokyo feeds out innocuous, travel-type films to TV stations. Meanwhile Commie broadcasts paint lurid, lying word pictures of Okinawa girls being molested daily by Americans; of starving farmers forced to sell their daughters into prostitution.

Why doesn't USIA—or the Army—come up with some newsreel films showing the truth of the Okinawa situation and presenting the United States side?

Why doesn't the USIA point out that Americans wouldn't be on Okinawa today if Japan hadn't lost a war of aggression against America—and might lose another to Communist aggression if we weren't there to defend the area?

Why doesn't USIA point out how living standards have risen on Okinawa to an incredible degree under American administration? And why not set forth what Japan's army was paying for Okinawa land when it was in Okinawa?

And for good measure, our agencies might gently remind the Japanese occasionally how much aid and material help the United States has been giving Japan—hardly the usual procedure of a war victor.

We could jog their memories on the fact that we immediately returned Japanese prisoners of war when the fighting ended, whereas Russia and Communist China, their would-be pals, are still holding thousands of Japanese 11 years after war's end.

When our country is being hurt is no time to be soft or bashful. Our official representatives stationed in Japan are just as obligated to defend their country in cold war battles as they are in a hot war.

They should not forget that—and if they're reneging on the job, we think Congress would like to know about it. And ponder the usefulness of the USIA.

The Okinawa fight, or any other propaganda battle, cannot be won with infrequent news releases distributed from here. It has to be fought and won in the field where lies must be challenged daily, where false charges must be denied with vigor and where truth must be broadcast, printed and reiterated—incessantly.

Schedule of Tour of the 13th Ohio District

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. BAUMHART. Mr. Speaker, despite the tremendous technological advances that have been made in the field of communications in recent years, there it no adequate substitute for face-to-face contact to enable a Member of Congress to learn the sentiments of his district and render the best possible service to his constituents.

It is for this reason that I look forward with fond anticipation to my annual postadjournment tour of each of the four counties in my congressional district.

Last year I was visited by constituents from all walks of life—housewives, farmers, mill workers, retailers, and manufacturers, retired people—a representative cross section of Lorain, Erie, Huron, and Sandusky Counties.

Many dropped in to see me about pending legislation, foreign affairs, farm policy, national defense. Still others came to discuss personal and business problems—servicemen's family hardship cases, Government employment, veterans and social security benefits, Academy appointments, harbor development and other public works, postal service, Government contracts, immigration procedures, and so forth.

Beginning on September 17, I will embark on another 4-week grassroots tour through the 13th Ohio District, according to the following schedule:

September 17–21: Loraine County Courthouse, Elyria, Ohio.

September 24–28: Erie County Courthouse, Sandusky, Ohio.

October 1–5: Sandusky County Courthouse, Fremont, Ohio.

October 8–12: Huron County Courthouse, Norwalk, Ohio.

I am grateful to the local officials who have made office space available to me for these conferences. I feel their cooperation and helpfulness deserve public acknowledgment.

Individuals and groups who wish to confer with me during this tour are welcome to visit me at their convenience. No appointments are necessary.

Our republican form of government demands that we, as the elected representatives of the people, keep open every possible channel to public opinion within our districts. I know that these meetings during September and October will be of great assistance in enabling me to discharge my responsibilities as a Member of the House of Representatives.

Steel Scrap Boondoggle

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. GAMBLE. Mr. Speaker, under leave granted by the House, I present for insertion in the CONGRESSIONAL RECORD a short statement concerning a survey to be undertaken by the Secretary of Commerce to determine the iron and steel scrap available and potentially available, and an article from the Journal of Commerce titled "Steel Scrap Boondoggle."

Mr. Speaker, shortly the Secretary of Commerce will make a survey to determine the iron and steel scrap available and potentially available as directed by H. R. 9052 which extends the Export Control Act for an additional 2 years. This survey, I believe, will show that the amount of scrap potentially available is closely related to the price users are willing to pay. In any event, it will supply light on a problem where recently there has been only heat.

Mr. Heinze Leudicke, the editor of the Journal of Commerce, reviewed the fundamental issue in using export controls to influence the raw material costs of the steel industry in an editorial which appeared on June 25. He quotes the basic philosophy of my constituent, Assistant Secretary of the Interior Felix Wormser.

I am inserting Mr. Leudicke's editorial in the RECORD in accordance with leave previously granted for the benefit of my colleagues:

STEEL SCRAP BOONDOGGLE

It now seems likely that the Export Control Act will be extended before the end of the month—its expiration date—without any provision for an outright limitation on exports of iron and steel scrap.

Recent declines in the prices of steel scrap have weakened considerably the position of those who had strenuously argued for use of the Export Control Act to alleviate a squeeze on the users of steel scrap. The issue still is alive, however, and is bound to come to the fore anew as soon as steel scrap prices show signs of another sustained advance.

The significance of this episode lies in the fact that it is demonstrating once again the willingness of a considerable part of the American business community to compromise the principle of free markets if application of this principle threatens to cost it some money.

It is all too easy, under such circumstances, to appeal to Washington for help.

That is exactly how the steel scrap issue became an issue during the Congressional considerations of an extension of the Export Control Act.

Fortunately, in this instance, the majority of Congress protected industry against itself. It not only showed a cold shoulder to those arguing for scrap export limitations, but it also stopped those of its own members who attempted to parlay this debate into another controversy between big and smaller business.

The case of those favoring steel scrap export limitations from the start suffered from several weaknesses.

The issue was presented in the name of national defense wherever it truly applies. This certainly is a valid argument. Throughout the Congressional deliberations of the Export Control Act it became painfully clear, however, that, in this instance, the national defense argument was used to cover up an attempt to hold steel scrap prices down by actually introducing through a back door an indirect form of price control.

Steel scrap prices, to be sure, had been rising rather rapidly and part of the rise was due to strong demand from abroad.

This is exactly the way the free market system is supposed to work. If we had not been all too willing to compromise this principle in the field of agricultural commodities, we would never have gotten ourselves into the current mess with our farm surpluses.

National defense, we admit, is an overriding consideration, even when it involves tinkering with the law of supply and demand.

But—and here we come to the crux of the whole problem—if national defense is indeed involved here, then why restrict the export limitation to iron and steel scrap? Wouldn't it be logical and necessary to restrict the exportation of other steel items as well, including finished steel products?

Congress fully realized this weakness in the case for the export limitation of iron and steel scrap. Hence it ordered, through a proposed amendment to the Export Control Act, a full study of the defense essentiality of iron and steel scrap.

This study is not likely to come up with the conclusion that all steel exports should be limited in the interest of national defense, because there is no need for such action under current conditions.

This would—or at least should—completely stop the drive for limitations on scrap exports, except, of course, to countries behind the Iron Curtain.

The steel industry, we feel sure, is not inclined at this time to entertain a proposal for export limitations on other steel exports. Therefore, it should drop its drive for such limitations on scrap alone.

Its current stand is open to considerable suspicion as an attempt to use a general law—the Export Control Act—for purposes of controlling the price of one of its important cost factors without similar limitation on its finished goods prices.

Price control has no legitimate place in a peacetime economy in this country, regardless of whether openly labeled as such or whether sneaked in through a back door.

Industry should not forget Assistant Secretary of the Interior Wormser's recent timely remark that, war or peace, "one type of Government intervention in commodity markets, if successful, leads inevitably to another." He advised industry to "give Washington a particularly wide berth when markets apparently misbehave."

Railroad Retirement Bill

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. TOLLEFSON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following article which appears in the July 21 issue of Labor:

APPEAL TO CONGRESS: VOTE OUT RAIL RETIREMENT BILL

Time is running out as Congress heads toward adjournment, and railroad labor's No. 1 measure—to increase railroad retirement benefits by 15 percent—has not yet been acted upon.

Labor urgently renews the plea to Congress which it sounded last week: namely, to jar this legislation loose and act on it before the curtain is hauled down on this session. Labor reiterates what it pointed out then: that the bill is of the most crucial concern to the million-plus workers on the railroads and to hundreds of thousands of anxious retired railmen, as well as widows, wives, dependent children and other beneficiaries. The measure is supported unanimously by the standard railroad labor organizations.

Once more labor calls upon Congress to act before it adjourns. If it does not do so, the consequences will be most serious and will undoubtedly be reflected at the polls next November.

H. R. 12302

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. METCALF. Mr. Speaker, I have introduced H. R. 12302 to authorize the Secretary of the Interior to permit the United States Fish and Wildlife Service and other agencies within his department to enter into cooperative agreements with other Federal agencies, colleges and universities, State and Territorial fish and game departments, and non-profit organizations for the conducting of research, training, and demonstrational programs through the establishing of cooperative research units, which may be named for the various States and Territories in which they are formed.

The research work to be conducted under this proposed program definitely would constitute valuable training for graduate students who are required to perform field research as part of their formal educational training. This kind of a program, confined largely to wildlife activities, has been in operation in 16 of the land grant colleges and universities—among them Montana—throughout the United States and Alaska since 1935. This bill would stabilize, strengthen and broaden the existing program.

The present cooperative research unit program, which has been operating successfully for more than 20 years, has proved itself to be a highly valuable and economical method of getting research work done while training men for future careers in fish and wildlife research, management, and administration.

The 16 colleges and universities affiliated in the present cooperative research unit program have bestowed 2,373 degrees upon wildlife students since the program started. A high percentage of the graduates are employed in State and Federal agencies and educational institutions in all parts of the country. The existing unit program has provided splendid cooperation between the Federal and State agencies and colleges and universities, and there is no doubt but that such local programs are in the public interest.

This bill will be examined and discussed during adjournment. It will be introduced again early next session.

Influence of Lobbyists on the Decisions of the CAB

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following portion of a letter from a constituent of mine brings up some very pertinent questions in regard to the influence of lobbyists on the decisions of the CAB.

It is always a difficult matter to know how far a Member of Congress should go in pressuring boards that have been set up specifically to study technical questions and give final decisions on them.

It seems to me that Mr. Winn's letter deserves thoughtful consideration:

UPPER NYACK, N. Y., *July 17, 1956.*

Hon. KATHARINE ST. GEORGE,
Twenty-eighth District, New York,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MRS. ST. GEORGE: I appreciate your letter of July 5; however, I believe a further examination of the situation is in order.

I recognize that the Civil Aeronautics Board, as opposed to the Civil Aeronautics Authority, is responsible for the award of any certificate of convenience and necessity for air transportation and that it functions as a quasi-judicial organization under the executive branch. I believe the circumstances surrounding the New York-Florida case are far above and beyond that Boards' immediate jurisdictional scope due to activities of lobbyists and Members of the Congress.

The newspapers and trade publications have recently been filled with local, State, and United States congressional groups who have been exerting pressure upon the Civil Aeronautics Board for approval of such carriers as Northeast and Pan American for operating certificates. The New England Governor's Council passed a resolution toward same.

Members of the United States Senate and the United States House of Representatives from the New England States joined in a common plea to the Civil Aeronautics Board as indicated in the attached article from the New York World-Telegram and Sun July 10. I consider such pressure as completely foreign to the intent of the Civil Aeronautics Act of 1938 and I am requesting that you as my Representative be aware of and take steps to protect those of us who will be the victims of such pressure tactics.

Very sincerely yours,

WARREN R. WINN, Jr.

American Indians: People Without a Future

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PATTERSON. Mr. Speaker, Mr. Ralph Nader, editorial manager of the Harvard Law Record, has recently written an excellent article entitled "American Indians: People Without a Future." I wish to include excerpts from it in the RECORD and highly commend it to the attention of my colleagues:

"We are people who are better known for what we were not than what we were, for what we are not than for what we are."—A Crow Indian, 1955.

American historical land fictional writings have instilled in the American public a misinformed and highly inaccurate view of the American Indian.

What our forefathers conquered, according to the writers, was an almost empty land whose tranquility was disturbed by a few scattered groupings of wild savages whose chief vocations were scalp-collecting, potterymaking, and dancing. These primitimes, so the myth goes, steadily receded before the onrush of civilization and have now become the "Vanishing American" of novel and poem.

There developed a voluminous history of the American idea of the Indian as a savage, a concept indispensable to a righteous and ethnocentric people appropriating a continent. Even today, on the screen and in cheap fiction, the bloodthirsty Indian has too often been used as an ugly background against which the virtues of our pioneers may be projected.

In more recent times a more refined concept of the "savage" Indian performs another function. It provides a readily available rationalization for those who covet Indian lands and resources. Bureaucrats promote programs to liberate the Indian under the mistaken notion that Indian culture and misery go together.

There is also a strain running through our literary heritage which has depicted the noble side of the aborigine. At times this noble savage theme has done the Indian more harm than good.

Countering the common belief, Jack Schaefer, author of Shane, wrote: "These natives, on the whole, were not as savage as the Europeans who called them savages. They had a distinct and in some respects highly developed civilization. * * * In the fundamentals of human decency, the simple amenities of daily life, in the relationships between man and man and between man and his God, they were easily as refined as the Europeans. But from the conquerors' point of view they were guilty of two sins: They were different; they were in the way. So they were called savages."

LEGISLATIVE REFORM BRINGS IMPROVEMENT

The impending destruction of tribal cultures was finally halted by the Indian Reorganization Act of 1934 (IRA). This legislation was in response to a demand for a new Indian policy which arose in the late twenties.

The philosophy of the IRA was predicated on the belief that Indian culture should be regenerated to promote Indian well-being. Fundamental to this program were the preservation of the land base, organization of tribal self-government, the elimination of

remaining legal restrictions and the recognition that people once freed must be freed for something.

In this spirit, Indians were given the right to establish corporations. Two-thirds of the tribes took advantage of this opportunity. Tribal societies were empowered and aided in undertaking political, administrative, and economic self-government. Land allotments were stopped and purchase of more land was provided for by a special credit fund.

A system of agricultural and industrial credit was established under which the repayment record of the tribes was excellent. Useful education for children and adults was accompanied by a program promoting self-help in developing the tribal economy. Research, considered essential to the program, was employed as a basic tool of action.

Substantial improvement

As a result of this program, an atmosphere of hope and optimism spread over the Indian reservations. For the first time in 80 years Indian holdings increased—from 48 to 52 million acres. Indian real income doubled. The death rate was cut in half. Cultural and religious liberty was restored.

However, the interpretations of many of these policies by later legislative order and by administrators down to the reservation level often resulted in serious discrepancies between the stated goals of policies and the actual consequences—a situation often leading to Indian disillusionment with Government programs.

The IRA was a daring excursion into the field of Federal treatment of ethnic minorities. At once it violated the hallowed "melting pot" concept. It enunciated the belief that an Indian could own a car, volunteer for the Army, pay his taxes and still continue being an Indian. Patriotism, ethnic preservation and participation in the American social and economic milieu all in one package.

The theory of the IRA has not been universally accepted by any means and, as we shall see, it is undergoing a complete reversal at the present time. Critics of the IRA have inveighed against its undue extension of the Indian isolation and non-assimilation which they consider harmful to the goal of Indian adjustment.

But it was not the theory of the IRA which caused the partial failure of the program; rather it was the inability fully to implement all the program. In any field of human relations, one-sided emphasis result in failure to promote the whole. For example, to promote an educational program without solving the employment problem produces serious frustrations and defeats overall objectives.

Then too, policies were never carried out with sufficient personnel, funds and the quality of information necessary to cope with the prevailing social situation. The salient feature of Indian administration and legislative action has been the failure to take into account the implications of nice sounding policies. Objectives cannot be achieved by decree, whether it be the assimilation or the preservation of autonomous Indian tribes.

When parts of a way of life are destroyed or undermined, something must take their place to prevent moral and social dissolution. Since its establishment, the Indian Bureau has failed to follow through beyond appealing but potentially deadly policies.

Dillon Myer takes over

With the appointment of Dillon Myer as Commissioner of Indian Affairs in 1950 the hopeful atmosphere began to change rapidly. "The erosion of Indian rights" was the phrase which Mr. Cohen applied to the Myer regime (1950–1953) in an article, (62 Yale Law Journal 348).

During this period, interference with Indian voting rights, tribal elections and the right of certain tribes to select their own legal counsel increased. This latter infringement prompted the American Bar Association to appoint a commission which rebuked the Indian Bureau for overreaching its authority. Personal customs and religions were again interfered with. Telling Indians when to go to bed and when to get up is not just a whimsical bit of paternalism, but has deep roots in a long tradition of Indian Bureau policy.

Consultation with Indian tribes regarding policies or legislation affecting their welfare virtually ceased. Restrictions on the use of property were imposed. Arbitrary standards of Indian qualification for civil service employment were established. Experts in Indian affairs were not consulted. A shroud of secrecy hung over the Bureau. Commissioner Myer withdrew from public scrutiny facts upon which public appraisal of his administration must largely rest.

FEDERAL POLICY—MISGUIDED ZEAL, PRIVATE PRESSURES

The central feature of congressional policy in the 82d and 83d Congresses has been aimed at the solution of the "Indian problem" through termination of Federal responsibilities for Indian tribes. This general policy statement (enacted as H. Con. Res. 108, August 1953) is given local application when specific acts are passed regarding particular tribes. Termination bills for six Indian tribes have already been passed.

The general intention and procedure for accomplishing termination may be summarized as follows:

1. End all Federal relationships with the tribe, including trusteeship of tribal and individual property, all supervision of tribal assets and tribal government and all Federal services.

2. Thanfer to the State the services formerly provided by the State government. Bring the tribe and all its members under the laws of the State (Public Law 280, enacted July 1953). Cancel all provisions for tribal self-government, except the self-government allowed any community under State laws. Cancel Federal corporate charters.

3. Transfer tribal assets to individuals, partnerships, corporations, or to a trustee as the tribe elects. Allow tribal members to sell their undivided share in tribal assets.

4. Distribute tribal money on deposit in the United States Treasury on a per capita basis.

Along with this policy of Federal withdrawal is a small increase in appropriations to give the larger and less acculturated tribes better facilities for health, education and economic development.

Finally, the Indian Service's "voluntary" relocation program for relieving overpopulation on the reservations by locating Indians in major cities is being pushed vigorously.

Termination attacked

The most critical attack on the present termination of Federal Government services has come from Oliver La Farge of the Association on American Indian Affairs. Supported by many Indian leaders, he believes that a realistic investigation of recent policy trends shows a concentrated program to solve the Indian problem by doing away with the Indian.

Mr. La Farge sees three deadly factors working in unison to support present Federal policy, impatience, ignorant good intentions, and greed.

Impatience over the fact that a hundred years of Federal guidance has still not enabled the great majority of Indians to be able to take care of themselves without special help. He remarks that the amazing thing is not that the Indians did not make more progress, but that they were able to survive and retain so much of their integrity.

Greed: On the Navaho Reservation are valuable minerals; certain Alaskan tribes lay claim to excellent salmon fishing areas; on the northern plains and in the Northwest there are valuable grazing and timberlands. Employing legal counsel, Indians no longer allow predatory interests to rent their lands for a pittance and to overturn their rights.

Cattle, fishing, timber, and mining interests are now pushing for rapid termination. Shouting the slogan of liberty and equality for the Indian but significantly deleting the third part of this trinity—brotherhood—they are prevailing on the impatient and uninformed to annihilate the Indian land base for their own commercial advancement.

Concern voiced

What specifically do Mr. La Farge and the Indians fear? Basically it is that termination and concurrent policies will spell the end of the tribal land base and leave Indians homeless, hapless and destitute. Terminating the trusteeship status of Indian land at once places them on the property-tax roll. They are free to alienate their share of tribal lands, but too poor or unknowledgeable to work the land profitably. Indians will be tempted by the quick cash offerings of white men. The specter of the key tract will appear with ever-increasing frequency. It has happened in the past and will be stepped up rapidly under termination.

Once Indians become landless, do they have other employment opportunities? Lacking employment skills, having little or no command of English, despised by neighboring communities, thrown into strange cultural environments, and situated in the poorer economic areas in our country, the Indian is not likely to acquire an adequate livelihood.

Governed by State and local authorities hardly sympathetic to Indian needs and more easily influenced by local pressure groups than is the Federal Government, Indians rightly fear that necessary welfare services will not be forthcoming.

The relocation program

Does the relocation program provide a partial answer to Indian misery? If administered wisely and gradually one can expect some Indians to benefit from it. Some 5,000 Indians have been relocated in the past 2 years and with appropriations nearly doubling this year to $900,000, the number of relocatees is expected to increase.

There are, however, serious flaws in the Bureau's relocation program. The screening process for relocation application has not been adequate. Too often aged, physically handicapped, and wholly unacculturated Indians have been relocated.

The relocation agencies in large cities are doing, in many respects, a woefully inadequate job. The function of these agencies has really been to "place" the Indians and then forget about them. Perhaps this may explain why Indians, tempted to leave their homes by Bureau propaganda of the "land of sunshine awaiting them," are bitterly disillusioned and are returning to the reservations at an alarming rate—a statistic conspicuous in its absence from Bureau figures.

The second and more fundamental criticism of the program is that the Bureau is placing too great an emphasis on relocation and not attempting to build up the reservation economy, thus promoting a type of squeeze operation. For example, considerable amounts of funds were recently transferred from the welfare and relief funds of the Bureau to finance relocation.

Responsibility delegated

With adequate development many reservations could support most of their population. It is interesting to see what the Bureau has done in this respect. The drafting of comprehensive rehabilitation programs—in which lies the only real hope for Indian welfare—has been delegated to a proposed private nonprofit corporation which is sup-

posed to secure the necessary funds from private foundations. These economic surveys are basic to any proposed program of reservation rehabilitation. It does not seem wise for the Bureau to delegate such an important part of its work to a private committee which has not yet established the corporation since the idea was conceived 2 years ago.

It is difficult to see how the Bureau can place so much hope on relocation even if administered wisely. From the Bureau's own figures, it can be seen that the cost of expanding the program is practically prohibitive. The relocation of 2,553 Indians in fiscal year 1954 cost $589,600. It is the practical result of termination which makes mass relocation appear to be a necessity.

If the Bureau would consult with the Indians themselves they would discover that these people desire a vigorous program of reservation development where acculturation comes gradually and the frustrations of maladjustment are minimized.

DEVELOPMENT NEEDED BEFORE WITHDRAWAL

Indian leaders recognize that the perpetual Federal responsibilities embodied in the treaties must end sometime. But rapid Federal withdrawal would lead, they feel, to the annihilation of the tribes. In this connection, Clarence Wesley, an Apache tribal leader, said: "Indians are in favor of a modified withdrawal system which would provide a gradual assumption of activities now administered by the Indian Bureau."

The central problem, so far as the Indians are concerned, revolves around the preservation of their established rights, as defined by Federal laws; the full development of their reservation resources and the establishment of adequate schools, hospitals, and other institutional services.

The Government's legal and moral responsibilities toward the Indians were a recognition that they were unprepared to enter an aggressively competitive white society. That unpreparedness still prevails today. That Federal programs have failed so miserably over the years is no excuse to abandon the Indian today. Indians are too weak to hold on to what they have if termination is realized. Federal responsibility should end only when the conditions necessitating that responsibility be eliminated.

A recent conference of anthropologists concluded that "as adequate skills, techniques, and leadership are developed among them, and as the tribe's economic situation improves, Indians can and will assume responsibility for financing and operating many community and other services formerly provided by government, and in some cases will eventually be able to assume the entire burden.* * * An important factor in success is likely to be personnel at all levels who are not only competent, but understanding of the Indian point of view, nonauthoritarian, and 'people-oriented.'"

Challenge to the American credo

The American Indian is the greatest test to our professed humanitarian and moral impulses in the treatment of ethnic groups here and abroad. The reason for this is simple. Programs for improving the Indian's condition cannot be justified, as point 4 programs can, on the grounds that the Indians will turn Communist or revolt. Neither can one urge that in the absence of such programs, the Indians will wield his voting power or provide embarrassment for the United States in foreign countries like larger minorities can in this country.

The Indian has none of these "advantages" to spur programs designed to benefit him. The Indian is small, weak, expendable. He poses no threat to our security. Helping the Indian will not pay in the sense that foreign aid pays. The impulse to better the Indian's livelihood can only come from a sense of our moral obligations and our humanitarian ideals. Moral satisfaction and a healthy and vigorous Indian people will be the fruits of equitable treatment of the Indian.

The instances are rare when the Government has responded to a legitimate desire based only on hope and not on votes, lobbies, and other power factors. That is why the Indian is our greatest challenge.

Eisenhower Crusaders in Trouble

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the St. Louis Post-Dispatch on July 15, 1956. The editorial entitled "Why Did No One Know" follows:

WHY DID NO ONE KNOW?

It is quite clear now that nothing but the most searching investigation of all aspects of the scandal in the office of Illinois State Auditor Orville E. Hodge, of Granite City, will satisfy the public interest. Every day adds something about which the voters of Illinois have a right to ask questions and reason to expect answers.

Take, for example, the matter of the bank which cashed most of the questionable warrants for the auditor's office—the Southmoor Bank & Trust Co. of Chicago. This same bank is reported in a dispatch from Springfield as holding or having held a mortgage on Hodge's home at Lake Springfield. The president of the bank has now resigned, a few days before he is scheduled to testify before the grand jury.

A natural question is this: Is there any connection between Auditor Hodge's private dealings with the Southmoor Bank & Trust Co. and the official dealings of his office? Illinois voters will not know the answer, but the question will be in the minds of many.

Governor Stratton says that Auditor Hodge should get off the Republican ticket for the November election. Doubtless he ought to, but why is it that no one on the Stratton team at Springfield knew anything about the dubious financial practices of Auditor Hodge when he was renominated without opposition last April?

Hon. Frank J. Becker Advances a Cause

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. DEROUNIAN. Mr. Speaker, our Postmaster General has a remarkably fine record of improvements in postal services over the past 3 years but a debt of gratitude is also due our colleague, the Honorable FRANK J. BECKER, for his part in bringing about one of the happiest of improvements. The following editorial which appeared in the Long Island Daily Press, on July 6, 1956, tells the story:

L. I. CLAIMS PRIORITY ON THOSE NEW PENS

Long Island should have a top priority rating when the Government starts putting ball-point pens in all the 37,863 post offices of the land.

The day of the scratchy post-office pens is doomed—and presumably the jokes about 'em, too.

The beginning of the end came when two Long Island women wrote to their Congressmen a couple of years ago. They said it was time something was done about the pens, something like substituting low-priced ballpoints.

Nassau Congressman FRANK J. BECKER picked up the ball-point from there. He went to Postmaster General Arthur E. Summerfield. Since then things have been happening. First, new pens were installed on a trial basis in a number of post offices. Now, we're told, all post offices will have them by September 1.

The pens will be green and bear the words "property of the post office." They'll be chained to the writing desks, unlike the old ones which are so horrible nobody would swipe them.

One of the first things we expect to do, is to go over to the post office and write Congressman BECKER a real nice thank-you note with one of those new pens.

Illinois Press Commended for Exposé of Scandal Among Eisenhower Crusaders

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the July 16, 1956 issue of the St. Louis Post-Dispatch entitled "Get Out All the Facts."

GET OUT ALL THE FACTS

The competition among leading Illinois newspapers in digging out the news about the scandal in the office of State Auditor Orville E. Hodge, of Granite City, is writing a chapter in the history of journalism in the Prairie State.

First the Chicago Daily News presented a series of reports on the odd-looking payrolls in Auditor Hodge's office. Then it got into the matter of the questionable State checks, running to around $500,000, many of them put through the Southmoor Bank and Trust Co., Chicago.

Now the Chicago Daily Tribune has printed an account of how the scandalous financial operations were allegedly conducted. Quoting the resigned bank president, Edward A. Hintz, the Tribune says the auditor personally made arrangements for the cashing of checks written out to individuals or firms that did not get any of the money. The Tribune quotes the bank's expresident as saying that he personally approved the checks as brought to him by Edward Epping of Lebanon, Auditor Hodge's office manager, and directed a cashier to pay the money. Cash was kept at the bank in a large envelope marked "Hodge" but was not deposited.

The Tribune reports that $269,568.27 of these checks were cashed at the Southmoor Bank. Where were the rest cashed and what were the arrangements and who was in on it? There are more and more things to know about this amazing scandal.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

Appendix

The Salt Creek-Wahoo Flood Control Project

EXTENSION OF REMARKS
OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. WEAVER. Mr. Speaker, I want to urge the membership of the House to read an article under date of May 26, 1956, from the Saturday Evening Post concerning the Salt Creek-Wahoo flood-control project in and near Lincoln, Nebr. This was one of the many fine projects recently approved by the House Public Works Committee and authorized by the House in the recent omnibus flood control bill.

The article follows:

THEY TAMED THEIR FLOODS

(By John Bird)

Just imagine that your house has sagged dangerously on its foundations, a supposedly gilt-edged stock in which you invested your life savings has gone sour, and your boss has suggested that you hunt for a new job. That gives you a rough idea of Jerry Kubik's predicament after a history-making rain poured down on his Nebraska farm, high on the bowl-like Salt Creek watershed.

The square-hewn, middle-aged Kubik was a happy man when the gray clouds first rolled overhead. His newly planted corn could use a shower—and Kubik needed good harvests as never before because he had worked most of his life as a tenant to buy this 240-acre farm. True, the land was sloping, the soil was thin and badly cut with gullies, but at least it was his own. Given time, he hoped to build a well-kept, prosperous dairy farm.

Then, on May 8, 1950, the rain fell. It was no spring shower. It crashed down as though a dam had burst in the sky. Kubig isn't sure how much water came down that day, that night, or the following day, because his rain gage spilled over. He estimates that at least 10 inches was dumped on his poor, nonabsorbent soil.

And what happened next demonstrates, in large part, why the United States is increasingly plagued by the twin problems of flood and water shortage. Both of those perils are born in our upstream watersheds where millions of Jerry Kubiks are custodians of the earth's thin mantle of soil. This farmer's tragedy explains, in part why masses of water and silt, rushing out of our highlands, have wrought savage destruction on many of our valleys. It tells why many of our once-clear streams have become foul, debris-clogged sewers. It shows why water tables in many natural basins have dropped alarmingly and why many of our industries and cities are searching frantically for new sources of supply as their wells go dry. It is one of the main reasons for the fantastic size of our annual average flood toll, now around $1,200,000,000, to say nothing of the toll in terror, dislocation and loss of life.

After that big rain, Jerry Kubik looked out on a scene of near ruin. "There was nothing to hold the water on the land," he told me. "It dashed right down the hillsides, taking out my corn. It cut my new-plowed land away, right down to the hard plow sole. I felt awful. Here the first farm I ever owned was washing away."

He wasn't alone in his troubles. There are 750 other farms scattered over this 170-square-mile basis known as the upper Salt Creek watershed, and much of the land was in no better shape than Kubik's. Since the densely matted prairie sad was first turned by the pioneers' plows, almost a century ago, much of the original black soil, rich and spongy with organic matter, had eroded away in the wash of rain and melting snow. Many a farmer, knowing no better, cultivated slopes that were dangerously steep, ran his crow rows up and down the hills like gutters, burned crop stubble and old grass, thus causing the soil to become lifeless, powdery, and unprotected.

The upper Salt hung like a tree with a decayed heart over the heads of the people down in the main Salt Valley. Hundreds of small twigs and branches of the stream start in the hills, flow down to several main limbs, which angle into the main trunk. The top of this drainage system is 1,500 feet in altitude, the bottom of the main valley 1,200, a drop of 300 feet in about 15 miles.

By Kublik's time, soil-conservation work was underway, but it wasn't catching up to the loss of soil and water. The Soil Conservation Service estimates that each year in the upper Salt the scoured fields, gullies, stream banks and roadsides were losing more than 1 million tons of soil. Small floods had become flashier and more frequent; rich bottom lands were usually underwater at least once, and sometimes several times a year.

The big storm of May 8 and 9 hit only about half of the Salt Creek watershed, but that was bad enough. The water rushed off the land into choked drainage channels. The streams roared out of banks, sweeping up fallen trees, fences and farm buildings, which became battering rams. After its swift downhill run, the muddy flood flashed out on the flat main valley in great waves. Here were rich farms, transcontinental highways, railroads, suburban developments, industries, and the city of Lincoln, capital of Nebraska, where lived 100,000 people.

Automobiles and trucks were trapped on the highways and some of them were swept away into the maelstrom, which in places, covered all but the tops of telephone poles. In the storm's whole area in southeastern Nebraska 27 people were drowned, several of them on U. S. 77, which runs north and south along the Salt Creek Valley. An 80-car freight train, standing near the village of Roca, where several branches of the Salt join, was scattered like a toy over nearby fields; the tracks were wrenched into fantastic curves. The flood lost much force as it surged across the bottom of the bowl toward Lincoln, but the industrial lowlands and part of the residential area of the town were inundated. The insignificant Salt Creek, which a small boy could wade a few days before, had dealt out $12 million in destruction. Three-fourths of the damage was agricultural, one-fourth was urban and industrial.

Some farsighted people in the valley had been conscious of the Salt's threat for several years and had urged the community to do something about it. One such worrier was Otto H. Liebers, a highly successful dairyman and State legislator, whose home farm is a few miles south of Lincoln at the edge of the valley.

"We had known for a long time that our livelihood, even our lives, were in danger," he told me. "We had been trying to get some safeguards. Back in 1947, after a bad flood from the upper Salt, a group in my neighborhood organized to look for some solution. We didn't quite know how to go about it, though. At first we thought we ought to clear the channel and get rid of the water faster, but we soon saw that we would just be dumping our problem on folks farther downstream. Then we called in the Army Corps of Engineers and asked them to build some dams for us, but they said, 'Sorry, you aren't big enough.'"

Another community prodder was Raymond A. McConnell, Jr., the youthful editor of the Lincoln Evening Journal. He had been reminding his readers, almost to the point of becoming a crank, that something should be done to prevent the water and soil in the watershed from speeding downhill. He pointed out that Lincoln, which seems to sit on a flat plain, actually is at the bottom of a huge three-quarters saucer, into which drain Salt Creek from the south and southeast, Middle Creek from the west, Oak Creek from the northwest and Wahoo Creek from the north. He wrote dozens of columns on the sorry condition of the soil and the drainage system; he made hundreds of speeches; he rated politicians for voters according to their views on conservation and flood control. He never tired of preaching what he regarded as sound guiding principles: "We need to do a total job of watershed conservation starting at the top and working down. It isn't a question of little dams versus big dams—it's a question of planning any and all dams and other measures to meet the needs of the basin."

Furthermore, he pointed out, the job couldn't be done simply by calling in a big Federal agency with a United States Treasury checkbook in one hand and the right of eminent domain in the other. "The people who live in a watershed know, better than outsiders, what they need," he said and wrote. "They should have a key part in the planning, and they should pay their fair share of the costs."

McConnell attracted much attention. The Journal won a Pulitzer prize in 1949 for "the most meritorious public service by any American newspaper." But the watershed continued to go downhill.

After that superstorm, before Lincoln had shoveled the mud from its face, McConnell turned on more pressure. About this time the elderly Otto Liebers came to the Journal office and suggested they team up. As a first step they called a mass meeting of "everyone interested in the problem"—civic groups, farm organizations, county officials and the like—and organized the Salt-Wahoo Watershed Association. The job of the association was to do anything and everything that might aid in converting the 1,600-square-mile basin into what McConnell likes to call "a valley of still waters."

There was plenty of enthusiastic support for the association from the farms, crossroads and towns, but during the next few years a less-dedicated group might well have concluded that erosion and flood were no harder to take than the baffling double talk and the guerrilla warfare among the Government agencies whose help was needed. Perhaps some bureaucrats underrated the pink-faced McConnell, who looked even younger than his then 35 years. They learned, the hard way, that his cherubic ex-

terior covers a man with a mission, a tough, persistent fighter.

Shortly after the big flood, the Army Corps of Engineers, which previously had shown scant interest in "this little crick," came in with a claim-staking proposal for four multimillion-dollar dams that would protect the city of Lincoln. The association quickly saw that the big dams wouldn't do a thing for the thousands of farms on which Lincoln makes most of its living. Also, it would put some of the best valley land permanently under water. The association turned thumbs down, and McConnell so informed the colonel who had presented the project. As this military gentleman folded his maps, he coldly stated one of the most arrogant twisteroos on record. "My agency represents the people of the United States," the colonel said. "This isn't Russia, and you folks out here can't push the people around."

The Salt-Wahoo Association kept plugging away on its theme of a complete, coordinated program for the whole valley. It produced several excellent booklets and movies showing how the job could be done and what it would mean. It particularly emphasized the point that while the big, disaster-type floods dramatized the problem, it was the poor condition of the land and the more frequent, smaller overflows that did the most damage in the long run.

Several years and several floods later, with the much-needed small dams still not built, McConnell and Liebers decided the valley needed a fairly large-scale demonstration of upstream flood control. "We've got plenty of stuff on paper; now we need it on the land," the Journal editor told everybody who would listen. The Salt-Wahoo Association tried to persuade the United States Department of Agriculture, through its Soil Conservation Service, to establish a modest but complete showcase of watershed renovation on Salt Creek. Although sympathetic, the USDA wasn't able to get down to cases. Since 1945 it had been doing somewhat similar work on 11 fairly large watersheds—so large, in fact, that progress was painfully slow. Why ask for more trouble? At a field hearing of the United States House Committee on Agriculture, McConnell made a strong pitch for a pilot-plant approach to upstream flood control in small, selected areas, so folks could see what could be done. The committee seemed impressed, but nothing happened.

Then when Dwight D. Eisenhower was inaugurated as President the McConnell-Liebers axis saw an opening and moved fast. Ike's campaign speeches had dwelt lovingly on his deep belief in local-State-Federal cooperation; he had said many kind words for conservation of natural resources. Why not slash straight across the redtape jungle and take the watershed plan to the White House?

McConnell asked 25 watershed leaders from different parts of the United States to meet him in Washington—at their own expense—to sell the pilot-program idea to President Eisenhower. On the appointed day, February 25, the boy from the country and his hastily gathered "citizens committee" put through one of the quickest coups in history. In the morning the group met with the President, who obligingly had called in all of his brass in the natural-resources field.

McConnell's committee presented its case. President Eisenhower agreed, saying the whole thing was right in line with his own ideas. He asked the group to take up the details with Congress and members of his "team," adding significantly, "If you run into any trouble anywhere along the line, you just come back and let me know."

After that it was a downhill pull. To be sure, some officeholders weren't exactly enthusiastic about breaking up a busy, busy Washington day to give this highly informal committee a hearing. One rather high official in the United States Department of Agriculture tried to excuse himself for the substantial reason that he had to testify before a House subcommittee. McConnell simply picked up the phone, called the chairman of the subcommittee and persuaded him to postpone the hearing. Slightly green and breathless, the official listened attentively to the group's ideas about the pilot-watershed program.

The 1-day blitz shook the situation off dead center. Under the leadership of Representative CLIFFORD HOPE and Senator FRANK CARLSON, both of Kansas, the 1st session of the 83d Congress was persuaded to add $5,100,000 to the Department of Agriculture's appropriations, earmarked for getting work started on pilot watersheds. In short order the Soil Conservation Service selected 60 small natural upstream basins in 34 States. By no coincidence whatever, weather-beaten upper Salt Creek was one of these, and soon the conservationists and engineers moved in and the roar of bulldozers echoed across the slopes.

Remember Jerry Kubik? Well, you ought to see his new farm today. It's still in the same old place, but the landscape is far safer and a lot more attractive. No longer do crop rows run up and down the hill. No longer do gullies eat the heart out of his land. Every field is a graceful pattern of broad, curving terraces that wind around the slopes, and all farming is on the contour. More of the land is covered with healing grasses, and the stubble from his cultivated crops is left on the top of the soil, holding it in place, encouraging insoak of water. Of course, even the best-conditioned soil can hold only so much moisture or can take in very little when frozen. But now the excess water, instead of dashing off, walks slowly around the hills in terrace channels. It is released downhill in specially prepared sod waterways, which route the runoff into the natural drainage system. Green blades of grass and the mat of sod act as brakes on the flow and strain out much of the sediment.

"It takes several days for the farm to drain now," the enthusiastic Kubik observed as we toured his place. "When the water leaves here, it's clear, not muddy."

Even the runoff doesn't flow directly into the creek. At the lower edge of the farm is a new, grass-covered Government dam which gives positive control of 3.6 inches of runoff from the Kubik farm and several others. The dam isn't a magnificent structure, not to be compared with the massive concrete-and-steel harnesses on major streams. But this farmer sees it as a thing of sheer beauty. He proudly drives visitors over the 850-foot-long top and points down to the 3½-acre permanent pond which he has stocked with crappies, bullheads, and blue-gilled bass. "The time I used to spend rebuilding flood-wrecked fences, now I use it for fishing," he said. And he added, "It's sure nice to have a good pond up here. For all our floods, this is dry country too much of the time."

The dam operates automatically. After the permanent pool fills up, the water reaches an inlet pipe which passes a reasonable flow downstream. In case of storms, the excess runoff collects behind the dam holding back 144 acre-feet of floodwater. Then the reservoir drains for about 5 to 7 days, slowly enough to keep the water within the stream channel just below.

The SCS engineer who explained the working of the dam was careful to point out that the structure was limited in its effect. "It will stop the smaller floods, the 10- and 25-year kind," he explained, "but a huge storm—the 100-year kind—would fill up everything and water would go over the spillway."

"But the flood still would be reduced?"

"By as much as the dam held back. Also, the water that gets away would carry a lot less of Jerry's farm with it."

Tidying up his farm called for a lot of work and expense on Kubik's part, although he was reimbursed, in part, by payments for soil conservation under the agricultural conservation program. He built 12 miles of terraces and is putting in 4 more miles now. This is a sizable earth-moving job, something like constructing a small road; it costs $150 to $200 a mile. Grassed waterways are costly, too, involving the laying out of carefully engineered channels and seeding them to tough-grass mixtures. Kubik has put in 8½ acres of these, investing $90 to $100 an acre in them. The detention dam, built by the SCS, cost $14,600, and although there was no cash outlay for Kubik, he furnished the land for the dam and pond, about five acres, worth $125 an acre at going prices. He also gave easement for flowage rights, meaning that he stands any damage when the flood pool backs up his draw. Altogether, he has invested perhaps $2,000, above any conservation payments, in the program.

Still, he's happy about the whole deal. "This pays off with a better farm," he said. "My land isn't going downhill now. My yields are 20 or 30 percent better than they would be without this conservation. We're making this a better community."

You get some idea of the vastness of the upstream job when you figure that Jerry Kubik's tiny bit of the landscape is just one-four hundred and fiftieth of the upper Salt area. Even for this small watershed the task is slow and complex, involving the building of 26 detention dams and more than 90 smaller structures to stabilize stream grades and control sediment. More than 750 farms must be completely planned for soil conservation, and this part of the assignment is just about half finished. Farmers must build enough terraces around the hills of this 109,000-acre watershed to reach from coast to coast and back to Lincoln again, more than 4,500 miles. Furthermore, all parts of the work plan must fit together in time as well as space. It isn't smart to put in a dam until the slopes above it have been healed and secured with grass and terraces; otherwise sliding silt would soon fill the reservoir.

The entire face-lifting job on the upper Salt is supposed to take 5 years and will cost a bit over $4 million. Uncle Sam will pick up the direct check for about $1,600,000 of this—mainly for structures and technical planning. Farmers in the watershed will put about $2,200,000 in work on their land, easements and rights-of-way. State and local governments are contributing necessary work along roads, worth around $200,000.

However, this large investment is expected to return benefits worth at least twice the cost on an annual-average breakdown, not including the value of peace of mind of the people on the land and in the valley towns. In evaluating such projects the Federal Government follows a complex formula which amortizes the installation cost over a 50-year period at going interest rates and also includes the probable expense of maintaining the works—although this latter is the responsibility of the local people. On this basis the average annual costs are estimated at $319,900, while the benefits are expected to be $718,628 a year, made up of $99,636 in reduction of flood and sediment damage, and $618,992 in increased productivity and more intensive use of the land.

More important, nationally, is the way such pilot demonstrations touched off a countrywide watershed-improvement boom. People from troubled valleys have swarmed over the pilot projects to see what is being done. In fact, so many carloads and busloads of visitors drive in Kubik's farm that he is hard pressed for time to do his chores. After seeing how the water is being saved and tamed, these scouts go home, asking, "How can we get this kind of program?"

This urgent demand from the hinterlands has swelled to such proportions that some bureaucrats are wondering if McConnell et al. didn't present them with a firm hold on the tail of a large grizzly bear. As one SCS official said, "There are about 16,000 small, upstream watersheds in this country, and it seems that most of them want us to plan a project for them."

It wouldn't be fair to give the leaders in the Salt-Wahoo area all of the credit for touching off this watershed revolution, although they certainly fired some well-aimed shots. In hundreds of upstream valleys, people have organized various kinds of associations to seek remedial action. The rising tide of pressure from the uplands finally overcame the obstructionists in the 2d session of the 83d Congress, when, with President Eisenhower's strong backing, the Hope-Aiken Watershed Protection and Flood Prevention Act passed and became known in the political trade as Public Law 566. As he signed it, President Eisenhower said "This act recognizes by law for the first time the great importance of upstream watershed protection. * * * For the first time, also, this act provides a broad program of Federal technical and financial assistance to such local watershed groups as are willing to assume the responsibility for initiating, carrying out, and sharing the costs."

The 566 program is a carefully limited one, seeking to avoid the incentives for the empire building which, in the past have led to bitter, costly warfare between Government bureaus. Federal aid is limited, under this act, to watersheds no larger than 250,000 acres. Only small dams, holding at most 5,000 acre-feet, can be built. Local organizations must provide the needed land, easements, rights-of-way and, in addition, must pay a fair share—50 percent by rule of thumb—of the installation costs of any works. The Bureau of the Budget and the USDA have added to the strictures with a pile of rules and regulations which, by actual measurement with my ruler, is 1 inch thick. A project submitted by a local group has to run the gamut of a State agency, the SCS, the Secretary of Agriculture, the Secretary of the Army, the Secretary of the Interior and the Office of the President. If the proposal survives, it goes to Congress, waits 45 days for possible disapproval, and, if there is none, work can begin.

Hardly was the ink dry on the law when applications began pouring in from States, and legislatures began to pass laws for local cooperation. More than 20 States had enacted different laws on the subject at last check. To date, the Soil Conservation Service has received 427 applications from watersheds in 42 States, and an additional 400 are in process. Nobody knows how many more are being generated out in the hills. Officials hope that at least 70 well-planned projects will be through the mill and be ready to go during the next Congress.

Also, something of a miracle came to pass recently when the Army engineers and the United States Department of Agriculture shook hands and agreed that there is need for both upstream and downstream flood control, and further, that the two methods should be fitted into a sensible pattern that will give the country the most effective and most economical protection. For example, the engineers have taken a new look at the Salt-Wahoo Basin, and have proposed to interlock their work with that on the upper Salt. The coordinated approach may make it possible for the SCS to eliminate 11 of their 26 proposed dams, and the engineers now figure that they can get their job done with 12 medium-sized dams instead of 17.

All of this doesn't mean that the United States can now sit back and relax, confident that the whole erosion and flood problem is being met. The fact is, we are generations behind our needs, and catching up is going to be a huge assignment. On our main rivers we have made heartening progress. The Army Engineers estimate that the total downstream potential damage of $911 million a year has been cut more than half by their control works now in full or partial operation—the bulk of them built within the past 20 years. This has cost $3,600,000,000 to date, out of a total of $9 billion authorized by Congress for active projects. Meanwhile, our headwaters streams are dealing out an estimated $677 million in damages per year, but we've just barely started to curb them. Total Federal appropriations for upstream work amount to $73 million—less than the interest on the big main-stream dams.

Out in Lincoln, where Nebraska's skyscraper capitol looks over the Salt-Wahoo basin, Ray McConnell doesn't regard his battle as won. He's unhappy because the bureaucrats loaded the new Watershed Act with so many regulations that it is slow and unwieldy. "That isn't the way to do it," he says. "You need to get the work started out on the land and along the creeks. Then folks become interested and it grows." No doubt Washington will be hearing about this.

Eighty Years of Progress by Cooper's, Kenosha

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, government has not provided the high standard of living which the American people enjoy today. It has been the private initiative of foresighted men and women who have built our great country from ocean to ocean and from Canada to the Gulf of Mexico. Many individuals have been willing to risk their money in private enterprise in an effort to serve the needs of our people.

One of the pioneer industrial organizations in the United States is Cooper's, Inc., Kenosha, Wis., and I am proud to say it is located within my congressional district. This firm 80 years ago was founded by a retired Methodist minister, Samuel T. Cooper. He had one simple idea which was to manufacture a better product for men. That idea is personified today in the present corporation with 5 manufacturing plants and more than 10,000 retail outlets.

Mr. Speaker, under leave to extend my remarks I am including an article that appeared in the Kenosha Evening News last May 1, which relates the human interest story of Cooper's, Inc.:

COOPERS, INC.

Many of our Nation's great corporations have the same beginning. They are companies that began humbly—with a man, with an idea, and with courage to make the idea work.

Coopers is such a company. The man was a retired Methodist minister, Samuel T. Cooper, and his idea was simple: To manufacture a better product for men. This was in 1876, and 80 years later the idea which saw the initial founding of Cooper, Inc., has been nurtured into a multi-million-dollar corporation with 5 manufacturing plants, 10,000 retail outlets, licensees in 15 foreign men's underwear industry: Jockey.

EXCELLENT REPUTATION

But most of all the company during the past 80 years has earned a reputation for quality and leadership unmatched in the men's apparel field.

It was in St. Joseph, Mich., the Samuel T. Cooper founded the company. With his 3 sons and 6 old and battered knitting machines, S. T. Cooper & Sons began manucountries, and the most famous name in the facturing men's boot socks.

Gradually, the company expanded its line of products into a full line of utility hosiery for men, women, and children. For example, the first long, black "Ironclad" hose for children were Coopers' products.

Then, in 1892, Samuel T. Cooper died. The three sons, Henry, Willis, and Charles, disposed of the St. Joseph interests and moved to Kenosha, where they established hosiery and underwear manufacturing operations. The untimely deaths of Willis and Charles in Chicago's Iroquois Theatre fire in 1903 left only Henry to direct these plants, which he did until 1914. That year, he withdrew from the hosiery business in order to concentrate on his underwear plant, the Cooper Underwear Co., now Coopers, Inc.

President of the company today is R. Y. Cooper, a grandson of the founder.

The history of Coopers boasts an impressive list of "firsts," both in products and in marketing techniques. The company's most famous product—and the one for which it is best known today—is its line of "Jockey" brand knit briefs introduced in 1935.

JOCKEY FILLS THE BILL

Development of the Jockey brief culminated a product research program to find a product meeting three basic requirements: (1) it must fill a real need, (2) it must be popular priced, and (3) it must be marketable in volume at a profit.

This search was climaxed on a cold, snowy day in January of 1935, when a Chicago department store featured the brandnew Jockey knit brief in its windows. Crowds began forming at the counters inside, and extra salesmen were diverted to meet this traffic. The store placed a call to Kenosha, and special shipments of Jockey briefs were dispatched by train. In spite of the weather and a normally poor selling season, the entire stock was sold out before the day was over. Similar results were reported on following days from stores in other parts of the country. Coopers had indeed achieved its greatest triumph.

The original idea came to Arthur R. Kneibler, now senior vice president, from an abbreviated type of men's swimming trunk then in vogue on the French Riviera. From this, Coopers' designers fabricated a new kind of underwear made of knit fabric that fit comfortably, provided perspiration absorption, and yet was porous enough to let the skin "breathe."

The company proved more than equal to the task of making the modern knit idea—the Jockey idea—an acceptable one by the Nation's male population.

WIDELY ACCEPTED

Coopers launched into hard-hitting advertising and merchandising programs aimed at helping "Jockey" retailers successfully introduce the product to their customers. Through these first and following promotions, millions of men have been turned into Jockey customers. It is estimated that almost half of the Nation's male population now wears underwear of the knit-support type, originally introduced by Coopers back in 1935.

The success of Jockey has progressed far beyond the United States. Foreign underwear manufacturers, recognizing the importance of Coopers' development, received permission from the Kenosha Co. to manufacture "Jockey" in their own countries, on a royalty basis. Agreements were subsequently made with 15 foreign manufacturers and

Jockey underwear currently is produced and sold in Canada, Australia, Great Britain, New Zealand, Switzerland, France, Colombia, Italy, Denmark, South Africa, Germany, Austria, Ireland, Mexico, and Venezuela. Additional overseas distribution in other areas was established through foreign agents to Central America, the West Indies, South America, the Far East and Pacific isles, parts of the Near East and Army post exchanges and Navy ships stores.

Coopers first gained its reputation as an industry leader in 1910 when it patented the Kenosha Klosed Krotch, a feature that revolutionized the design of the then-popular union suit by eliminating the drop seat. This was advertised in the Saturday Evening Post in 1911, an historic moment in itself, for this ad is believed to be the first national advertisement for men's underwear.

MEET CHALLENGE

This progressive philosophy, too, was responsible for the company's continued success in later years. By 1915, the company—like all firms specializing in knitted underwear—was threatened by the introduction and sudden popularity of woven union suits. Coopers met this challenge by producing woven underwear with a knit crotch featuring the famous Kenosha Klosed Krotch design.

And, when servicemen during World War I became accustomed to two-piece underwear, Coopers added woven shorts and knit shirts to its line.

But the most serious threat to the company's position, during the 1920's and early 1930's, proved beyond all doubt the caliber of the company and its ability to assert leadership over the underwear industry.

At this time, many new underwear companies sprang up, using sweatshop labor and inferior fabrics to market products at prices quality companies like Coopers could not match. Coopers needed help badly, and the company turned to Arthur R. Kneibler in 1928.

A man with a broad background in advertising and selling, and with foresight matching the company founder, Kneibler surveyed the market and made certain recommendations which remain in force to this day. These included the company's present sales concept of retail-mindedness, which has grown into the industry's most complete and most effective program of selling not only merchandise but sales idcas that help the retailer sell his goods. Many a retailer, during the depression period of shrunken profit margins, became an eternal friend of Coopers because of the company's efforts to help him move merchandise.

It is this retail-mindedness that must be credited with a major role in keeping Jockey knit underwear on top in the years since its enthusiastic reception in 1935.

WIDELY ADVERTISED

No product in the history of the men's underwear industry has been merchandised so thoroughly and so continually. Jockey is, and has been, the most heavily nationally advertised item of its kind. The retailer has been supplied with every type of tested, effective merchandising tool to help move the product.

Constant innovations are made. For example, Jockey became the first prepackaged underwear, and it is only recently that other manufacturers, recognizing the trend toward self-selection, have followed suit. And, this packaging program led Coopers to design the first floor dispensers for displaying its products in the store—making self-selection even easier.

From the original Jockey brief have come additional items which have made the line the most complete of its type for men and boys. The Jockey brand now features, in addition to briefs, lowers of varying lengths, including the "Midway," "Over-Knee," and longs. And to go with the lowers, Coopers introduced the Jockey undershirt and T-shirt, which include contour-cut models to fit neatly under the lowers.

Additional research has led to the introduction of Jockey products in improved cotton fabrics such as Durene and in synthetic fabrics, such as stretch nylon. Recently, the ultra-high quality blend of Egyptian cotton and Irish linen, called "mercelin," was added to the line of Jockey underwear.

EXPAND FACILITIES

As Jockey has grown to become a byword throughout the world, so have Coopers expanded its facilities to meet the demand. Today, Jockey products are manufactured at Belzoni, Miss., and Millen, Ga., in addition to the original and expanded Kenosha headquarters.

Two other manufacturing plants at Wadley, Ga., and Carlisle, Ky., are devoted to the manufacture of other Coopers products for men.

Extensive distribution facilities are needed to service Coopers' 10,000 retail outlets, and this is accomplished through strategically placed distribution points at Los Angeles, Calif.; Seattle, Wash.; Lambertville, N. J.; Cedartown, Ga.; and Kenosha, Wis.

The company has much in which it takes a great deal of pride, but no phase of its operation is more noteworthy than its employees. As Coopers was founded and remained a family company, so have its employees remained as part of a happy family. Close to 400 employees at the Kenosha headquarters, out of a total of 750, have been associated with Coopers for 15 years or more—a remarkable record.

Officers, in addition to R. Y. Cooper, president, Arthur R. Kneibler, senior vice president, and G. S. Lance, secretary-treasurer, are: Robert F. Cooper, vice president in charge of production planning, procurement and special assignments; J. H. Wyss, vice president in charge of sales and advertising; H. L. Fredericksen, vice president in charge of manufacturing; and Oscar A. Wilkerson, Jr., vice president in charge of research and development.

The board of directors is comprised of R. Y. Cooper, Gilbert S. Lance, A. R. Kneibler, and Harry H. Wolf.

The company has grown and prospered with a simple philosophy of service to its customers, the retailers, and service to the consumer, the end-users of Cooopers and Jockey products. It is the careful maintenance of this philosophy, coupled with the progressive, youthful spirit of Coopers' management, gives promise of even greater growth in the years to come.

The story of Coopers dramatically shows how a good product, well merchandised, can add new meaning to a word that once meant only "a man who rides horses," and which today also signifies the world's most famous brand of underwear: "Jockey."

America Fooled

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Marys, Pa., Daily Press of July 17, 1956:

AMERICA FOOLED

This week's issue of U. S. News & World Report hints there never was a real break between the Soviet Union and Marshal Tito, that this country as well as other free world nations had their eye teeth yanked out falling for that chestnut.

As long ago as 4 years this country editor hinted that Tito was fronting for Joseph Stalin and the goods he was getting from United States for free were ultimately finding their way into the Soviet Union, but in that small town papers have little or no influence with the big brass in Washington the hint here never got any further than the paper on which it was printed.

When an American military mission was refused permission last year to accompany a shipment of military goods sent free of charge to Mr. Tito it became apparent then the marshal was playing ball with Russia.

This finally came out in the open this year when Tito got the red carpet treatment in Moscow and told audiences in Russia there was no differences between his country and Russia, finally attaching his signature to an agreement that in event of another war his soldiers and those of the Soviet Union would be found marching together, shoulder to shoulder. What more evidence does America want that Tito and the Kremlin bosses are as close together as Sunday midnight and Monday morning?

It was recently brought to light United States contemplates sending 380 jet planes to Yugoslavia at a time our own National Guard lacks this type of military craft. How nutsy can a nation get?

Sometime, says Dr. Alfred P. Haake, Uncle Sam may wake up from his dream world and take a more realistic view at world affairs.

This noted economist has this so say about America and Yugoslav relations:

"One wonders when we open-faced, fairy-loving Americans with our penchant for casting loaves of bread on the waters for later crumby returns, will ever realize the difference between being charitable or cooperative and being just a plain silly fool.

"Uncle Sam, with his long whiskers, really a pretty fine old gentleman and a credit to his bringing up, has been caricatured in many ways, but it remained for Marshal Tito of Yugoslavia really to show up Uncle Sam in the juvenile and uncomfortable role of 'Uncle Sap.' And the devil laughed.

"There was a time when it was undoubtedly wise for the United States to come to the aid of Tito. When the recently debunked and excoriated Stalin expelled Tito from the 'Communist family' in 1948, there was danger of invasion of Yugoslavia by its Communist-controlled neighbors—Rumania, Bulgaria, and Hungary. Such an invasion was highly distasteful in prospect to all of us and could have touched off another world war.

"The help we then gave Tito, and of which he was given without condition or consideration. That was the error. We asked no promises and laid down no conditions or terms, but just opened our hearts and pocketbook to the callous dictator of Yugoslavia, despite the wanton murder of five young American airmen who lost their bearings because of weather and flew over Yugoslavia. We accorded to the sensibilities of American mothers the same cynical lack of moral consideration which we showed for China when that country was sold down the river at Yalta.

"So we built up Tito as a hoped-for bulwark against Communist aggression, a useful future ally against a stab in the back through Yugoslavia. Well over a billion dollars have been sucked from the pockets of American taxpayers, as a gift to stanch old Tito.

"And now we have our reward. Bulgy Nikita Khrushchev has torn to shreds his

former boss and partner, Josef Stalin, and declares that Tito was right when he insisted that Yugoslavia—that is, Tito—must be free to rule itself instead of being a Stalin satellite. Tito accepts confirmation of his now-recognized high place in the Communist hierarchy, and openly announced that Yugoslavia will never again be split from the Soviet Union by misunderstandings."

Sermon by the Right Reverend John K. Cartwright, Requiem Mass for Fallen Workers of Poznan, St. Matthew's Cathedral, Washington, D. C., July 14, 1956

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. BOLAND. Mr. Speaker, last Saturday upon invitation of the Polish American Congress, I attended a requiem mass for the workers of Poznan who were shot down in cold blood just a few weeks ago. These workers, Mr. Speaker, were merely asking for more bread to feed their families and themselves. A little relaxation of the iron first of totalitarianism that has ruled their lives gave them cause to believe that their request would not go unanswered. But tragedy stalked their demand. Cold, naked, brutal mass murder was the answer that the Communist Polish Government handed to the courageous people who sought a better deal for the people of Poland. June 28, 1956, is a day that will be remembered in the history of Poland—a day of courage for Polish patriots and a day of infamy for the present Polish Communist leaders.

Mr. Speaker, the sermon of Monsignor Cartwright delivered at the requiem mass points out some specific lessons of the Poznan uprising. It pays tribute to the faith and spirit of the Polish people. I commend it to the attention of the House and ask unanimous consent that it be included in the RECORD.

I also ask unanimous consent that an editorial from the Catholic Standard, the official diocesan Catholic publication of Washington, be printed along with Monsignor Cartwright's sermon.

The sermon and editorial follow:

SERMON DELIVERED BY THE RIGHT REVEREND JOHN K. CARTWRIGHT IN ST. MATTHEW'S CATHEDRAL, JULY 14, 1956, AT THE REQUIEM MASS FOR THE FALLEN WORKERS OF POZNAN

We have gathered this morning according to our Catholic custom to celebrate the Sacrifice of the Mass for the repose of the souls of those who died in Poznan. On this occasion, as on all similar occasions, we carry out the church's practice and injunction to pray to Almighty God for the remission of sins and for the purification of the faults of those who have passed on. It is not ordinarily in the spirit of the church to speak at the Requiem Mass in terms of eulogy. Yet on this occasion we feel that exception can very justly be made inasmuch as these heroic people laid down their lives for their fellow citizens and for the freedom of the world and, therefore, we feel more than usually confident that God has received them into his reward and peace.

The action taken by these heroes at Poznan electrified the world and taught it in a very vivid fashion certain lessons that needed to be inculcated anew. In the first place, their revolt against Marxian tyranny gave a further blow to the Marxist delusion that has captivated the minds of so many people in our world today. In Marxian theory, communism appeals above all to the workers whose lot it professes to improve and to youth since it holds out such rosy hopes of the future. The Poznan revolt, however, was not conducted by the privileged classes but was specifically a revolt of workers who were weary of the impostures of communism and of young people who made it clear that the deceptions of Marxism had had no hold upon their mind.

The second lesson of Poznan was to thrill the world with a new instance of human bravery. We are so much beset at this time of the world's history with the repetition of dull, political formulas that the simple beauty of a courageous act seems somehow new to us and so the whole world thrilled at this simple deed of human courage.

Thirdly, the revolt, although not immediately and completely successful, has undoubtedly awakened the hopes of many for freedom. Millions of people behind the Iron Curtain have heard of this and we can be sure that their confidence and their hopefulness for the future has been awakened and made stronger.

Lastly, among the free peoples and, particularly in the United States, the revolt has rendered a service in arousing those who needed to be aroused (and there are many such) from the opiate dream of acquiescence in coeixstence with the Communist tyranny.

Communism has gone on for so long now that many are contented to regard it as part of the permanent furniture of the world. It is in reality a detestable and unbearable tyranny which must at long last be ended. We now realize better than ever before that the spirit of Poznan, not the spirit of Yalta, holds the secret for the future and that communism's day will be over.

In the year 1963 we shall arrive at the close of the first millenium of Poland's history. The history of Poland as a nation and as a Christian people begins with the dedication of the country to Christianity and Western culture by Mieczyslaw in 963. During those thousand years Poland's history has been glorious not so much with triumphs as with the continued reappearance of courage after constant failures. Poland's efforts for independence have been time and again frustrated, but they have never ceased or died. Meanwhile Poland has made countless contributions to the freedom and peace of other countries as in 1683 when Sobieski relieved Vienna or as in the time of the American revolution when Pulaski and Kosciusko were among the first heroes of our independence or as in the Second World War when the conspicuous bravery of the Polish airmen was an indispensable factor in the English resistance to the Nazis. There is good hope that Poland's second millenium will begin with freedom and peace. But more than this, we may hope that freedom will have a glorious contribution to make to the general civilization of mankind. It was recently said that within 10 years the Communist countries will establish liberal constitutions and governments. However, liberal constitutions are not enough. There must be at their heart the inspiration which originally created them and without which they cannot flourish, namely, the inspiration of faith and religious principle. Given the abolition of communism these Western countries will need, therefore, not merely liberal constitutions but the spirit and heart which make liberal citizens. In giving them this we may hope that Polnad will take the lead and that her second millenium may be glorious not merely for courage in defeat and for hope that never dies, however much it may be deferred, but for freedom, peace, and leadership in the spiritual rebuilding of a devastated world.

[From the Catholic Standard of July 3, 1956]

WHAT CAN YOU DO?

"What can I do about it I really wish that there were something I could do about it." These were the laments of practically every able-bodied, loyal American as he read of the heroic Poznan rioters. It was the same reaction he had when he heard of the famous riots in East Germany on June 17, a few years ago.

That feeling of resentment and frustration only increased when we learned that the Polish rioters will be tried as subversive agents of a capitalist (American) power. This hideous hypocrisy only adds to the feeling of helpless resentment.

There is something that we can do to show our sympathy towards the Christian patriots of Poland and to ask God's omnipotent help to sustain them: we can attend the mass at 10 o'clock tomorrow morning in the cathedral and pray for that intention.

We must not underrate the power of God's grace through prayer and the great power of sympathy. The Polish people, made of heroic stuff, are capable of tremendous and sustained sacrifices for the benefit of all mankind if the free Christian world helps them by prayer and sympathy. The unparalleled resistance of the Poles to atheistic communism cannot be explained simply by natural causes and factors. Every report from Poland brings the same tale of supernatural persistent devotion to God and freedom in every rank and class of people.

The recent revolt or riot of the people deserves an added accolade since it was solely the action of workers who had no hope of winning a victory. It was a magnificent gesture of defiance of tyranny that deserves the admiration and the gratitude of all.

We can render that gratitude by attending mass in St. Matthew's Cathedral and praying for God's blessing on these and the millions of others who are suffering persecution for their devotion to God and freedom.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. PASSMAN. Mr. Speaker, I have obtained a leave of absence to be in Louisiana in my congressional district on official business until Saturday and, for this reason, I probably will not be present to vote upon the final passage of H. R. 627, commonly known as the civil rights bill.

I want you to know, however, that I am violently opposed to the enactment of this measure by the Congress of the United States.

If enacted, it would create a new department for the Justice Department staffed with several hundred attorneys whose sole purpose would be, under this act, to handle free of charge civil-rights cases against our people.

Parties on the other side of any civil-rights controversy are not provided in

any way with financial or legal help in defending these actions.

In addition to this, the bill would set up a Commission on Civil Rights to be appointed by the President of the United States. We have had these commissions in many instances and they have not worked and they are not good. My people do not want any such arrangement and I vigorously oppose this provision.

There are other provisions in the bill to which I also object most vigorously. Generally speaking, the bill is not good and I want no part of it. I hope it is defeated by the House of Representatives and returned to the calendar to die a musty death.

Poll Results

EXTENSION OF REMARKS
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. CORBETT. Mr. Speaker, in 1939 while a Member of the 76th Congress, I began to ascertain the thoughts of the citizens of my district by means of a written questionnaire. Since that time, while a Member of this body, I have conducted at least two such polls each session. The response of the people has always been excellent.

We send one questionnaire to each family that is included on the lists of permanently registered voters. My district, northern metropolitan Pittsburgh, has over the years been fairly equally divided between Republicans and Democrats. Likewise, it is properly classified as industrial and residential with considerable farming and coal mining included. Economically, it ranges from very wealthy to poor. Ethnically it is extremely varied.

Enough answers are always received to constitute a referendum. These replies keep me well informed of what my people are thinking on many vital national issues. They also serve as an excellent antidote for false information advanced by pressure groups. We find the results most interesting and informative. I trust my colleagues and anyone else who studies them will find them the same.

Herewith I include the results of the poll just completed and the one which was finished in February of this year:

POLL RESULTS, JULY 1956

1. Do you favor any increase in the number of qualified immigrants we will permit to enter the United States annually?. Yes, 27 percent; no, 73 percent.

2. Should the Federal Government use every means short of force to guarantee equal rights and privileges to all citizens? Yes, 75 percent; no, 25 percent.

3. Would you favor increasing veterans' pensions and compensation payments and liberalizing eligibility requirements? Yes, 42 percent; no, 58 percent.

4. Do you favor Federal financial aid for school-construction programs? Yes, 73 percent; no, 27 percent.

5. Do you object to the proposed increase of letter mail to 4 cents and airmail to 7 cents? Yes, 29 percent; no, 71 percent.

6. Do you object to receiving advertising matter through the mail? Yes, 54 percent; no, 46 percent.

7. Do you believe that magazines and newspapers should be delivered by the Post Office Department at something less than cost? Yes, 12 percent; no, 88 percent.

8. Do you believe our civilian-defense program is woefully inadequate? Yes, 77 percent; no, 23 percent.

9. Are you pleased with the new pay-as-you-go Federal highway program? Yes, 87 percent; no, 13 percent.

10. A sizable budget surplus is apparent. Would you prefer a personal income-tax reduction to a reduction of the national debt? Yes, 45 percent; no, 55 percent.

11. If you are inclined to vote for Eisenhower, are you satisfied with NIXON for Vice President? Yes, 84 percent; no, 16 percent.

12. If you are inclined to vote for Stevenson or Harriman, would Kefauver suit you for Vice President? Yes, 85 percent; no, 15 percent.

POLL RESULTS, FEBRUARY 1956

1. Is a tax cut more appealing to you than a balanced budget? Yes, 15 percent; no, 83 percent; no opinion, 2 percent.

2. If a budget surplus is apparent, would you prefer a tax cut to debt reduction? Yes, 29 percent; no, 68 percent; no opinion, 3 percent.

3. Should the United States resist with arms Communist aggression anywhere the people attacked desire help? Yes, 52 percent; no, 38 percent; no opinion, 10 percent.

4. Should the $25 billion interstate-highway program be financed with a combination of increased use taxes and bonds? Yes, 67 percent; no, 22 percent; no opinion, 11 percent.

5. Would you object to paying 4 cents, instead of 3-cent postage, for nonlocal first-class mail (ordinary letter)? Yes, 26 percent; no, 73 percent; no opinion, 1 percent.

6. Do you think we are moving with satisfactory rapidity to establish full civil rights for everyone? Yes, 80 percent; no, 15 percent; no opinion, 5 percent.

7. Do you think we are going too far, too fast with the reclamation and irrigation program? Yes, 25 percent; no, 59 percent; no opinion, 16 percent.

8. Do you believe that the proposed $4½ billion foreign-aid program should be cut 25 percent or more? Yes, 77 percent; no, 16 percent; no opinion, 7 percent.

9. Should the Government encourage and guarantee private health-insurance programs? Yes, 47 percent; no, 47 percent; no opinion, 6 percent.

10. Do you agree that the administration's farm price-support program is an improvement over previous programs? Yes, 70 percent; no, 15 percent; no opinion, 15 percent.

11. Eisenhower says our defense preparations are adequate. Do you agree? Yes, 68 percent; no, 19 percent; no opinion, 13 percent.

12. Do you believe that Eisenhower can and should stand for reelection? Yes, 64 percent; no, 22 percent; no opinion, 14 percent.

Dr. Ray W. Gifford, Jr.

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. PILLION. Mr. Speaker, I am informed that Dr. Ray W. Gifford, Jr., is being released from active Navy duty on August 1, 1956, with the rank of lieutenant commander. He will resume his duties as consultant in medicine at the Mayo Clinic.

I know that many Members like myself who have had the occasion to consult with him on medical matters deeply regret his leaving his position as assistant attending physician to the Capitol physician's office.

I have been very impressed with the patience, thoroughness, and all-around competence of his diagnosis, treatment, and medical care.

Dr. Gifford is a member of the permanent staff of the Mayo Clinic and is an associate member of the American College of Physicians. We have been fortunate in having his background and experience available to the Members of Congress.

His departure from the staff of the Capitol physician's office will be a loss to Congress and I am certain that every Member of Congress who has been his patient will join in this expression of gratitude for a job well done and best wishes for the future.

Death of Federal School Aid Bill

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 5, 1956

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of July 17, 1956:

DEATH OF FEDERAL SCHOOL AID BILL—ACT BLAMED ON VIRTUAL FOUR-PARTY SYSTEM, AND BLOC IS EXPECTED TO CONTINUE

(By David Lawrence)

Who killed the school bill with its billions of Federal money for education? That's still an unanswered question on Capitol Hill, where it may become known as the "mess of 1956."

It's too bad the "right to know" doctrine—espoused by the House committee which is seeking to rid official Washington of its tendency to suppress news—doesn't extend to the behind-the-scenes maneuvers of party leaders in Congress who pull the strings.

For the full story of what happened ought to be told. Four explanations are being offered. One is that the segregationists of the South killed the bill. The other is that the integrationists of the North did it. Another is that those who didn't want any Federal interference in the financing of the schools were influential in the result and that they were alarmed because of recent Supreme Court decisions whittling down States rights and increasing Federal authority.

But Senator HUMPHREY, Democrat, of Minnesota, has a simpler explanation. He blames it all on "President Eisenhower's health or recuperation or concern over personal political problems" which are supposed to have prevented him from "exerting some personal influence and leadership."

Eisenhower had already gone a long way in trying to get the bill passed. He had said once before that anything like the Powell amendment, denying Federal aid to schools in Southern States which do not adopt integration, shouldn't be tacked on to the bill. This was a daring expression on his part—a concession to expediency over and above principle.

But what did happen? Representative ADAM CLAYTON POWELL, Democrat, and one of the Negro leaders of the country, offered his amendment anyhow. It presented an issue which Republican Congressmen from districts where there are many Negro voters couldn't dodge. No amount of persuasion from Eisenhower could keep them from voting for the Powell amendment.

As for southern Congressmen, they abstained from voting so as to make sure the Powell amendment supporters would have a majority. They wanted the final measure to be unpalatable on every side.

But there are northern Republicans—about 65 of them—who don't believe in Federal control of education and they too, voted for the Powell amendment because they knew it would help kill the bill. On final passage, they joined with the southern Democrats to make a majority against the entire bill.

Also important was the action of northern Democrats who helped to defeat amendments, proposed by Republicans, allocating the funds on the basis of the needs of the States. This principle previously had been indorsed, but the Democrats repudiated it. The final bill, therefore, was unsatisfactory to northern Republicans who favored Federal aid and southern Democrats who didn't, and thus was readily defeated.

It is a bit bewildering to see some of the so-called liberals ignoring what the southern Democrats did in helping the Powell amendment to pass or what the northern Democrats did in defeating the Republican amendments. And yet the defeat of the bill is characterized as a case of bad Executive leadership.

The truth is there are 4 parties in Congress today. There hasn't been a 2-party system for 2 decades, and recent decisions of the Supreme Court curtailing States rights mean that the 4-party bloc system will remain for many more years to come.

A significant aftermath of the school bill controversy is the discovery by southern Democrats of how near they came to being tricked by the argument that, if the measure were passed without the Powell amendment, they should have no objection to it. For the fact is that Federal funds could be withheld even without the Powell amendment or its counterpart. The administration has a legal opinion from the Department of Justice which is being used every day by the President's interracial commission. It claims the right of the Federal Government at any time to cancel any contract with any agency, public or private, which permits discrimination in employment on the basis of "race or creed or color or national origin."

The text of this important opinion has never been disclosed though presumably the public has a right to know the exact contents of such an important document that supports an executive order.

It's the knowledge that a threat exists to use Federal authority—even in the absence of a Powell amendment—to withhold funds from schools in the South which may prevent any school bill from ever being passed. It may lead to a demand for a specific stipulation in the law declarating that nothing in this or in any other law gives the Federal Government the right to withhold funds except for the reasons given in the measure itself.

What is surprising about the whole controversy is the assumption made by the "liberals" that those who voted for the Powell amendment should be reprimanded by President Eisenhower for voting their convictions. They are being upbraided for expressing themselves conscientiously. Because they are mostly Republicans, Eisenhower is being held responsible for their votes.

One wonders who is responsible for what the southern Democrats did and for the votes of those Democrats who don't want Federal interference in schools on any score. The theory that the Presidency is a sort of benevolent dictatorship and that the Congress must become a "rubber stamp" has lately become popular doctrine with many of the so-called liberals.

The Civil Rights Bill Confusion Confounded Attack on States Rights

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the Washington Evening Star of July 18 had a pertinent editorial entitled "Alice Outdone." This editorial points out that the civil rights bill is before the House because of political pressure. It suggests that the bill might pass the House but will not pass the Senate and the editorial goes on to say "It is a good thing, in our judgment, that it will not."

Mr. Speaker, under leave to extend my remarks I am including the editorial in question:

ALICE OUTDONE

The expectation is that the House, with both Republicans and northern Democrats reacting in the usual way to political pressure, will pass the civil-rights bill. There is an equally strong expectation that it will not pass the Senate.

It is a good thing, in our judgment, that it will not. For anyone who takes the trouble to read the record of the House debate cannot fail to come away with the firm impression that few, if any, House Members fully understand the implications of this far-reaching bill.

For example, Representative CELLER, Democrat, of New York, one of the bill's sponsors, was asked whether it gives the right to sue members of a State legislature for damages for acts done in the exercise of their sworn duty. Mr. CELLER wasn't sure. "That is a difficult question to answer," he said, "but I am inclined to believe it would not."

There were many questions, and no satisfactory answers, about a provision which gives the Attorney General autnority to intervene when someone is "about to engage in an act" which might curtail a civil right. Representative TUMULTY, Democrat, of New Jersey, a civil-rights supporter, was disturbed by this and wanted to know what it meant. Representative FULTON, Republican, of Pennsylvania, answered him with this question: "Which part of the Democratic Party or what Democratic Party are you representing?"

Perhaps the most appropriate exchange came between Mr. CELLER and Representative DIES of Texas. Mr. DIES had been asking some needling questions designed to focus attention on what he regarded as flaws in the bill. This reminded Mr. CELLER of an exchange between Alice and Humpty Dumpty in which Alice asked: "How can you make words mean so many different things?" To which Mr. DIES responded: "Did Alice write this bill?"

It is our understanding that the Attorney General wrote the bill. But maybe Alice, or Humpty Dumpty, had a hand in it. At any rate its words mean, or could mean, so many different things that we think it ought to undergo careful, thorough, and searching study before it ever becomes law.

Miss Universe Contest at Long Beach Promotes World Understanding

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. HOSMER. Mr. Speaker, this evening, at Long Beach, Calif., part of California's 18th Congressional District, which I have the honor to represent, Miss Universe for 1956 will be chosen from comely contestants from many lands of the free world. The annual Miss Universe contest, sponsored wholly by individuals and businesses in the southern California area, is much more than a mere beauty pageant. Free nations throughout the world select and send their fairest representatives to a free America for this important event. Except for the chambers of the United Nations, probably no spot in the world concentrates so many nationalities together for a common purpose. By this means a greater understanding and a more peaceful intention flows between their countries.

These thoughts have been expressed more adequately than I am able to do in the following article by Spencer Crump appearing recently in the Southland magazine of the Independent-Press Telegram newspaper:

U. N. OF BEAUTY POWERFUL WEAPON FOR PEACE

(By Spencer Crump)

One of the world's greatest forces in the struggle for world peace, religious understanding and betterment of woman's position is in session here in Long Beach.

The Miss Universe beauties are damsels who would provoke an admiring whistle in any language.

But the Miss "U" girls are more than beauties, as their charms break down the barriers of international boundaries, language variations, differences in religion, and distances between continents.

As the beauties meet for the Universe festivities during the coming week, new understandings will develop between the girls for them to carry back to those at home.

These girls, as the stars of the fifth—and biggest yet—Miss Universe Pageant will be joining in a United Nations of Beauty.

As in past years, the spectacle of the world's most beautiful girls will be implemented by such inspiring and dramatic events as:

Miss France and Miss Germany, whose nations 3 times in 75 years warred, helping each other primp before parading before the judges.

A beauty of Greek Orthodox faith, an attractive Roman Catholic girl from Italy, and a charming Protestant contestant from Sweden forgetting differences in their interpretation of Christianity to help each other adjust ribbons before posing for photographers.

A curvaceous beaty from humid Panama and a sparkling damsel from cool Iceland finding that variations in climate mean nothing when it comes to holding mirrors as they adjust coiffures just before parade time.

An Austrian beauty demonstrating the fine points of her native waltz as a Brazilian contestant proudly shows the intricacies of her nation's rhumba.

A winsome lass from Iowa and an oriental beauty from Japan forgetting Pearl Harbor as they help each other to register.

A contestant from Africa and a competing beauty from Australia forgeting the isolation of different continents as they try to figure out American slang.

A shinto from Japan, a Buddhist from Ceylon, a Christian from South America, a Moslem from Turkey, a Jew from Israel and a Taoist from Hong Kong forgeting religious differences as they exchange hints on how to parade before the judges.

And a gal from Brooklyn and a miss from Texas forgeting mileage distances as they kid each other about their accents.

All of these things add up to make the Miss Universe Court of Beauty a virtual United Nations in itself, leading to more complete understandings of the countries which sent the girls.

While the public whistles and claps and the girls develop friendships to return to their homes, the universe spectacle takes on another importance in the field of human relationships.

It is the appreciation of womanhood itself.

Particularly in the Orient, and to a considerable degree in Europe, women have traditionally been accorded a secondary place in society.

In the Far East, custom in many places has it that women must walk behind their men in public places and cannot own property. In Europe, women have been taught that their mission in life can be litle more than home and children.

But, thanks in a large degree to the Miss Universe Pageant, new advantages, acclaim and appreciation of beauty is coming for womanhood.

Japan, where even the most attractive and brilliant girls traditionally were accorded second place in the family, has entered a contestant since the pageant started.

Its attractive entries have been hailed in America and in Japan have won new respect for womanhood as a means of national respect.

India entered a beauty in the first Miss "U" contest, but national religious feeling prevented subsequent entries. However, the controversy stirred up discussions relating to improvements of the rights of women.

Similarly, Ceylon has been noted for its attractive contestants but is not entering this year because of Buddhist religious injunctions. Former entries brought new acclaim for women in Ceylon; the injunction caused serious discussion of women's rights.

In Iceland, tradition has acclaimed women on their intellectual ability. The Miss "U" pageant has stirred thoughts of their physical beauty and this year the nation is sending a contestant.

The pageant has rightfully focused male eyes on milady and knowing men are recognizing that women, as well as being things of beauty, can perform important tasks in the field of science and industry.

Atom Liner Sought

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper item:

ATOM LINER SOUGHT

TOKYO, July 18.—Japan's big OSK (Osaka Shosen Kaisha) steamship line hopes to have a streamlined, atom-powered liner on its South American run by 1961—if it gets enriched uranium from the United States. OSK said the ship could cruise at 25 knots and carry 1,700 emigrants to South America three times a year.

The Thoughtless Whims of a Few Eisenhower Appointees Threaten To Ruin and Bankrupt Hundreds of Small-Business Men

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 19, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, I have been trying to discover what the exodus from Washington to its surrounding suburbs will mean to the Nation's Capital in terms of lost purchasing power and taxes.

I have introduced a measure, House Joint Resolution 690, to preserve the economic basis of the Nation's Capital by establishing a basic policy and an orderly procedure for the location of new Federal buildings in the metropolitan area of the District of Columbia. The text of this resolution is included at the conclusion of my remarks.

I am concerned with the consequences of this thoughtless, unplanned exodus to thousands of human beings—to small-home owners forced to put their homes on the block and relocate their families—to hundreds of small-business men faced with bankruptcy due to the loss of customers—to thousands of white-collar workers who, unwilling or financially unable to relocate at the whim of agency heads appointed by the President, would be forced to give up jobs and would, perhaps, become a drain on the local economy—and to churches, whose parishioners would have to reestablish their religious ties in other communities.

You would expect that, with much of the fate and future of our Nation's Capital hanging in the balance, relocation of Federal agencies would be subject to a logical procedure of careful investigation and factfinding, stressing the interests of Government as a whole and the cumulative effect of such moves on the Capital city.

You would expect that, before an agency head were permitted to move his department and his thousands of employees, he would have to present irrefutable planning, engineering, and economic facts to justify his decision.

You would also expect that some democratic system of checks and balances would exist in the relocation procedure, to prevent the possible circumvention by agency heads, either deliberately or unintentionally, of any of the required steps for obtaining officials approval of his decision to relocate.

Fantastic as it may seem, none of this is true today. As the previously quoted editorials indicate, Federal agency relocation is currently being decided largely on the basis of two factors—politics and personal whim—with defense usually quoted as the ostensible reason.

Now we all agree that civil defense should have overriding consideration. But the plain fact is that in these days of the H-bomb and guided missile, much of our defense thinking is as out of date as the model T. Bear in mind that the possible immediate fallout from an H-bomb covers more than 200 miles, and that varying amounts of demolition are caused up to a radius of 20 miles. I ask you gentlemen, how much protection can be afforded an agency by moving it across the Potomac and within a few miles of the city? It seems to me that our whole defense policy needs clarification, and perhaps revision, in the light of new developments in atomic weapons.

When, for defense or other reasons, an agency head decides he would like to move his department out of the Capital, certain types of clearances are theoretically required. In securing approval to relocate, agency officials are supposed to contact the following authorities:

Bureau of the Budget and Congress, on requested appropriations; General Services Administration, on planning of buildings and, occasionally, of the site; National Capital Planning Commission—and, if the proposed move involves the metropolitan area, National Capital Regional Planning Council—on planning aspects of the proposed relocation; and Office of Defense Mobilization, on civil defense phases.

PRESENT CLEARANCES INEFFECTIVE

But the sad fact is that these required clearances are often ineffective. Many agency officials are apparently unaware that they even exist. Frequently, agencies desiring to relocate omit steps in the pattern or do not follow them in logical order.

The city's two planning agencies—National Capital Planning Commission and National Capital Regional Planning Council—lack enforcement authority. Therefore, they are all too frequently regarded as merely a rubber-stamp routine.

siderable degree in Europe, women have

There is a serious deficiency in the manner in which Federal agency relocations are being processed—

Writes Max Wehrly, chairman of the National Capital Regional Planning Council.

Steps requiring coordination through, and reports of the planning agencies are being circumvented until administrative commitments have been made, thus presenting them with what is in fact a "fait accompli."

Furthermore, the entire pattern for relocation has never been pinned down and defined in any one law.

The result of the present haphazard method of relocating Federal agencies is, to a large extent, to leave the final decision for moving up to each individual agency head. And the inevitable consequence of this, is that Federal dispersal has become a political football.

EXAMPLE OF CIA

I regard the Central Intelligence Agency's campaign to build its new headquarters at Langley, Va., and relocate all personnel there, as one outstanding example of the inadequacy and political aspects of present dispersal methods.

This move is being proposed against the advice of a large number of official planners, and of qualified, disinterested planning and economic consultants outside the planning agencies. It is occurring over what the New York Times terms "the vehement protests of—Langley—area property owners." From any logical viewpoint, involving the city's welfare and considerations of reasonable cost, CIA's move appears totally unjustifiable. Yet it has been allowed to progress to the final appropriations stage.

I do not have time here to outline the step-by-step development of this relocation project. But I would like to mention several facts in passing.

From the very start, the project was opposed by leading planners and consultants on the grounds of inadequacy of facilities at Langley, and the "disastrous" effect the relocation move might have on land use plans and community relationships.

In a study of possible CIA sites made by the two planning agencies at the request of CIA officials, more than 40 sites were included—but the planners did not even rank Langley in the first 20 possibilities.

At least two District sites were considered far superior to Langley by the planning agencies, but apparently neither ever received serious consideration by CIA officials.

One major consideration in CIA Director Allen Dulles' decision to relocate, according to some reports, has been his desire to provide his employees with a "Princeton type" campus atmosphere.

However, the most interesting fact of all concerns the manner in which final approval for the Langley site was obtained from the National Capital Planning Commission, chief planning agency for the District. The Commission's membership is made up of 12 persons—5 appointed by the White House, and 7 serving ex officio due to legislative or governmental positions.

In December of last year, Commission members disapproved the Langley site by a vote of 6 to 5. Soon after, two governmental employees serving on the Commission were replaced by two other individuals. One of those replaced was Fred S. Poorman, Deputy Public Buildings Administrator, who had abstained from voting. The other was Leon Zach, representing the Chief of Engineers. Mr. Zach had voted against Langley.

By a strange coincidence, immediately after these men were replaced, CIA requested a reconsideration of its proposal to relocate at Langley. At the next meeting of the Planning Commission, when the reconsideration took place, the two new men supported the site. Those were the only two votes that changed. The Commission was put on record as approving the site, by a vote of 7 to 5.

You can find these facts documented in the printed record of hearings held June 1 before the House Appropriations Committee's Subcommittee on Department of Defense Appropriations, in connection with CIA's request for additional appropriations.

Mr. Speaker, I believe you will agree that the entire manner in which CIA's relocation request has been handled, points up the urgent need for an airtight procedure free of politics and personal whims.

Fortunately, responsibile leaders in Washington are already alerted to this need. The alarm was sounded months ago by the Federal City Council, when it spearheaded a factfinding drive to develop better relocation procedure. In June the District Bankers Association added its support to this campaign by adopting a resolution expressing "deep concern" over present relocation methods, and pledging "unstinting cooperation until a logical and orderely procedure for Federal agency relocation is finally secured."

Both of the city's planning agencies have launched studies with a view to coming up with specific recommendations for improved relocation procedure.

RESPONSIBILITY OF CONGRESS

However, we cannot shirk the fact that prime responsibility for study and adoption of a better procedure rests with Congress. In Washington, as the editors of U. S. News & World Report have observed:

All fingers point to Congress. All the big decisions on affairs of the District of Columbia have to be made by District committees of the Senate and House, followed by action on the floor—just like any national law.

It was in recognition of our responsibilities in connection with Federal agency dispersal that I introduced House Joint Resolution 690 on July 17. This joint resolution sets forth Congress intent to preserve the District of Columbia as the seat of government as provided in article I of the Constitution. It calls for establishment of a basic policy for location of new Federal buildings as one means of implementing this intent.

Under the resolution, no funds appropriated before or after the date of its enactment shall be obligated or spent for construction of any building space for any agency of the Federal Government at any location outside the District of Columbia, but within 20 miles of the zero milestone, without express approval of Congress with respect to the proposed site for such construction.

By immediately adopting this resolution Congress can establish a policy and formally recognize its own decisive authority on relocation. I hope this will be done before the current session ends.

NEED FOR STUDY

However, I believe this resolution should be followed by a full-fledged study of present relocation methods, with a view to presenting specific recommendations to the next session of Congress. These proposals would outline further improvements which should be made in methods of relocating Federal agencies.

This study should take due cognizance of the new plan developed by General Services Administration for location of public buildings within the District and its environs. In accordance with GSA's proposed program, the National Capital Planning Commission is currently working to establish a floor for Federal employment in Washington—a minimum level below which population should not be depleted by Federal relocation.

The study which I am now proposing would go beyond these efforts with specific recommendations designed to:

First. Establish a standard operating procedure on relocation with adequate authority to see it is followed.

Second. Guarantee that planning agencies have sufficient time to study civic and economic effects of each proposed move.

Third. Insure that all agency officials are fully informed on relocation procedure.

Fourth. Give widest possible publicity to issues and problems involved in each agency relocation.

I hope this study will be launched before the current session ends. Until it is, the all-important matter of relocation of Federal agencies—to which the very future of our Nation's Capital is tied so closely—will continue to be decided on a basis of politics and personal whim, rather than on sound engineering and economic principles, as these relate to preservation of the Capital City.

In conclusion I would like to read the text of my House Joint Resolution 690:

Joint resolution to preserve the economic basis of the Nation's Capital by establishing a basic policy and an orderly procedure for the location of new Federal buildings in the metropolitan area of the District of Columbia

Whereas Congress finds that there is a growing tendency on the part of Federal agencies to seek new locations in the vicinity of the District of Columbia, considering only the desires of the particular agency and without regard to the interests of the Government as a whole or the cumulative effect which such moves will have on the District of Columbia; and

Whereas it is the intention of the Congress to preserve the District of Columbia as the seat of Government as provided in article I of the Constitution: Now, therefore, be it

Resolved, etc., That it is declared to be the policy of the Congress that the development of the National Capital region shall be based upon the general concept that the District of Columbia shall be the seat of Government and that agencies which can be accommodated in the District of Columbia should be located there.

SEC. 2. All those responsible for the planning or construction of building space to accommodate agencies of the Federal Government within the greater metropolitan area of Washington shall be guided by the policy stated in the first section of this joint resolution.

SEC. 3. No funds appropriated before or after the date of enactment of this joint resolution shall be obligated or spent for the construction of any building space for any agency of the Federal Government at any location outside the District of Columbia, but within 20 miles of the zero milestone, without the express approval of the Congress with respect to the proposed site for such construction.

Address Delivered by Francis E. Walter, Representative in Congress, 15th District, Pennsylvania, at the 38th Annual Convention of the American Legion, Department of Pennsylvania, Convention Hall, Philadelphia, Pa., on July 20, 1956

EXTENSION OF REMARKS
OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 20, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

ADDRESS DELIVERED BY FRANCES E. WALTER, REPRESENTATIVE IN CONGRESS, 15TH DISTRICT, PENNSYLVANIA, AT THE 38TH ANNUAL CONVENTION OF THE AMERICAN LEGION, DEPARTMENT OF PENNSYLVANIA, CONVENTION HALL, PHILADELPHIA, ON JULY 20, 1956

I would like to take the opportunity offered by this great occasion to talk to you about a matter of great importance, which is now before the Congress.

Even at this very late hour when everybody in Washington seems to be eager to see the Congress adjourn and go home in order to do some work on mending of political fences, I sincerely hope that the legislation I wish to discuss with you today will be enacted into law before we go to Chicago and to San Francisco, as the case may be, to nominate presidential candidates.

The thing I have in mind is a bill which I have introduced in order to restore good sense to the laws governing the United States Government's power to dismiss civilian employees when their employment is deemed to be detrimental to the interests of the national security of this Nation.

The purpose of my bill is to protect the United States Government from foreign infiltration by Communist agents through the hole opened by the Supreme Court of the United States. Also, it would serve to remind the Supreme Court of the United States of the place it occupies in the Government of this Nation and of the impropriety to develop a strange forgetfulness of the wording of articles I, II, and III of the Constitution of the United States.

Realizing the clear and present danger which the international Communist conspiracy and its methods of penetration present to the United States, the Congress enacted, in 1950, a law designed to protect the United States Government from infiltration of disloyal employees. The President has implemented that law in an Executive order and as you well know, the so-called security and loyalty program as it affected employees of the United States Government has, since its inception, been under a constant and sharp attack by the Communists, their allies, and their dupes.

One rather enterprising employee of the Department of Health, Education, and Welfare by the name of Kendrick M. Cole has agreed to become the tool of those who want to wreck this program, and after having been dismissed from Federal employment because of his questionable activities and associations he has taken his case to the courts.

He was turned down by a Federal district court and by a Federal court of appeals. He went to the Supreme Court of the United States and there he won a victory which represents one of the most stunning defeats for the United States Government.

A divided Supreme Court of the United States, with 6 Justices in the majority and 3 dissenting—Justices Clark, Reed, and Minton—has invaded the powers of the Congress and of the President of the United States and has mutilated the law of 1950 and the President's Executive Order No. 10450 of 1953. This unconstitutional action of the judiciary branch took the form of a decision (*Cole* v. *Young*), which, in effect, amends the law by adding to it just four words. Four words which, in limiting the scope of the law, open the entire United States Government to the infiltration of our mortal enemies.

In plain words, the law—the act of August 26, 1950—is applicable to "any civilian officer, or employee" of the United States. What it meant was simply that every civilian officer and employee who has the privilege of being employed by the United States Government must be without a peradventure of doubt loyal to the United States and not associated with any subversive organization.

To the words "any civilian officer, or employee" the Supreme Court has added four words, "in a sensitive position," thus providing that out of the 2,300,000 civilians who hold Government jobs, only one-fifth must be loyal Americans and the remaining four-fifths could keep their Federal jobs although their loyalty to the United States is questionable and although they may remain under Communist discipline.

Obviously, such preposterous thought never occurred to the Congress and it never occurred to the President of the United States that such was the intent of Congress in enacting the 1950 law.

The legislative history of that law is exceptionally clear, as legislative histories go. Reports filed by committee of the Senate and of the House of Representatives, and the debate held on the floors of both Houses of Congress, prove without a scintilla of doubt that the law was meant to apply to every executive agency, not only to the "sensitive" ones—and to every Federal employee, not only to those who hold "sensitive" positions.

No Member of the House and no Member of the Senate contradicted when those statements were made. In fact, no contradiction could have been voiced for there probably is no one in the Congress who believes that there is in the entire Federal Government one job which could be offered to a person whose loyalty to the United States is doubtful.

As Justice Clark—with whom Justices Reed and Minton joined—stated in his dissenting opinion, "the janitor may prove to be in as important a spot security-wise as the top employee in the building".

But let's not stop at janitors—look at the Tennessee Valley Authority. TVA supplies power for the most important of our atomic plants. An electrician in a TVA power plant is not classified as a "sensitive" employee. He certainly could not be so classified under the Supreme Court's ruling, and yet look at the extent of damage to our security that he could do. Think of the staggering blow that could be dealt to our atomic work if that electrician would simply throw a switch to cut off the power at a moment chosen by those under whose discipline he remains.

As a matter of fact, think of what a charwoman could find in an office that she is hired to clean after everybody else had left. And think about the nonsensitive file clerk who moves freely around offices where highly classified documents are stored.

The Supreme Court of the United States said in *Cole* v. *Young*, leaning over backward in order to misread and misinterpret congressional and presidential intent that all that was intended is to protect from subversive infiltration only those activities of the Government that are directly concerned with the protection of the Nation, and not those which contribute to the strength of the Nation "only through their impact on the general welfare." It clearly follows that the Supreme Court of the United States would not mind at all if agencies or parts of them, such as the services protecting the Nation's health and welfare, the education of our youth, agencies in charge of interstate and foreign commerce, mailing rooms, archives, certain communication rooms, etc., would become "honeycombed with subversives," if I may quote once more Justice Clark.

If we permit the decision of the Supreme Court of the United States to stand, we would simply open what Mr. Churchill so aptly called our "soft underbelly" to agents of the Communist conspiracy, who from that soft spot, skillfully worming their way upward, could easily reach the very nerve center of the Nation. In addition to that, if we do nothing about this decision, we would condone the Supreme Court's attempt to invade that area of Government which, under the Constitution, is reserved to the Congress and the President.

The 3 dissenting Justices were quite outspoken in that regard, actually accusing their 6 colleagues responsible for the Cole decision of raising a question as to the constitutional power of the President to authorize dismissal of executive employees whose further employment he believes to be inconsistent with national security.

In reading the Supreme Court's decision in the Cole case, I cannot help but feel that I was right several months ago when in reading another of our Supreme Court's decision, I felt that the illustrious Justices dwell in ivory towers with windows shut tight and shutters drawn, carefully looking away from the mortal danger facing our freedom—the freedom which our laws are designed to protect and not to help destroy.

There is something uncanny in the stubbornness of some of our courts, including the Supreme Bench, with which they refuse to appraise properly the true meaning of the new skin that the Soviet leopard has now clothed itself. They refuse to see the same old spots on the leopard's skin, thus aiding and abetting the Soviet's effort to confuse and disarm the free world by stressing their peaceful intentions while intensifying their attempt to conquer through infiltration rather than through an open attack. It could be that the Supreme Court is not fraid of the danger of Soviet infiltration through actions of the Communist conspiracy because some of our Justices have shortsightedly accepted the opinion of the Fund for the Republic, the opinion which maintains that the Communist Party is nothing else but a political party of the United States just as is the Democratic Party or the Republican Party. That opinion was clearly and unequivocally stated in the report of the Fund for the Republic, dated May 31, 1955, a report for which Mr. Robert M. Hutchins, the fund's president, must accept responsibility.

In spite of congressional findings made in two legislative enactments, the Internal Security Act of 1950 and the Communist Control Act of 1954, where on the basis of irrefutable proof it was found that "the Communist Party of the United States, although purportedly a political party, is in fact an instrumentality of a conspiracy to overthrow the Government of the United States"—Mr. Hutchins and his research specialists arrived at the opposite conclusion.

What the Congress found is, of course, of little interest to the Fund for the Republic and I wish therefore to invite their attention to a most recent pronouncement coming from a source to which they might want to give more credence. I have in mind a major pronouncement printed in the official organ of the Communist Party of the Soviet Union, Pravda, just a few days ago, on July 16, 1956.

On that day, Pravda sounded a warning to the free world in general and to the United States in particular. Said Pravda:

"One should remember that among people who are insufficiently mature politically and excessively credulous, there may be some who would fall for the contention that international connections of Communist par-

ties became superfluous. The consolidation of international connections is a historical necessity both for the working class parties of the lands of socialism and for the Marxist parties of all capitalist countries."

If you strip that Marxist "gobbledegook" of its dialectical embellishments and if you translate it into plain english, it simply means that Communist parties of both the captive and the free nations remain but a foreign branch or an arm of the Soviet Union. Accordingly, to treat persons disloyal to the United States because of their adherence to the international communist conspiracy simply as persons who disagree with us on certain political issues, just as anyone of you, or I, myself, would disagree with a Republican or with a Democrat, is simply a case of suicidal folly.

Mr. Hutchins, of course, and some of the occupants of our Supreme Bench do not agree with that. However, in judging whether or not Communists and their sympathizers are agents of the Soviet Union and of the international Communist conspiracy, I prefer to accept Pravda's expert word rather than that of Mr. Hutchins. I feel today as if I should be making an award to you because after all it is you who are leading the fight to win the cold war in which it is my privilege to make some contribution. The things that are being done today by the committee of which I happen to be chairman are merely those things which have been of interest to our great organization for so long a time. I say with all the sincerity at my command it is you who should be receiving the award today because you have been steadfast in this cold war and I am sure that by your remaining steadfast we are going to win it, despite the opposition we find from many places today.

Wanted: A Reception Committee When Red China Is Admitted to the United Nations

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 16, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, my attention has been called to an article that appeared in the Evening Star some weeks ago which I believe is pertinent to the proposed admission of Red China to the United Nations.

Mr. Speaker, the writer suggests that a reception committee be organized of the families, relatives, and friends of our 33,000 killed and 103,000 wounded in Korea. This would, indeed, be a proper reception for the occasion. At this point, I am inserting the letter referred to:

REJECTS RED CHINA

After an evening of radio news one is convinced that the good old American proletariat is being air-conditioned as to our recognition of Communist China and Red China admission into the United Nations. If and when these are accomplished, I suggest:

Instead of a smiling striped pants brigade at the airport, why not a reception committee of the families, relatives, and friends of our 33,000 killed and 103,500 wounded in Korea? If not enthusiastic gathering, it would at least be numerically impressive.

The American Legion, Catholic War Veterans, Veterans of Foreign Wars and other patriotic organizations could form a guard of honor and escort the delegation to the United Nations temple.

Then one of our outstanding liberal statesmen could deliver an address of welcome and present the Chinese Communist Ambassador to the United Nations with the usual gold key.

This time a key to the back door. For it is through the back that they will be admitted.

Watch it, Americans.

P. TURNER.

The Story of Plymouth Meeting

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of July 20, 1956:

THE STORY OF PLYMOUTH MEETING

Some years ago there was a play called Guest in the House which showed how one girl, quietly but insidiously, managed to wreck a whole happy household. The heartings of the House Un-American Activities Committee have shown us what one defiant woman—plus $5,000 from the Fund for the Republic—can do to an entire community.

The woman is Mrs. Mary Knowles, hired as librarian for the James Memorial Library despite the fact that she had been linked with Communist organizations by Herbert Philbrick, undercover agent for the FBI, and had taken the fifth amendment when asked about those Red connections.

The community is our neighbor, Plymouth Meeting, which for years was a quiet, easy-going place where there was little dissention and even less personal bitterness and public ill feeling.

The House committee's hearings have shown us how Plymouth Meeting was split over the hiring of Mrs. Knowles, and how the Fund for the Republic intensified the bitterness and dissention by awarding the Plymouth Quaker Meeting $5,000 for what it termed resisting "outside pressure" for dismissal of the librarian.

The House committee hearing also brought out the following truths, to replace former misunderstandings:

First, the Plymouth meeting has been pictured as unanimous in backing up Mrs. Knowles. It is not. Witnesses testified that 61 of the 108 members signed a petition for her removal, and that only 28 of the 108 are known to have approver her hiring.

Second, the so-called outside pressure, far from being a minority protest, resulted in resignation of a library board member after 27 years' service; withdrawal of contributions to the library by Plymouth and Whitemarsh townships; termination of support by the school board and the Community Chest, and resignation of a number of members of the meeting.

Now we come to the action of the Fund for the Republic in injecting itself into what previously had been a community issue. The fund sent a "researcher" to Plymouth meeting. The researcher, with one exception, talked only to persons who favored the hiring of the librarian. She did not inquire into Mrs. Knowles' Communist background. She did not go into the Communist question at all even though it was the heart of the matter.

Following such one-sided research, the Fund for the Republic awarded Plymouth meeting the $5,000. Instead of easing a tense situation, that made it worse. The money was not accepted and is still in escrow. But the effect of the award, as one witness put it, has been "to divide families and friends" and to "stigmatize" Plymouth meeting.

What does all this show us? It reminds us, for one thing, that a fundamental Communist tactic is to divide free world peoples and set them fighting each other. It reveals also that the Fund for the Republic, in its research and in the statement of Mrs. Eleanor B. Stevenson, chairman of the $5,000 award committee, is not concerned with the Communist conspiracy, does not aid in fighting it, and seems quite indifferent to the fact that the results of such actions as this award play into the Communists' hands.

Finally, these hearings show us that at the bottom of this sorry controversy lies not an issue of civil liberties—but rather an issue of whether disloyalty is to be tolerated, condoned, and rewarded, and whether resistance to communism is to be relaxed and weakened within our Nation.

The story of Plymouth meeting is no story of a Midas touch. It is the tale of a Moscow tactic.

Federal Aid to States for School Construction

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. BETTS. Mr. Speaker, I should like to express briefly my views with respect to the recent consideration of legislation which would provide Federal assistance to the States for school construction. I voted against this measure because of my conviction that our public schools should always be financed and controlled by the smallest governmental body capable of satisfactory performance. My record of 10 years' service in the Ohio Legislature clearly evidences my interest and concern for our schools, and my voting record there will indicate my support of a sound and forward-looking school program.

No evidence was brought before this House that the States have adjusted tax and debt limits or adjusted property valuations so as to provide adequately for their own needs. I am proud, though, of our record in Ohio, which shows that in the 1951–55 period 97.5 percent of all proposed school levies were approved by the voters.

By the provisions written into this bill, Ohio would pay in each year nearly $7 million more than received back in grants. To my way of thinking, it was unfortunate that the so-called Gwinn amendment was not adopted. Under this amendment 1 percent of all Federal revenue collected within a State would be paid to the treasurer of the State for school purposes. Unlike the other two proposals, the funds of the Gwinn amendment would be free of any Federal bureaucratic control.

In the entire area of Federal encroachment into the affairs of the people and

local government, certainly education should stand out as a bulwark in the defense of a free people protecting themselves from an omnipotent Federal Government. It is high time for more do-it-yourself on the home front. It will save time, money, and personnel, while preserving human pride and dignity.

A Friend Grows Stronger

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, July 20, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, entitled "A Friend Grows Stronger," which appeared in The Concord Daily Monitor, Concord, N. H., on July 18, 1956, and which I feel will be of interest not only to Members of the Senate, but to the general public as well.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FRIEND GROWS STRONGER

The Philippines, which celebrated the 10th anniversary of its independence July 4, has just ratified the 1951 San Francisco Peace Treaty With Japan and has also approved an $800 million reparations agreement with Japan. And on the anniversary date Vice President NIXON announced the United States would yield title to its bases in the Philippines, though they continue to be operated by us on long-term leases and will be expanded to meet military requirements.

These agreements with Japan and the United States eliminate principal sources of international irritations in Manila and so contribute to better feelings among the free nations. Incidentally, they will mean modifications of the trade pattern for these three and other nations.

With Japan paying some $800 million in cash, services, and goods as reparations for the damage she did in the Philippines during World War II the trade arrangements with this Pacific neighbor will change in the direction of a much greater exchange of goods. This will to some extent change the character of purchases by Filipinos from the United States, though this country will remain a principal outlet for Philippine sugar, hemp, and coconut products.

Years of free trade with the United States, inaugurated when the Philippines became a part of this country, and continued after independence by mutual agreement, had channeled Philippine trade so greatly in our direction as to tie the economy of the islands very tightly to that of the United States. Prior to the war the Philippines in almost every year had a balance of trade in this exchange of goods, but since the war the balance has been in the other direction and the Philippines has had to resort to exchange controls and quantitative quotas to maintain the value of its currency, which it has managed to do relatively well for a young and comparatively small nation.

The demand for our goods resulted from a combination of the free-trade agreement, the great need for reconstruction of war-damaged capital resources, and the liking of American products cultivated during the nearly half century the Philippines was a part of the United States. The free-trade period ended December 31, 1955, when both United States and Philippines tariff preferences began a progressive decline, until normal tariff relationship will prevail 18 years hence.

With independence there goes responsibility, and the Filipinos are exhibiting a faculty for adjusting to such responsibilities, as the several steps taken in the past year, and particularly this month, indicate. With these steps there also goes a true sense of political equality as between nations, even though one be large and another small.

The Filipinos have had no patience with Communist enticements. But even before China became communistic the Filipinos maintained strong barriers against immigration, especially from the Asian mainland. They felt that if such barriers were not maintained the excessive continental populations would overflow their islands, and they would soon become people without a country through the sheer force of numbers. The Filipinos are only about 22 million, and their homeland is one of the few Asiatic areas of considerable natural resources which is not overpopulated.

There are some 30,000 Americans in the Philippines, and Americans have investments in the islands which total in excess of $350 million. Though our trade pattern with the Philippines will inevitably change, our nationals and this country will still have a large part in the economic development of this nation across the Pacific.

It was a strange quirk of international circumstances which took us into these islands at the turn of the century, when they were still so far away and so alien, but time has proven it was probably a most fortunate occurrence for both our peoples.

Uprising in Poznan, Poland

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. DODD. Mr. Speaker, the uprising in Poznan, Poland, has electrified the free world.

Thus far, the Government of the United States has failed to take full advantage of this great opportunity presented by the Polish patriots.

We have offered to supply free food, but we have done no more.

When the uprising in East Germany took place June 17, 1953, we also offered food and did no more.

Obviously, we have failed to develop a dynamic program which will meet these situations as they arise.

We appear to stand paralyzed today in the face of Communist aggression as we have stood for several years.

I have today sent a telegram to the Secretary of State in which I ask him to take stronger steps to help the Poznan people.

In my telegram, I suggest that the United States demand the release of the names of those who will be tried for participation in the revolt, and I have also suggested that the United States demand that Western observers be present at any trials which may be held.

These are definite and concrete things that we can offer to do.

An alert administration should think of many more opportunities which this situation presents to the cause of freedom in the world.

My telegram to Secretary of State Dulles reads as follows:

HON. JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.:

I respectfully urge that our Ambassador to the United Nations bring to the attention of the United Nations Security Council the uprising in Poznan, Poland. I particularly urge that our Ambassador impress upon the representatives of Communist Poland in the United Nations that the United States and the free world will watch with great interest the way in which the brave men and women of Poznan are treated by the Communist Government of Poland. I specifically urge that the United Nations institute an investigation of continued Communist oppression in Poland. I respectfully call to your attention a recent statement by General Bor concerning the Poznan revolt. General Bor suggests that we should demand the release of the names of those who will be tried for participation in the revolt, and he also suggests that we demand that Western observers be present at any trials that may be held. I respectfully urge that you accept both of these recommendations made by General Bor.

THOMAS J. DODD,
Member of Congress.

Mr. Sam and Mr. Joe

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. SPRINGER. Mr. Speaker, we all know that Syracuse University recently honored our distinguished Speaker, Mr. RAYBURN, and our beloved minority leader, Mr. MARTIN, by conferring upon them the degree of doctor of laws.

On the occasion of a luncheon on June 4, 1956, at Syracuse University, R. Smith composed a poem entitled "Mr. SAM and Mr. JOE."

In these words the author certainly expresses so well the feeling of this House toward these two distinguished gentlemen who have cooperated over the years in so many ways in behalf of our great country. I am sure all the Members will take great delight in reading this poem.

My good friend, William P. Trolley, the chancellor of Syracuse University, sent it to me and I received it only today in the mail.

The poem follows:

MR. SAM AND MR. JOE
(By R. Smith)

Mr. SAM and Mr. JOE.
They come as two, as one they go
The weal of each the other's woe—
Mr. JOE and Mr. SAM

Mr. SAM and Mr. JOE
In public butt like any ram
But privately each is a lamb—
Mr. JOE and Mr. SAM.

One for the money, two for the show
Three to make ready, and four to go:
Whistle each triumph but whistle it low:
Honorable SAM and Honorable JOE.

How yields this miracle of strife: that two times two is five?
It yields when great men greatly strive,
When compromise is kept alive—
'Tis then that justice thrives.

To Dr. JOE and Dr. SAM our glasses now we raise:
To each and both let us invoke unnumbered happy days—
That party strife may justice raise,
And sportsmanship grace all our ways!

The Radford Proposals

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, July 20, 1956

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Walter Lippmann, published in the Washington Post on July 19, entitled "The Radford Proposals." I believe it is the most discerning exposition concerning those proposals that I have read.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
THE RADFORD PROPOSALS

There are going on inside the Government two big arguments about military policy. The one has been brought into the open through the Symington subcommittee, prompted, it seems plain enough, by high but not the very highest officers of the Air Force. This argument is about whether the money asked for by the administration is enough to keep us ahead of the Soviet Union in the ultimate nuclear weapons. Out of this argument has come the action of Congress in voting $900 million more for the Air Force than the President asked for.

The second argument, which was brought into the open in dispatches by Mr. Anthony Leviero, turn on proposals by Admiral Radford to reduce the Armed Forces by about 800,000 men during the coming 3 years. This would mean a smaller Army but one armed with more deadly modern weapons. The Radford doctrine would give up the idea of being prepared to fight large local wars, like the Korean, with conventional, that is to say without nuclear, weapons.

There is a connection between the two arguments. It is that the cost of maintaining both kinds of military power would be prohibitive. It is not possible as the cost of weapons rises to keep up two military establishments—one for a world war and one for local wars, one with the big nuclear armaments and the other a powerful but conventional Army, Navy, and Air Force. It would mean that both military establishments would be second rate. Insofar as the Radford proposals face up to the dilemma, they will have a sympathetic hearing.

For the general public the most serious question is raised by those who make the following argument. Now that the U. S. S. R. and the United States of America have reached a stalemate in nuclear weapons, neither will dare to use them. This will mean that military aggression with conventional weapons—like that of the North Koreans—can be undertaken without fear of nuclear penalties. It is necessary, therefore, to be ready to resist conventional aggression with a conventional Army, Navy, and Air Force.

Without saying that it is theoretically impossible, it seems to me most unlikely that a war as big as the Korean war, which concerned the U. S. S. R. and the United States of America, could ever be fought again without the use of nuclear weapons. The chances would be very great that small atomic bombs would be followed by bigger bombs and these by still bigger ones. The chances of general war would be so great that a local war on the Korean scale would be an incalculable military risk. It is not absolutely certain but it is very probable that for the visible future wars of this type will be absorbed into the overall nuclear stalemate. This calculation should not prove to be an imprudent risk.

The assumption which lies at the root of the argument is that the alternative to general nuclear war is local conventional war. I wonder. It seems to me that the real alternative is first guerrilla warfare and second, political infiltration and maneuver. Against neither of these kinds of warfare are the conventional American military forces prepared to be effective.

What fighting there is in the world today is in Algeria and in Cyprus and in Palestine. Such guerrilla warfare can be an effective kind of warfare in a sense that it wins concessions. But it is not the kind of warfare for which American military power, nuclear or conventional, is prepared or even designed.

It follows, I believe, that if ever our vital interests are involved in an outbreak of local violence and disorder, for example in the Middle East, we shall not again do what we did in Korea. We shall not engage ourselves in a big land war on the other side of the world. We shall remember that we are a sea and an air power, and we shall tailor the shape of our intervention to the character of our military forces.

We are vulnerable in Germany, in Japan, in Vietnam, in Korea and in Formosa, not to military aggression but to political infiltration and maneuver. Red China is working to make a deal with the Chinese in Formosa, and who can be at all confident that they will not succeed, if not now behind Chiang's back then later on when Chiang goes? The same kind of thing is underway behind Dr. Syngman Rhee's back in South Korea and behind Diem's in South Vietnam. In Germany negotiations with the East are not very far off and once Dr. Adenauer retires, they are certain to take place.

The critics of the Radford thesis, who want to maintain conventional forces big enough to fight another Korean war, may fairly be asked at what place, where our interests are at stake, a war of the Korean type might break out. This is a fair question because a military establishment has to be designed for a war with a particular adversary. It cannot be designed for any kind of war anywhere with anybody. Our strategic Air Force is designed for a particular war. But is not the plea of those who believe that we must also have big conventional forces prepared for another Korean war a case of preparing for a war that is past?

Investigation of Foreign Capital

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. DODD. Mr. Speaker, on March 23, 1955, I introduced a resolution which called for a full and complete investigation of the growing practice in the United States of raiding established business enterprises, especially those engaged in national-defense work.

Under the resolution which I introduced, an investigation would have been instituted to determine the identity of the persons engaging in raiding practices and the sources of the money used by them and the effect of these activities on the defense production capacity of the United States and on the national economy.

Mr. Speaker, on that day in March of 1955 when I addressed this House, I urged that this resolution be adopted and I tried to point out the great danger which I thought confronted us at that time.

It is of great interest, therefore, that in today's issue of the New York Herald Tribune there appears a front-page article written by Mr. Don Whitehead, which tells of an investigation now under way by an appropriate committee of the Senate which is seeking to "unravel the mystery of what happened to untold billions of dollars of foreign capital which entered the United States during the last few years and then disappeared."

Mr. Speaker, I am pleased that the other body has taken up this important question, and my only regret is that this House did not adopt my resolution which was introduced more than 16 months ago, for I believe, Mr. Speaker, that a thorough investigation of this situation is long overdue.

Very recently Mr. Victor Riesel also published an article dealing with this same subject matter.

As a matter of interest to my colleagues, I attach the article by Mr. Don Whitehead and the article by Mr. Victor Riesel:

[From the New York Herald Tribune of July 20, 1956]

UNITED STATES FLOOD OF FOREIGN CAPITAL ON—SENATE GROUP PROBES MYSTERY

(By Don Whitehead)

WASHINGTON, July 19.—Senate investigations are seeking today to unravel the mystery of what happened to untold billions of dollars of foreign capital which entered the United States during the last few years and then disappeared.

Preliminary inquiries have developed the strong suspicion that the untraced funds have been used to an increasing degree to buy "hidden" control of some American companies and to gain at least a voice in the management of others which have important national defense contracts.

BEGAN IN 1951

A Senate Internal Security subcommittee headed by Senator OLIN JOHNSTON, Democrat, of South Carolina, has a staff of investigators, tax experts and economists checking into this now-you-see-it-and-now-you-don't financial shell game.

The investigation has gone far enough, Senate sources say, to make it clear that an unusual flight of foreign capital into the United States began in 1951 and has been increasing in volume. Most of it has been coming through Switzerland and Canada but no one can say who owns the money or controls the investments it has bought.

"This money may be entirely legitimate money," one source said, "and it may be that it is being used legally. But we can't say where this money is today except in a few cases and we don't know the owners."

Investigators do know that in 1950 about $1 billion was transferred out of France and

Italy into Uruguay. The Uruguayan economy, these sources say, was unable to absorb any such amount. As a result, it was transferred into Mexico, and then into the United States.

ACTIVITIES HIDDEN

In each movement of the money, they said, the owners' identities were hidden by numbered bank accounts—and the transfers were by number only.

There is concern not only in the Senate but in other agencies of the Government and in some parts of the business world over the amount of capital within the United States whose ownership is hidden.

The Senate subcommittee already has pointed out the potential danger of a Communist infiltration into the United States financial world, using Russia's vast gold reserves to buy into companies having defense contracts.

NO EVIDENCE YET

As yet, the Senate investigators are reported to have found no evidence that such a penetration has begun.

The subcommittee's aim as outlined by a committee source is this:

1. To discover where the foreign-controlled money has been invested and who the true owners are.

2. To close any tax loopholes by which the foreign owners are paying a disproportionate share of the income taxes.

The Senate group's inquiries indicate that in some cases American citizens have been employed as directors in companies without being aware that the companies actually are controlled by foreign interests operating through a brokerage, bank, or fictitious name.

ENTITLED TO KNOW

A source close to the investigation said: "Perhaps the owners of this foreign capital have nothing to hide. But it seems to us that the American taxpayer and stockholder is entitled to know who these people are and who are the true owners of the stocks that have been bought."

Next Tuesday the Senate subcommittee will hear testimony from Defense Department witnesses. They will be questioned about their knowledge of "hidden" ownership of companies which have vital defense contracts.

REDS PLOT FINANCIAL GRIP ON UNITED STATES FIRMS

(By Victor Riesel)

NEW YORK.—Two American financial wizards linked by the Senate with Communist spy rings, have infiltrated Wall Street and today are working for big investment firms.

It is believed that their assignment is to spot vital production firms and direct Soviet efforts to buy them up and tie them into the Russians' espionage and sabotage network in the United States.

Government officials in and out of the cloak-and-dagger business believe such plants have been purchased through camouflaged investors—using some of the $13,800,000,000 which has poured into the United States from abroad.

About $2 billion of these funds are from Swiss banks which are impenetrable. These banks don't have to show their records to anyone—not anyone, anywhere.

PROBE BY SENATE

A special two-man subcommittee of the Senate Internal Security Committee believes that some of these funds have been used to give Soviet agents entry into several strategic companies which have been taken over under circumstances which are not readily understood. So, they're investigating.

What must be understood is that any key knowledge of what American industry is producing is as vital in espionage as knowledge of even the most secret defense plant production know-how. Give an even half-brained intelligence headquarters such industrial knowledge and it will know where we are deploying our forces, where we are putting our heaviest concentration, where we are prepared to meet assault, where our bottlenecks are, and what unions to infiltrate so that slowdowns and sabotage can be ordered to hurt us.

Dr. Arthur Bloomfield, senior economist of the New York Federal Reserve Bank, pointed out that it was technically possible for hidden investors abroad to buy up our factories, but said he had no personal knowledge of any such coups.

WALL STREET SOVIETEERS

But there are Senators who have. Neither they, nor I, will name the two Sovieteers who work high on Wall Street today. I can't even give their initials here.

One has been linked by Government investigators to the notorious Victor Perlo spy ring.

The other, according to congressional records, set up the structure of Communist penetration of the Government by men identified as Communist underground agents.

But these two Red Wall Streeters are just a couple out of scores of others who are penetrating United States industry through a series of special survey, inventory, and industrial economic agencies which gather more vital statistics about the United States in 1 year than we get Soviet promises of good behavior in Moscow.

And for all this the Soviets can spend freely. It costs nothing but gold. And they've lots of that counterrevoluntionary stuff.

State of President Eisenhower's Health

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. LESINSKI. Mr. Speaker, serious questions are being raised about the techniques being used to sell the American public the idea that the present incumbent of the White House is well and quite capable of carrying on the duties of the Presidency. The Republican promotion campaign may be convincing some, but not all are being fooled. Even some of the newspapers that have stanchly supported Mr. Eisenhower in the past are beginning to show evidence of doubt. As an example of this, I should like to quote the following article from the July 17, 1956, issue of the Boston Post:

NO GREAT SURPRISE

There was never very much doubt after President Eisenhower survived the ileitis operation that he would be a candidate for a second term, for all the considerable weight of the White House promotional planning apparatus was thrown into the task of preparing the country for the announcement.

* * * * *

The purpose of this, of course, is to have the announcement come from one of the GOP right wing stalwarts and thus help heal the breach between the right wing and the liberal wing of the GOP.

But, the almost hysterical assurances of great surprise at the announcement are strictly synthetic, for it is no great surprise. It was expected all along.

First, there were the assurances from doctors, surgeons, and medical pundits that the operation was a great success and the President was healthier than ever. Then the daily bulletins on the improvement of the President's general health, which, through constant reiteration, created an atmosphere of extreme confidence in the President's strength and endurance.

This is in no way an unprecedented technique. Something of the same approach to a health problem was utilized in the fourth-term campaign of President Roosevelt when he was paraded through the rain in New York and Brooklyn. Indeed, the fact that Roosevelt was increasingly confined to a wheelchair was consciously deemphasized during the last years of the Roosevelt administration.

It is important to point out, however, that the promotional technique is being used, and that the President's health is a real factor and a grave problem for the American people to consider. It cannot be brushed off on the basis of a promotional selling device.

The unvarnished fact is that President Eisenhower has survived a coronary attack, which curtailed his activity, and an ileitis operation, which further curtailed his activity, and that he is now convalescent. His fitness to run for a second term is something only he can judge. He seems to feel that he is capable and fit.

His fitness to serve for a second term is something that the American people have got to determine at the polls in November. And they are entitled to all the facts, which, to a degree, they have had. But the American people are also entitled to know that the manner in which all the facts have been presented is circumscribed by a promotional planning technique, which leaves considerable information in fine print, like the ingredients of a food package under food and drug law requirements.

The announcement from Gettysburg was no surprise. It would have been more surprising if he declined. His health is still a factor. And the state of any candidate's health, Democrat or Republican, is an important consideration.

What Is the Eisenhower Administration Trying To Do to the Seat-of-Government Concept Decreed by Article I of the Constitution?

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, among all the subjects confronting Congress in the closing days of the present session, few are as important to our Nation as the problem I am about to outline. With concern over it mounting in the national press, in local government, and among citizens everywhere, it deserves immediate legislative attention and action.

I refer to the unplanned, uncoordinated, and thoroughly political manner in which Federal agencies are presently being permitted to move out of Washington. Because Government is the No. 1 industry of our Capital City, the net

effect of this trend, if allowed to continue, could be to turn Washington into a ghost city.

Washington has been aptly characterized in a recent magazine article as "the pride of every good American and in reality the capital of the free world." It is your city and mine. To most of us in this Congress, its stately buildings and leafy avenues symbolize a second home.

To millions of tourists its gleaming monuments are reminders of our Nation's glorious past. To visitors from other parts of the world, Washington stands as a constant symbol of liberty and freedom—and of hope that these priceless attributes may someday be attained by the enslaved millions of the world.

Yet today, the security of this, the world's most important Capital City, is threatened by an indiscriminate flight of Federal agencies to the suburbs. Although this threat is less dramatic than that posed by the H-bomb and intercontinental ballistic missile, it can, if allowed to continue, have the same effect over the long term.

You can find the problem outlined in headlines of the day: "City of Washington in Trouble," U. S. News & World Report, July 6, 1956; "United States Agencies Join Rush to Suburbs," New York Times, July 15, 1956; "Undermining the Capital," Washington Star, June 12, 1956; "Agencies Scored for Leaving District of Columbia," Washington Post and Times Herald.

I shall quote briefly from some of these news stories and editorials. On July 15, a New York Times story bearing a Washington dateline announced:

> The largest Federal construction program in years is underway with proposed and approved projects involving more than $400 million in the Washington area alone. And, like many citizens of this town, more of the Federal agencies are turning to the suburbs for their new homes. * * *
>
> All this, agency officials will explain, is because it is Government policy to disperse for defense reasons, there are few suitable sites left in Washington, and the modern buildings they want to build would run into trouble with the Fine Arts Commission.
>
> But there is suspicion among some Members of Congress that agency officials, who generally have had free rein in selecting their sites, simply want "hunt country" to work in with plenty of free parking space and plenty of lawn.
>
> The trend is causing some concern. Homeowners in the countryside are complaining. Businessmen in the city are protesting that the trend could be disastrous to Washington's economy.

A similar concern was voiced by the Washington Star in its lead editorial on June 12:

> The public generally (has) cause to be concerned over what seems to be happening to the original concept of Washington as the Nation's seat of Government. That time-honored concept is seriously threatened by a movement in some Government circles toward abandoning the District as a site of Federal activities in favor of decentralized locations in the suburbs and beyond.
>
> Equally disturbing is the apparent lack of a national policy governing so-called relocation. Heads of agencies have been given free rein, as a rule, in choosing sites for their new homes. It is all very haphazard, with planning agencies often assigned to subordinate roles.

And in its lead editorial for June 14, the Washington Post and Times Herald scored the "current confused relocation policy" which bases final decision for moving Federal agencies out of Washington on "the whims and preferences of individual agency heads."

REASONS FOR CONCERN

There is ample reason for this growing concern. The city of Washington, with its thousands of white-collar workers, small-home owners and small-business men, depends upon governmental activities for its very existence. Federal Government in this area accounts for nearly half of all employment. It also sustains a host of small businesses which exist to service Federal workers.

Directly or indirectly, Government accounts for the bulk of Washington's retail sales, rental payments and other basic activities. We already see a spiraling budget and falling revenues in the city—both largely caused by a population movement to the suburbs. We see Congress forced to refuse desperate requests from the District Commissioners for increased funds. Take away the operations of the Federal Government and Congresss share of maintaining our capital city would increase to truly astronomical proportions.

These budget requests point up the disturbing fact that Washington is already in trouble. As the U. S. News & World Report put it in the magazine's lead article on July 6:

> The visitor, captivated by the Capitol's lovely panorama and awed by the power that emanates from its portals, does not see the layers of troubles—governmental, social, financial—that are piling up to overburden the Nation's first city.

Yet these difficulties exist. In large part they are similar to the socioeconomic headaches suffered by other major cities. They include the familiar flight to the suburbs on the part of city families, the dwindling tax base, the traffic congestion, the rapidly mounting financial burdens and so on.

Today, gentlemen, I could take you only four blocks from where we sit in this Chamber and show you some of the worst slums in the Nation—houses without running water, and whose residents are forced to use outdoor toilets.

All of these problems are magnified by Washington's lack of any vote or true government of its own. They would be far worse were it not for the bolstering effect upon the local economy exerted by operations of the Federal Government.

It is against this background that a growing number of agency heads are deciding to relocate their departments outside the District. At least six major agencies are presently hoping to move. They include:

The Central Intelligence Agency, which plans to build a $56 million building near Langley, Va.

The Atomic Energy Commission, which has started work on its new $10 million headquarters near Germantown, Md.

The National Bureau of Standards, which is planning a $40 million home near Gaithersburg, Md.

The Weather Bureau and the Coast and Geodetic Survey, which are planning a joint $31 million building near Gaithersburg, Md.

The Geological Survey, which would like to construct another building, costing $23 million somewhere on the Potomac River in Maryland.

Still other agency officials are considering the possibilities of relocation. For example, there has reportedly been serious talk within the Navy Department about moving to the Midwest.

How this will affect the Nation's Capital in loss of population is summarized in the New York Times article from which I quoted previously:

> One estimate is that if all the proposals for the Federal agency exodus were adopted, some 50,000 residents of Washington would move out. Washington over recent years has lost a number of Federal employees to outlying areas, what with the Pentagon in Virginia and the National Institutes of Health and the Census Bureau in Maryland.

Now, on the basis of the best estimates available, it takes at least one person to service each governmental employee in Washington. Add to this the fact that, according to Census officials, the average Federal worker represents a family of three. This means that, for each Federal employee affected by relocation, at least four other individuals would be indirectly affected. And if 50,000 employees moved out of Washington, as the New York Times estimates they would, 200,000 people—or nearly one-third of the total population—would feel the consequences.

The President of the American Baptist Convention

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1956

Mr. NEUBERGER. Mr. President, Dr. Harry L. Dillin, the distinguished president of Linfield College, in McMinnville, Oreg., was recently honored by his election in Seattle as president of the American Baptist Convention.

Dr. Dillin, the second westerner to be honored by the American Baptist Convention as its president in 50 years came west to Oregon 25 years ago, and was named president of Linfield College in 1943 when he was 36, the youngest college president in the United States.

Linfield College, under the dynamic leadership of Dr. Dillin, has grown rapidly in size and prestige. Dr. Dillin has been noted for his civic work as well as his role as a college president, and has also served for two years as president of the Oregon Baptist Convention.

Also honored at the recent Seattle convention was Earl White, a Portland attorney and member of the First Baptist Church, who was named a commissioner of the American Baptist Convention.

Mr. President, Dr. Dillin is the second Oregonian within a year to be named head of his church. Dr. Paul S. Wright, pastor of the First Presbyterian Church of Portland, was elected moderator of the General Assembly of the Presbyterian Church, U. S. A.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent biographical sketch of Dr. Harry L. Dillin by William Hilliard, religious editor, from the Oregonian of July 15, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW BAPTIST LEADER GAINS RENOWN IN BUSINESS, EDUCATION

(By William Hillard)

A little man eminently capable of doing a big job—that's Dr. Harry Leslie Dillin, dynamic president of Linfield College and new head of the American Baptist convention.

The 48-year-old college preident was elected president of the large Baptist body 3 weeks ago at the convention's annual session in Seattle. He will be president for 1 year.

Dr. Dillin, an active Baptist since childhood, is only the second westerner to gain the presidency in the 50-year history of the convention.

Oddly enough, the only other westerner was elected at the only other meeting in the Pacific Northwest. Corwin Shank was named head of the convention in 1924 in Seattle.

Dr. Dillin, who stands 5 feet 7½ inches tall is one of the youngest men to be named president of the convention and only the second college president to head the group.

Born in the east, he came West 25 years ago to teach math and economics at Linfield for 1 year and to "see the cowboys and Indians." After a summer vacation in the East, he wired the college to see if his job was still open, found it was and has been at Linfield since.

Dr. Dillin was graduated from Columbia University, New York, cum laude in 1928. He followed this with graduate work at the University of North Carolina, where he had been accepted for a teaching fellowship. He also has done individual research work at the Universities of London and Michigan.

He received an honorary doctor of law degree from University of Redlands, Redlands, Calif., in 1944 in recognition of his outstanding and meritorious service in the field of Christian education.

His rise to the presidency of Linfield was comparatively swift. He was appointed professor of economics in 1936 and 2 years later he was made controller of the college. In 1941 he was made controller-business manager.

SUCCESS COMES EARLY

When named president of the school in 1943, Dr. Dillin as only 36 and was declared by the trustees who elected him to be the youngest college president in the United States. At the time he was named president he was professor of mathematics and economics, business manager-controller and investment analyst.

In addition to his teaching duties he was tennis and golf coach. His court teams won more than 100 collegiate matches and for a number of years he held the course record for 9 holes at Riverwood golf course, disrupting part with a sizzling 31—5 strokes under par. Dr. Dilling recalls his coaching days as "the great joys of my years."

Still athletically inclined but unable to find the time for golf and slowed down too much for tennis, Dr. Dillin has taken up water skiing and spends his spare time at the family's cottage at Devil's Lake practicing his new-found sport love.

COLLEGE GROWS RAPIDLY

Under Dr. Dillin's leadership, Linfield College has grown tremendously. He has taken part in the building or renovation of all but one of Linfield's 19 buildings. Two dormitories are under construction and will be ready for occupancy this fall. The school supervises all of its construction work, including awarding of contracts and buying of all materials.

When the American Baptist Convention elected Dr. Dillin, it reached out for a man well trained in leadership. He is a member of numerous organizations and has inevitably assumed the leadership of almost every one of them.

He is a member of Phi Beta Kappa, Pi Gamma Mu and an associate member of Sigma Psi.

In McMinnville he is a member of the chamber of commerce and a past president of the Rotary club. He was district No. 154 governor of Rotary International in 1953. He is a deacon of First Baptist Church in McMinnville and has served on the board of trustees.

COLLEGE POSTS HELD

In addition, Dr. Dillin has served as president of the Association of Independent Colleges of Oregon and chairman of the Foundation of Oregon Colleges and the Pacific Northwest Athletic Conference. He also serves on two commissions of the American Association of Colleges and is chairman of the board of directors of the newly created Linfield Research Institute.

Working with the American Baptist Convention will be nothing new to him. He served as president of the Oregon Baptist Convention for 2 years and was elected last year to a term on the general council of the American Baptist Convention.

First hint of any move to nominate him for president was heard by Dr. Dillin in 1955 at the convention's meeting in Atlantic City. Dr. Dillin addressed the convention on education. Following his speech, he was approached by some delegates who thought he should consider the president's post. Dr. Dillin didn't take them seriously then.

This year is a year of reorganization in the convention and Dr. Dillin thinks this move was instrumental in his promotion for the presidency.

EDUCATION TO BE STRESSED

"I think the people who promoted me were looking for men with a background in business and organization," Dillin surmised. "And, too, I believe the convention wanted to highlight education as a means of stimulating interest among church people to strengthen colleges."

Dr. Dillin said the American Baptist convention is constructed loosely of a central organization "very disorganized." Much emphasis is given individual interpretation of the scriptures and local autonomy, he said.

Under Dr. Dillin, the convention will seek to unify. At the Seattle meeting the first step in this direction was taken when the general council was upped from 36 to 42 members and the council was augmented with the creation of a coordinating staff, equally divided with laymen and clergymen.

In line with the reorganization program, it will be Dr. Dillin's duty to name nine people as commissioners to reevaluate and to study the work of reorganization in the convention and to report to the national body at the 1957 meeting in Philadelphia. The commissioners will make their final report at the annual meeting in 1958 and at that time recommend further steps to be taken in the reorganization program.

One of the commissioners will be Earl White, a Portland attorney and member of First Baptist church (White temple).

The "go go go" president of Linfield—or "fireball" as he is sometimes called by his students—has a full year ahead of him as president of the convention.

As chief officer, he will preside at all meetings of the convention and of the general council and will exercise general supervision over the affairs of the convention, a body representing a membership of 1,500,000 in approximately 6,500 churches in 34 States and the District of Columbia.

He takes off Sunday for meetings in Chicago and Greenlake, Wis., on the first round of activity that will keep him constantly on the go for a year.

At home will remain his wife, Irene, and two children, Harry Leslie, Jr., 14., and Kathleen, 12. A third child, John, 20, is a sophomore at Trinity University in San Antonio, Tex.

Dr. Dillin is the second Oregon man within a year to be named head of his denomination. In 1955 Dr. Paul S. Wright, pastor of First Presbyterian church, was elected moderator of the general assembly of the Presbyterian Church, U. S. A.

Lawrence F. Whittemore

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, July 20, 1956

Mr. COTTON. Mr. President, one of the outstanding citizens of New Hampshire whose fame and influence extends far beyond the limits of our State is Lawrence F. Whittemore.

Mr. Whittemore is a former president of the New York, New Haven, & Hartford Railroad; former president of the Federal Reserve Bank of Boston; and former president, and now chairman of the board, of the Brown Co., at Berlin, N. H. The directorates upon which he serves and his business connections are far too many to enumerate here. He has long been a leader in the civic, educational, and political life of our State and of New England.

An interesting and inspiring bit of biography appears under the caption "Turning Points," in Dun's Review for July 1956. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TURNING POINTS

What makes a man successful? The question has always defied glib answers and is most profitably explored on an individual basis. In most men's experience major decisions translated into action have proved to be at least turning points. Mr. Warren Vierow has asked several major business leaders to relate the personal decisions that did the most to place them on the path toward success.

Here is one of the answers:

L. F. Whittemore: "After returning from World War I in 1919, I found an opportunity to work for the New Hampshire State Tax Commission as an accountant. In 1922 the chairman of that commission put me in charge of an estate carrying on an active lumber business doing about a million dollars a year. I was at that time 28 years old and, while I had worked in the woods,

I was without experience as a lumber manufacturer. I ran that estate for 3 years, successfully, I think, but when the estate was settled, the family of the deceased took over. I decided to leave them although we were close friends and have remained so ever since.

"The Supreme Court of New Hampshire appointed me tax commissioner of the State before I was 31 years old. At the end of 5 years I decided that this endeavor did not offer enough of a career, since in the meantime I had started a lumber business of my own with a partner.

"At first we rode high on the wings of success, in a small way but significant to youngsters. Our main outlet happened to be a company which manufactured chairs through prison labor. Congress suddenly passed an act forbidding shipment of prison-made goods in interstate commerce. All contracts were canceled at a very embarrassing time for us. I learned what 'force majeure' meant in that way. The losses were relatively heavy, and the growing Whittemore family went on a strict budget for a number of years. At least one-third of my gross earnings were applied to eradicating bank loans. Probably that experience coming in 1929 and 1930 did more to influence my business career than any other. The habit of budgeting expenditures became ingrained in our family and we have all lived on that basis since. It has been productive of savings and of thought habits which led to a sense of well-being I had not previously thought important.

"The determination to pay off my obligations rather than seek the ease and comfort of bankruptcy helped establish my reputation to the extent that I was asked to be a director of one of the banks to which I was indebted."

Statement of Andrew J. Biemiller, Legislative Representative, American Federation of Labor and Congress of Industrial Organizations Before the Senate Judiciary Committee on Civil Rights Legislation, May 25, 1956

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. ROOSEVELT. Mr. Speaker, as promised in the debate of the Committee of the Whole, I include the following statement for the information of interested Members:

STATEMENT OF ANDREW J. BIEMILLER, LEGISLATIVE REPRESENTATIVE, AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS BEFORE THE SENATE JUDICIARY COMMITTEE ON CIVIL RIGHTS LEGISLATION, MAY 25, 1956

Mr. Chairman, my name is Andrew J. Biemiller. I am a legislative representative for the American Federation of Labor and Congress of Industrial Organizations. My office is located at 815 16th Street NW., Washington, D. C. I appear here today on behalf of that organization. We appreciate this opportunity to testify on this important subject of civil-rights legislation.

The resolution on civil rights adopted at the first constitutional convention of the AFL–CIO last December states:

"The AFL and the CIO have always believed in the principle and practice of equal rights for all, regardless of race, color, creed or national origin. Each federation has separately played a distinguished role in the continuing struggle to realize for all Americans the democratic rights promised to all by the Constitution of the United States.

"The AFL–CIO is similarly pledged and dedicated to promote and defend the civil rights of all Americans. Its constitution declares that one of its objects and principles is—

"'To encourage all workers without regard to race, creed, color or national origin to share in the full benefits of union organization.'

"Another such object and principal of the new federation is:

"'To protect and strengthen our democratic institutions, to secure full recognition and enjoyment of the rights and liberties to which we are justly entitled, and to preserve and perpetuate the cherished traditions of our democracy.'

"Our constitution likewise provides for a committee on civil rights which: 'shall be vested with the duty and responsibility to assist the executive council to bring about at the earliest possible date the effective implementation of the principle stated in this constitution of nondiscrimination in accordance with the provisions of this constitution.'

"Thus the AFL–CIO stands dedicated no less than its predecessors to bring about the full and equal rights for all Americans in every field of life."

The resolution further states:

"The AFL–CIO wholeheartedly supports the decisions of the Supreme Court outlawing segregation in the public schools. We urge all of our affiliated State and local bodies to work with other liberal forces in their communities to facilitate a peaceful and effective transition to an unsegregated American educational system. We urge the administration to utilize the full powers of the Federal Government to frustrate and punish unlawful attempts to block implementation of the Supreme Court's decision.

"We urge the Congress to enact legislation making lynching a Federal crime, and to invalidate State laws requiring the payment of a poll tax as a prerequisite to voting."

That is the general position taken by our organization on this subject of civil rights legislation.

Today I should like to state a little more fully our position with respect to the various specific proposals which are pending before this committee.

First, let us look at the civil rights proposals which have emanated from the administration through the person of Attorney General Brownell.

We are pleased that this administration has seen fit after a little over 3 years in office to turn its attention to this vital subject of civil rights legislation. We are sure that it is only coincidence that this subject is raised in an election year. Unfortunately, however, the administration proposals are not only belated but rather inadequate. Let us look at each of them.

The administration proposes first that there be established a Commission on Civil Rights.

It would be the duty of this Commission:

1. To investigate allegations that certain citizens of the United States are being deprived of the right to vote or are being subjected to unwarranted economic pressures by reason of their color or race;

2. To study developments constituting a denial of the equal protection of the law; and

3. To appraise the laws and policies of the Federal Government with resepct to equal protection of the laws under the Constitution.

While the proposal carefully avoids mentioning the school segregation issue I take it it is not really unrelated to that subject.

We are in favor of an investigation and study of this whole subject of civil rights. We would be happy to see such a study undertaken by appropriate committees of the Congress. If Congress does not care to undertake such a study, we agree with the administration that a public commission should be established.

We feel that such a commission could not accomplish its purpose unless it were composed of eminent and public spirited citizens and is adequately financed and adequately staffed. The bare appointment of a public commission to study a subject accomplishes nothing. A year ago the Congress established a public commission on the subject of internal security. As yet nothing has been forthcoming from that commission except one form letter. A public commission can be used as effectively to thwart action on a subject as to stimulate it.

Point two in the administration civil-rights program is the establishment in the Department of Justice of an additional Assistant Attorney General. Though the bill does not say so, the administration states that this Assistant Attorney General would be in charge of a Civil Rights Division.

While we are in favor of this proposal, it does not strike us as "earth-shaking." It seems more concerned with form than with substance.

We do not think it particularly important what title is given the lawyer in the Department of Justice who is in charge of enforcement of the civil rights laws. We do think it important that an adequate number of attorneys be assigned to this work and that they have the full cooperation of all branches of the Department of Justice both in Washington and throughout the United States.

When Mr. Brownell became Attorney General, the civil-rights section of the Department of Justice consisted of an attorney in charge and eight other attorneys. At the present time it consists of the attorney in charge and seven other attorneys. According to our arithmetic this adds up or subtracts down to a loss of 1 civil-rights attorney in 3 years. If Mr. Brownell is concerned with getting the job done on civil rights by his Department we do not know of anything that now prevents his assigning additional attorneys to this work.

Part 3 of the administration proposal, we are pleased to see, has somewhat more substance. This proposal would do two things. First, it would authorize the Attorney General to bring civil actions to prevent or redress certain acts or practices which violate existing civil rights acts. The existing civil rights laws authorize injured persons to bring civil suits and also authorize criminal prosecutions by the United States. As we understand it, the proposal the Department of Justice offers would not change the substantive provisions of the present law but would only provide for civil suit by the Attorney General.

We are strongly in favor of this proposal for three reasons:

1. The injured individuals are often not in a financial position to institute litigation to redress their own rights.

2. In criminal prosecutions instituted by the United States the trial must under the seventh amendment to the Constitution be before a jury drawn from the locality in which the crime was committed. Experience shows that in certain types of cases—not limited to those involving racial issues—the local juries simply will not convict regardless of the evidence.

3. The remedy of criminal prosecution is further undesirable because it tends to exacerbate the very community tensions which gave rise to the civil rights violation. From this standpoint a suit for an injunction before a Federal judge would be infinitely preferable.

The minority report of the House Judiciary Committee denounces this proposal as

"new", "novel", and "absolutely shocking". Actually, however, most Federal regulatory statutes are enforceable by civil suits for injunction instituted by the United States. There is likewise nothing novel about authorizing the United States to maintain civil suits on behalf of injured private individuals. Such suits are authorized, for example, by the Fair Labor Standards Act, and by the laws according reemployment rights to veterans.

The second branch of part 3 of the Government proposal makes it clear that these civil proceedings to prevent or redress violations of civil rights may be brought in the Federal courts, without regard to whether the injured party "shall have exhausted any administrative or other remedies that may be provided by [State] law."

We are strongly in favor of this provision. To show why we are, let me describe to you a situation which has recently arisen in Dublin, Ga.

The workers in a lumber mill there decided to form a union They asked the AFL–CIO to send an organizer, and we did. The city council, at the instance of local employers, thereupon passed an ordinance establishing an annual license fee for organizers of $2,500. The ordinance also provides that no person shall be granted a license who has not been a citizen of Dublin for 5 years, and that he must sign an oath that he is not a Communist and that "he does not believe in the overthrow of municipal and State laws in regard to segregation." Violation of the ordinance is criminally punishable.

This ordinance is of course unconstitutional: the Supreme Court has many times held such ordinances invalid, and has also held that they violate the civil rights laws. Probably even the ordinance's authors know that it is invalid.

When, however, we go into a Federal district court and seek to enjoin the enforcement of an ordinance like this we are always met with the contention that we must exhaust our remedies in the State courts. This means that our organizer must violate that ordinance, be arrested, go to jail, and take his chances on what will happen after that. These State court proceedings may take 2 or 3 years; and the momentum of the organizing campaign is of course lost during such a period.

It is not, I am advised, clear that this argument that we must exhaust State court remedies is well founded, but it is always advanced and we have had suits dismissed on the basis of it.

The fourth and last point of the administration proposal has to do with providing further protection for the right to vote. As we see it, the main effect of this proposal would be to authorize civil actions by the United States to redress or prevent unconstitutional deprivation of the right to vote. For the reasons we have just given, we are in favor of this proposal also.

In sum, therefore, we are in favor of the civil-rights proposals advanced by the administration. We think they are a step in the right direction. In our view the most important of these proposals are those authorizing civil actions by the United States, which are embodied in S. 903, introduced by Senator HUMPHREY. We strongly urge the enactment of that bill.

Senator HUMPHREY is also the author of S. 900, a Federal antilynching bill. The AFL–CIO convention resolution quoted above unequivocally commits our organization to the support of Federal antilynching legislation.

This is not a new subject. Our predecessor organizations and affiliated unions have testified on it many times over the years. I do not propose now to repeat that testimony. We simply urge that, to afford proper protection to our colored citizens and other minority groups, Congress now enact appropriate antilynching legislation.

We understand that this committee is also considering H. R. 5205, a bill to make it a Federal crime to kill a member of the Armed Forces "while engaged in the performance of his official duties, or on account of the performance of his official duties." This bill has already passed the House.

Section 1114 of the Criminal Code (title 18) now makes it a Federal crime to kill a Federal judge, United States attorney, employee of the FBI, members of the Coast Guard, etc., etc., while engaged in the performance of his official duties, or on account of the performance of his official duties. We see no reason why all members of the Armed Forces should not receive the same protection by Federal law.

In conclusion, I would like to make it clear that we do not view the measures which we have discussed as constituting a complete or adequate civil-rights program. We favor, for example, the enactment of a Federal antipoll-tax law, and a general revision and strengthening of the existing civil-rights laws. On this occasion, however, we have confined our statement to the particular measures which we understand to be pending before this committee.

Thank you.

America's Need for a Ready Reserve

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, I present herewith an able address delivered by a distinguished American. It is entitled "America's Need for a Ready Reserve" and was delivered by Carter L. Burgess, Assistant Secretary of Defense for Manpower, Personnel, and Reserve, before a civic group in the city of Shreveport, La. It was well received and has helped to fully explain our Reserve program in the southwest. It is as follows:

AMERICA'S NEED FOR A READY RESERVE

INTRODUCTION

I am greatly honored at being here in the hospitable city of Shreveport, on what has been a most auspicious and a most enjoyable day.

The beginning of work on your new Air Reserve installation, and the constructive interest shown in it by all levels of the community, indicates to me that presence of sound support for all that our Government is seeking to achieve in military defense. So does the high morale and spirit of the many Reserve and National Guard units which I have been privileged to visit. I am proud that I was able to take part in today's activities and to have the pleasure of meeting so many conscientious citizen soldiers.

CONGRESSMAN BROOKS

Being here this evening affords me the welcome opportunity to offer a few long overdue words of praise and appreciation for a man who has come to exemplify to me the very finest in America's system of representative government. I refer to your able and distinguished Congressman, the Honorable OVERTON BROOKS.

A man who served his country overseas in World War I, and who knows our defense requirements from long years spent in the highest councils of Government, he can rightly be called today the foremost congressional advocate of a sound military Reserve program, and one of the best friends the Reserves and the National Guard ever had. Without his support, his guidance, and his wise counsel—coupled with his willingness to fight for a just and necessary cause—I doubt if we would have the greatly improved Reserve program that is now in operation.

As chairman of the House Armed Services Subcommittee on Reserves, Congressman BROOKS led the legislative effort which resulted in passage of the Reserve Forces Act of 1955. As Congressman CARL VINSON, of Georgia, has so aptly put it, this law might better be called the Brooks Reserve Act since its final passage was largely the result of your Congressman's personal and determined efforts.

On this occasion, therefore, and before this fine audience of his friends and constituents, I wish to salute the Congressman from Shreveport, and to thank him for all he has done to advance the cause of a stronger and better defended America.

THE THREAT WE FACE

With the thought of our country's necessary defenses in mind, I have chosen as my subject here this evening "America's Need for a Ready Reserve." I should like to approach it by considering the nature of the military threat which faces the United States and the free world, and the conditions which this imposes upon us.

We are confronted by potential enemies of great strength. Despite much propaganda concerning forthcoming cuts in their manpower program, the Communist nations remain heavily armed at the present time, and are bending every effort to increase their strength through the perfection of advanced weapons systems.

Right now the Soviet Union has well over 4 million men in uniform, and Red China another 2.5 million. Each has great numbers of trained reserves, swiftly mobilizable, and swiftly deployable. Neither has agreed to any kind of international inspection system.

Actually, if the Soviet Union carries through what it has announced it intends to do, it will only be approaching what the United States has already done.

At the end of World War II, our forces were at a peak level of 12.3 million men. Soviet forces at that time were estimated at 11.5 million.

We then proceeded to reduce sharply to force levels of 3.3 million in 1946, 1.5 million in 1947 and in 1950—before the outbreak of hostilities in Korea—to a postwar low of 1.4 million men.

By 1950, the Soviet Union had reduced to 4.1 million men, or, in other words, had retained three times as high a force level as we had at that time. With Korea, the United States built back to a peak level of 3.6 million men, but today the figure stands at around 2.9 million—a sizable reduction. Added to this is the fact that we have offered to go down to a 2.5 million level with accompanying reductions in armament, provided the Communist bloc is willing to do the same on a verifiable basis.

This offer the Communist leadership has now said it is willing to accept—so far as numbers themselves are concerned. Nothing has been said, however, about the important question of inspection and verification.

What the latest Soviet maneuver will amount to in the long run remains to be seen. Obviously, however, it is plain that the United States and the free world will continue to be confronted by large masses of Communist manpower under arms, backed by well-trained reserves, and bolstered by an all-out program of technological development.

SOVIET WEAPONS DEVELOPMENT

This program of scientific weapons development in Russia is something I'd like to mention in a little greater detail.

Each day, the Soviet Union is adding to its total military power in jet bombers, long-range submarines, missiles, and nuclear weapons. Today the Soviet has an estimated 20,000 aircraft, including more than 1,000 bombers of which several hundred are medium jets, and some are long-range jet and turboprop heavy bombers.

Russia began testing and developing guided missiles shortly after World War II and has been engaged in an intensive missile program since then. Missiles of both short and medium ranges could have been developed by this time, and within a very few years they probably will be able to develop longer range ballistic missiles.

And, finally, it has been announced that last November the Soviet successfully dropped a hydrogen bomb from an aircraft, which indicates that a significant Soviet nuclear-weapons stockpile is being continuously increased.

Taken altogether, a steady, uninterrupted increase in military power rather than a reduction is the basic pattern of Soviet activity today. This power is being enlarged, moreover, by what appears to be a major effort to build up the Nation's standard of living through a broadened industrial and economic base. This effort, coupled with sizable encouragement to scientific research and develpment, could well be moving the Soviet Union forward to modernization at a far more rapid rate than was once thought possible.

When one reflects upon this trend, therefore, and relates it to the semimilitary nature of Russian society and the relative ease with which great reserves of men and equipment could be mobilized, the pattern of power development becomes quite clear.

This is what confronts the United States and its Allies.

AMERICA'S LONG-RANGE ANSWER

I have cited the overall Communist military potential to give emphasis to a particular fact. And that is the long-range and sustained nature of the threat which we face.

Confronted by such a threat, therefore, the United States and its Allies have no choice but to look to their security by providing an equally sustained, and an equally long-range defense—one that recognizes our need to be strong in every sense, militarily, industrially, and economically.

We have such a defense program today, and in cooperation with our Allies, we propose to maintain it. Taken in its entirety, it has proved to be a massive deterrent to war, and a firm foundation from which we can continue to work to advance the cause of freedom throughout the world.

This is a stable program. No longer are we following our one-time policy of dangerous peaks and valleys in our necessary defenses. No longer are we pursuing an up and down policy with respect to necessary spending. The American people are supporting a defense budget of around $35 billion, and the recognize this as an essential level. We are, as the President has many times emphasized, geared for the long pull.

Our program assures us a healthy and diversified economy. We are not maintaining unrealistically large forces which would exert a drastic burden on the American tax structure or lead to undesirable changes in our social order. We are, however, maintaining forces which our best military and civilian judgment believes to be entirely adequate.

This is admittedly a program requiring constant improvement, constant review and constant revision, but granting that, let me assure you that the men in the Kremlin understand full well that the United States is dealing today from a sure position of strength—backed by the resolute will of an entire nation.

We must continue to maintain military forces on active duty sufficient to deter aggression against us or our Allies. In the event we were attacked, however, despite all our efforts for peace, then we must be capable of striking back with tremendous, paralyzing force, enabling us to achieve successful mobilization and move ahead to ultimate victory.

We must be organized to employ the full capacity of our national resources. We must maintain our alliances with friendly nations, assuring them of our steadfastness, and integrating our strength with their own.

We must continue to advance and perfect our technological, economic, and inventive capacity, making certain that the man who wears the American military uniform has the finest weapons and equipment in the world. Here we need to bear in mind that today's needs will not be tomorrow's and that the swiftly changing situation calls for the very ultimate in wise planning and foresight.

With all these requirements in mind, I believe it is accurate to say that the American defense program measure up.

FOR FISCAL 1957

During the new fiscal year, our Armed Forces are going to continue to grow in striking power and effectiveness. The Strategice Air Command is replacing the B–36 with the intercontinental B–52. The carrier force of the Navy is increasing its combat power. Our continental defense system is growing in scope and effectiveness. Our air defense squadrons, already jet equipped, are receiving substantial numbers of supersonic aircraft.

On the ground, our forces will achieve even greater firepower. More and more Nike installations will replace standard antiaircraft. A major share of our 1957 procurement program in all the services will be for more advanced weapons.

Guided missiles alone will involve the expenditure of $2.5 billion in 1957, about $1 billion more than the total for the past fiscal year, and over 2½ times the amount spent on such weapons during fiscal 1955.

With regard to missiles and advanced weapons in general, the need is to see the problem in proper perspective. What needs to be understood is that in total deterrent power our Nation has not relinquished the leadership to its potential enemies, regardless of fluctuations in the scientific development field, nor will it.

It is true that today's complex weapons make it difficult to know exactly, from time to time, just where this or that country actually stands. A realistic attitude has to assume that occasionally we will surpass potential enemies in some ways, and occasionally they will surpass us in others.

The point to be kept constantly in mind, however, and one too frequently overlooked is just this: America is not falling behind in the technological race, and will continue to have a tremendous deterrent force in existence—ready to be used if necessary. And that, I submit is also a fact only too well known to the Kremlin.

THE ROLE OF RESERVES

Military Reserves enter this picture as a basic element permitting us a means to offset communism's depth of strength with a corresponding depth of strength of our own.

America, traditionally, has been a nation which relies upon Reserves. We have always recognized that we cannot maintain on an active footing all the forces a major conflict would require.

Today this is still our guiding principle. There is, however, one additional point which needs to be stressed, and that is the fact that today's Reserve must be a completely "Ready Reserve"—ready for action on an instant's notice. We are living in an age where delay could be fatal in a time of war.

In the past we worried little about such matters. We were scarcely susceptible to surprise attack, and consequently we assumed a "grace period" during which time we could mobilize in the event of hostilities against us.

These, however, are not the "good old days." Ocean and distance barriers no longer afford us protection. Today, with time and space conquered by technology, there would be no grace period, and there could be the reality of a sudden massive attack aimed at the heart of our Nation.

The lesson, therefore, is crystal clear—both our active forces and our essential Reserves must be in a continuous high state of readiness, organized and trained, and prepared to cope with any challenge.

THE RESERVE FORCES ACT

The Reserve Forces Act of 1955 provides us with a means of improving the readiness of our Reserve, and providing a stronger underpinning to our active forces.

Briefly, the new law provides for a scheduled build-up to move from a level of around 800,000 in actual paid training last August, to around 3 million by 1959. At the end of fiscal year 1957 this calls for a figure of 1.1 million, and with some 900,000 now in training we are moving ahead to meet this goal.

The law contains an impressive number of new and positive improvements:

For the first time young men are permitted to enlist directly into the Reserve. For the first time the President is given authority to call up to one million of the Ready Reserve in an emergency without prior congressional action. For the first time there is reasonable provision to insure compliance with the training requirements.

Other firsts include the fact that a number of distinct benefits are provided to business and industry, conserving critical civilian skills and giving employers an exact knowledge of which men would be called in event of an emergency.

Through careful screening, and a recall process administered by the Selective Service System, the Reserve Act affords a fair and equitable division of critical skills. Men with such skills will swiftly be screened out of Ready Reserve status, where military requirements permit, and assigned to the far less vulnerable Standby Reserve.

Another key provision making the Brooks Reserve Act uniquely valuable is that which allows certain skilled men in industry and key jobs who are over 18½ to take 6 months' training with the active forces, and then return to their jobs. These would then spend a reasonable time in their local Reserve in fulfillman of their total obligation. At the present time, the Army has received around 900 applications for this program with many more expected to come forward.

By 1958, we will begin to receive around 15,000 men a month from the active forces who will have a Reserve training obligation, under provisions of the Reserve Act. Right now, we need to be intent upon developing a steady volume of volunteer input, giving us necessary strength for today, and bolstering our entire program for tomorrow.

SIX MONTHS' TRAINING

In this connection we are placing a great emphasis upon still another productive aspect of the new Reserve law, and that is its provision for a special Reserve training program for young men under 18½. Because everybody can help us greatly in putting this constructive program across, I want to sum up its advantages for the young men at this time. Here is what it offers him: a 6 months' basic course at the Army, Coast Guard or Marine camp nearest home; a chance to finish high school; opportunity to plan his future; and better job prospects on the com-

munity level, for the employer has an exact knowledge of where he stands with respect to military obligation.

I wish to stress that this is a quota program, however, with an enlistment rate now well above 1,000 a week. The man who waits beyond age 18½ loses his chance to enlist and becomes ineligible for the program's many benefits. Right now, better than 30,000 young men have signed up for this program.

What happens to the youth who takes this special training? From the time he leaves, through 6 months of basic and some advanced courses, he receives the best instruction in the Armed Forces. He becomes skilled in a variety of military subjects, and rapidly acquires the know-how to defend himself and his country in an hour of emergency.

And let me say that a healthy majority of the boys who have gone into this program are glad they enlisted.

The Department of Defense believes the 6 months' training plan is a productive approach to the effective utilization of manpower. We further believe it is going to find its greatest supporters in the rank of these young volunteers who have already taken advantage of it and gone on with their education, career or other plans.

Taken altogether, it is a new and practical concept of military service that enables a young man to fulfill his military obligation by being a full-time citizen and a part-time soldier. It helps the individual be secure about his future, and it helps the Armed Forces guarantee the security of America.

SUMMARY

Here in Shreveport I am conscious of a living awareness of America's need for a Ready Reserve. You have strong public support for your National Guard and Reserve programs. You are aware of their value to you, of the protection which they afford your city and your homes.

Your distinguished Congressman BROOKS has taken the lead in the Nation's Capital in calling attention to our need for a properly trained and organized Reserve—one that is commensurate with the military realities of this day. Through his efforts he has done a great deal to make this Nation more Reserve conscious. He, and all like him, deserve thanks for helping build up our internal military strength, and in organizing our Nation for whatever dangers an indefinite future may hold.

The Congress as a whole has done a tremendous job this session and last in supporting the Armed Forces of the United States. It has recognized, realistically, that we can no longer afford extreme variations in the levels of our military strengths, and in the quality and training of our forces.

Consequently we have not only had approval for a plan to strengthen our Reserves, but we have had sound support in our overall efforts to make the military service more atractive as a career—thereby cutting down on turnover and training costs which run into billions of dollars.

The backing of our career incentive legislation, ranging from better housing to increased medical benefits for service families, has already had marked and positive effect in increased reenlistments and stabilization of forces.

The Reserve program itself, of course, will be what our citizens make it. Integrated with all our other defense efforts it can unquestionably provide a tremendous source of strength, and protection against invasion and disaster.

No amount of legislation, however, can substitute for the understanding of each citizen of why we need a Reserve, and of why he needs to do his full part in its support.

Our young men in particular need to come forward proudly and serve, and they need to be encouraged in this endeavor by their parents and their community. The Armed Forces today, in all their Active and Reserve programs, are able to offer better than 30 plans of enlisted and officer service. None of these choices, however, best fit the individual who is undecided or late, or who lacks the patriotic zeal to do his part for his country.

The responsibility for this Nation's defense is borne in one sense by the eexcutive and the representative branches of Government, delegating authority to the Department of Defense. Actually, it rests on each of us, as the citizens of a republic where the individual is the ultimate determinant of national policy and action. And it is upon the measure of our devotion, our willingness to serve and sacrifice, our acceptance of the burdens as well as the privileges of citizenship in this free land of ours, that the future of America so largely depends.

By knowing their obligations, making plans, and by performing military service at an early age, our youth can undertake responsible futures with predictability and certainty.

They can also, through a nationwide volunteer response, serve plain and lasting notice on the Communist leadership that our country is determined in its defense, and united in its outlook.

CONCLUSION

And now, you have been a most gracious audience, and I thank you again for the honor of being here tonight. I shall briefly conclude these remarks.

America's defense program, as the President and the Congress have many times emphasized, is not designed for aggression, but it is designed to deal with any aggressor. We intend to see that it remains strong, that it is flexible and resilient for the needs of today and tomorrow, and that it lacks nothing essential to carry us safely through the years which lie ahead.

In time, this program—coupled with our humane and consistent policies in support of the free aspirations of all people—may see the reactionary forces which confront us today melt away, ushering in a better and happier world for all mankind.

That, at any rate, is the hope with which free peoples everywhere must live. In the meantime, we must be self-reliant and clear-minded. We must overlook no honorable opportunity which would lead to an improvement in world relations but we must also overlook no detail, or aspect of our security precautions.

Our patern of strength for the future must continue to be strong Active Forces; strong Reserves, trained and ready; and a strong national economy, backed by the greatest industry on earth.

Working together—bearing in mind our obligations as citizens of the American Republic—we shall continue to assure our protection as we stand up for the cause of freedom.

Louisiana Honors Max Abelman

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 11, 1956

Mr. ANFUSO. Mr. Speaker, Mr. Max Abelman, who is sometimes described as "Brooklyn's ambassador of good will," is the recipient of many honors and citations from distinguished citizens of this country and abroad who have recognized his many and humanitarian deeds. He was recently honored by the Governor of Louisiana, the Honorable Earl K. Long, who appointed him a colonel on his staff.

Under leave to extend my remarks, I wish to insert into the RECORD the brief letter from Governor Long appointing Mr. Abelman to the colonelship. The letter reads as follows:

STATE OF LOUISIANA,
EXECUTIVE DEPARTMENT,
Baton Rouge, May 28, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR FRIEND: It was my pleasure to appoint you a colonel on my staff, and your commission has gone forward to you. I am further pleased to hand you herewith wallet size ident card of your colonelship on my staff.

We hope you will visit with us at the State capitol at some time in the future, and that you will let us hear from you from time to time, giving us your valued opinions and views on matters of State, or on matters of immediate importance to you. I wish to maintain our good will policy all through the years.

Sincerely yours,

EARL K. LONG,
Governor.

The Long Count in 1924

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. VANIK. Mr. Speaker, in a series of articles in the Cleveland Plain Dealer on previous conventions, Mr. Walker S. Buel, head of the Washington bureau of the Cleveland Plain Dealer, discusses the high points of the respective national conventions. In the Cleveland Plain Dealer of July 18, 1956, Mr. Buel writes about the long count in 1924 when 103 ballots were necessary at the Democratic convention in order to nominate a candidate.

Mr. Speaker, this analysis of previous national conventions should be required reading for delegates to the conventions of the Republican and Democratic Parties. The splendid article is entitled "The Long Count in 1924" and is as follows:

THE LONG COUNT IN 1924

(By Walker S. Buel)

WASHINGTON, July 17.—Whatever happens in the Democratic national convention next month in Chicago, it is doubtful whether it or any future political meeting ever will repeat the bitter fighting, the drama and the 103 ballots of the Democratic conclave which met June 24, 1924, at Madison Square Garden in New York.

For one thing, the Democrats still had the historic two-thirds rule, used by the Democratic South as a safety check on nominations opposed by southerners. The party abandoned this device at Philadelphia in 1936.

SKIPPED NAMING THE KLAN

The 1924 Democratic convention went to New York through the influence of the old New York World and other interests within the party which wanted to nominate the Governor of that State, Alfred E. Smith. Opposing Smith was William G. McAdoo, who had the backing of southern and western Democrats. The Ku Klux Klan was very much an issue at that time, and opposition to Smith on the grounds of his Catholic re-

ligion was attributed by his friends to the Klan.

The Klan sentiment was strong enough to stop an effort by anti-Klan delegates to write a plank in the platform denouncing the Klan by name. Perhaps the wildest pandemonium in political history broke loose when Smith was put in nomination by Franklin D. Roosevelt. Tammany door tenders threw wide the gates and Smith followers poured in, carrying fire department sirens and marching about the hall in loud clamor for 73 minutes.

It eventually became clear that neither McAdoo nor Smith could attain two-thirds. The 1920 nominee, James M. Cox, of Ohio, and other leaders went into behind-the-scenes conferences from which emerged the name of John W. Davis, New York lawyer, native of Clarksburg, W. Va. He was nominated on the 103d ballot.

While the Klan issue and prohibition (which Smith opposed) were the subject of the most blazing controversies, another was an attempt, led by Newton Baker, of Cleveland, to write renewed support of the League of Nations into the platform. This the more isolationist elements of the party were able to prevent, bringing about a long weasel-worded plank which said in part:

"There is no substitute for the League of Nations as an agency working for peace; therefore, we believe that, in the interest of permanent peace, and in the lifting of the great burdens of war from the backs of the people, and in order to establish a permanent foreign policy on the supreme questions, not subject to change with change of party administrations, it is desirable, wise, and necessary to lift this question out of party politics, and to that end to take the sense of the American people at a referendum election, advisory to the Government, to be held officially under act of Congress, free from all other questions and candidacies, after ample time for full consideration and discussion throughout the country, upon the question, in substance, as follows:

" 'Shall the United States become a member of the League of Nations upon such reservations or amendments to the covenant of the league as the President and the Senate of the United States may agree upon?'

"Immediately upon an affirmative vote we will carry out such mandate."

SKIRTED THE ISSUE OF PROHIBITION

The Republican plank was a forthright reiteration of the party's position of 1920 against joining the league. "On this we stand," it said.

Both major parties weaseled that year on prohibition. Both took refuge in similar unspecific language.

"The Democratic Party pledges itself to respect and enforce the Constitution and all laws," said the document written at New York.

Declaring law violations weaken and threaten Government itself, the GOP platform adopted at Cleveland said: "The Republican Party pledges the full strength of the Government for the maintenance of these principles by the enforcement of the Constitution and of all laws."

Pan American Airline

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PATTERSON. Mr. Speaker, it is a proven fact that New England needs another airline to service its expanding economy, vital defense plants, and travelers. The airline best qualified to provide this service is Pan American. As I have shown in previous remarks, Pan American can not only provide the quickest and most thorough service, but it can also provide the safest.

Pan American has a brilliant safety history. Its accident record is excellent. I would like to show the reasons for this fine performance.

In the first place, only the most modern planes are used. Pan American aircraft are equipped with all the latest safety devices which enable them to fly under any conditions anywhere in the world. Its equipment is the most comfortable and the safest available in passenger service today.

But fine equipment alone is not enough. Pan American takes many more precautions. To make triply sure, each plane and each piece of equipment is tested thoroughly at all altitudes, in all conditions, and at all times of the year before it carries one passenger or one piece of freight. And before each flight, highly trained mechanics and technicians give each plane a microscopic going-over. Every grease spot and scratch is serviced before the plane taxies on the runway. If there seems to be the slightest fault anywhere in the craft, it is replaced by one fresh off the production line or completely repaired until perfectly sound.

Further precautions are made because Pan American realizes that there is a human element which is very important in every flight. All Pan American personnel, from the pilot to the desk clerk, are thoroughly trained. They must undergo frequent rigid physical tests to determine their reactions to all conditions. Eyesight and reflexes must be perfect. Before flying a Pan American plane all personnel must have had long hours of experience in the air so that each piece of machinery is completely familiar, every airport recognizable, and every rattle can be fixed in a jiffy.

To provide still another check Pan American has a special training program to teach a pilot how to react to emergencies. He must undergo in practice, every type of possible accident so that he will know exactly what to do in case trouble develops on a real flight. He is trained to fly over and land on land and sea and is taught how to make his passengers feel totally comfortable and safe at all times. Hostesses are similarly trained to make each flight pleasant as well as free from danger, and all the latest conveniences are available for comfort.

As I have shown in previous remarks, this safe service is essential to New England's economic future. Latin America's raw materials and markets are vital to our growing defense industries. I have also shown how needed expanded service is to vacationers and tourists. I have not, however, mentioned the great diplomatic services which such a Pan American traffic would provide the Nation.

By linking the whole East Coast with Europe, Asia, and Latin America, Pan American would keep America much better informed on recent developments. Political, business, and industrial representatives from all nations could reach our shores much more quickly with the service Pan American would like to provide. Similarly, our representatives could be sent all over the world quickly, directly, and safely with such a service. Militarily, such a traffic could also be used as a basis for future troop movements and as a training medium for maintenance crews in the event of a world conflict. In this shadowy world of suspicion, where quick developments can have far-reaching consequences, the service Pan American offers would be a tremendous diplomatic and military advantage against the Communist bloc.

So in concluding, Mr. Speaker, I hope the Civil Aeronautics Board will pay the closest attention to Pan American's requests to provide the vital service which New England and the entire Nation needs so urgently. Such service is essential for economic, travel, diplomatic, and military reasons. Pan American can provide it in the safest and most thorough way.

Merry Memories

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. VANIK. Mr. Speaker, with national convention time approaching for Democrats as well as Republicans, our attention is more frequently being focused to the work of the convention, the development of national platforms and the crystallization of issues for the coming campaign.

Mr. Speaker, I invite the attention of my distinguished colleagues to an article by Mr. Walker S. Buel, head of the Washington bureau of the Cleveland Plain Dealer, and published in the Cleveland Plain Dealer on July 14, 1956, in which Mr. Buel points out that it was in 1920 that the Democrats used the slogan: "peace, progress, and prosperity." Mr. Buel's analysis of the 1920 convention is good background reading for the conventions scheduled later this year. The article is as follows:

MERRY MEMORIES

(By Walker S. Buel)

WASHINGTON, July 13.—Politics produces many strange things, and I am having both pleasure and profit in marshaling memories of national conventions I have covered, beginning in 1920.

For example, the 1956 Republican slogan, reiterated time and again by National Chairman Leonard W. Hall and in party literature, is "Peace, prosperity, and progress." Before me is the Democratic textbook for the campaign of 1920. On its front cover above a picture of presidential nominee James M. Cox, and on the back cover above a picture of Franklin D. Roosevelt, vice presidential nominee, are three large-type words, each marked with an exclamation point: "Peace, progress, prosperity."

PARTY'S SLOGAN NOT NEW

What was good for the Democrats then, although they did not win with it, is good today, 36 years later, for the Republicans, who hope it will attract a majority of the November votes.

The convention which nominated Cox, then Governor of Ohio, was the first ever held in San Francisco. The GOP meeting there next month will be that city's second—one for each party. To attend the Democratic convention of 1920, a special train carried 77 newspapermen from the Republican convention at Chicago, which nominated Warren G. Harding of Ohio, to the Golden Gate. That is a significant figure, in view of the fact that to date, 4,321 representatives of press, radio, TV, newsreels, still photographers and others have applied for credentials to cover the forthcoming Republican session beginning August 20.

On the way west from Chicago I traveled in the same car with a newspaperman whose name is treasured in the annals of Ohio journalism, the late James W. Faulkner of the Cincinnati Enquirer. One morning when I awoke the atmosphere in the car was impregnated with a highly aromatic alcoholic fragrance. Men from other cars passing through toward breakfast stepped in the aisle and looked around hopefully for the source. At last there were so many crowded into our car that Faulkner stood up on the seat and addressed them.

"Gentlemen," he said, "what you now smell was once 3-Star Hennessy brandy, the property of James William Faulkner of Cincinnati, Ohio. Last night a great tragedy occurred—the cork came out of the bottle in my suitcase. The trouble with me is I am too new-fashioned. If I had just one set of old-fashioned flannel underwear, I could wring you out a drink."

There were three principal contenders at the 1920 Democratic convention—Governor Cox, William G. McAdoo, and the then Attorney General of the United States, A. Mitchell Palmer of Pennsylvania. The Palmer people sang to the tune of Glory, Glory, Hallelujah, a song beginning, "Palmer, Palmer, Pennsylvania." This the Ohio contingent parodied with a version of its own, "All his votes are on the payroll."

McAdoo, the son-in-law of Woodrow Wilson, was a favorite of the drys in that early stage of national prohibition, and prominent among them was William Bryan, attending the convention as in a journalistic capacity. The drys contended that Cox was a wet, and after his nomination Bryan said sadly, as nearly as I can recall his exact words: "My heart is in the grave, and I must pause till it comes back to me."

HISTORY SURELY REPEATS

There was much about the atmosphere of the 1920 Democratic convention to suggest the Democratic attitude of today. Speakers lambasted the Republicans as reactionary and devoted to selfish interests. The keynoter, Homer S. Cummings, of Connecticut, later Attorney General in the Cabinet of F. D. R., declared that the GOP "had persistently served special interests and had lost touch with the spirit of the time." He called the Republican platform "the work of men concerned more with material things than with human rights."

Governor Cox in his acceptance speech at Dayton, August 7, 1920, left no doubt that he followed in the footsteps of Wilson on the issue of the League of Nations.

"Senator Harding, as the Republican candidate for the Presidency, proposed in plain words that we remain out of it," he said. "As the Democratic candidate, I am in favor of going in."

There remain many persons who believe to this day that had the Nation followed Wilson and Cox, there would have been no World War II or threat of a possible world war III.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 7, 1956

Mr. BOW. Mr. Speaker, the perils of double jeopardy to which our servicemen may be subjected in foreign courts by reason of the various status of forces agreements have not generally been noticed. We know that convicted servicemen have been reluctant or fearful to prosecute an appeal because of the possibility that thereby they may have greater punishment imposed by the higher court, but it has not been considered that under the guise of appeal the accused servicemen is actually subjected to a second trial for the same offense.

Under the common law a second trial for an offense was forbidden whether or not the accused had suffered punishment, or had been acquitted or convicted. This rule was carried into the fifth amendment to our Constitution which provides that no person shall be twice put in jeopardy of life or limb for the same offense. Many years ago the Supreme Court held that the protection against double jeopardy prevented an appeal by the Government after a verdict of acquittal.

It is true that there have occasionally been appeals in the courts of some States after an acquittal in a criminal trial, but these have been primarily to clarify or establish some rule of law that was in question. It is only in foreign courts where we have appeals of convictions by the prosecution which obviously arise out of caprice or prejudice of the prosecutor. These officials think they are better qualified to assess punishment than the court.

Last April in France an airman was sentenced to 2 months' imprisonment and 20,000 francs' fine for assault and battery. The public prosecutor almost immediately notified the Staff Judge Advocate that he had filed an appeal because in his opinion the sentence was not severe enough. It has already been demonstrated that the higher courts of France construe any appeal by the prosecutor as an official demand for increased penalty.

The Japanese are also addicted to this practice, since generally their system of law follows the civil code. It has recently been disclosed that 2 marines who were earlier sentenced, respectively, to 2 and 3 years' imprisonment, which was suspended, were tried again because the prosecution was dissatisfied with these sentences and appealed the convictions. Fortunately for them the same sentences were pronounced by the second court.

An appeal in Japan amounts to a second trial. The court has considerable latitude in reopening the case and considering new evidence. The court may impose a different sentence. This is double jeopardy. It is pure subterfuge to say that the proceedings from the indictment and trial through the last appeal is only one trial.

Even though a serviceman has been tried for an offense in a foreign court the military authorities, under the NATO Status of Forces Agreement, may try him also for any violation of rules of discipline arising from the same acts. This is an apparent double jeopardy which would be avoided if the accused had been tried in the first instance by court-martial and all degrees of the offense had been considered at one trial.

Slavery in Saudi Arabia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. MULTER. Mr. Speaker, I am pleased to take this means to make available to all Members the following item which was prepared for me by Virginia W. Brewer of the Library of Congress:

SLAVERY IN SAUDI ARABIA AND THE OFFICIAL ATTITUDE TOWARD IT

(By Virginia W. Brewer)

Despite decrees of King Ibn Saud of Saudi Arabia, made in 1936, which were supposed to abolish the trading in slaves if not slavery itself in that country, according to the report on slavery made to the Assembly of the French Union [1] by M. Emmanuel LaGraviere for the Commission on Social Affairs, at the session of November 17, 1955, not only is the practice of slavery continued, but it is increasing, and lamentable not only in itself but also because of the deplorable conditions accompanying it. An Arab official who was a leading statesman in Mecca was relieved of his duties because he denounced the manner in which the slave trade was conducted in Saudi Arabia (according to the same report).

In spite of the difficulties of making estimates, there is reason to believe that there are some 750,000 slaves in Arabia. There are numerous slave markets in Mecca. In the outskirts of Mecca the French, on a recent tour, found, slumping against the walls, beggars who had been slaves, but whose masters had driven them out because they could no longer work. Their only food was scraps; their only shelter tents made from rags, under which 7 or 8 huddled together at night for warmth.

Though Mecca appears to be the only place where slaves are displayed publicly as merchandise, in other cities and villages the sale of them continues clandestinely. Moreover, according to the same report,[2] the purchasers of slaves are to be found among the leaders of tribes—tribes numbering as many as 40,000. Those officials who disapprove of the practice, who would like to see it abolished, are in too small a minority to combat the social forces that sanction and desire its continuance.

The Secretary General of the United Nations was asked in 1948 by the Economic and Social Council to obtain information, including information from governments, to supplement material presented to the Council by the Ad Hoc Committee on Slavery, to examine the report of the Committee in the

Footnotes at end of speech.

light of the information obtained by him, and to report on it to the Council.

In 1952 he reported that he was still receiving replies to his requests to governments.[2] In 1953 Saudi Arabia was listed among the member countries of the United Nations from which no reply had yet been received; [4] and likewise in the 1954 report.[5]

In his 1953 report [6] on the subject the Secretary General noted the view expressed by the Ad Hoc Committee on Slavery (E/1938, par. 21):

"That even when all the above-mentioned information had been obtained, a complete and up-to-date survey of slavery still would not be possible unless a body of the United Nations were given authority to verify its information by appropriate means and to study such actual conditions of slavery or servitude as might exist in the world today."

In the 1954 report of the Secretary General on slavery a section is devoted to Saudi Arabia.[7] Following the form adopted in reporting on the numerous countries included in the report it indicates that of the materials collected under the resolution of the United Nations there had been for Saudi Arabia no government reply and no materials from nongovernmental organizations of Saudi Arabia.[8] The material which had been received was from the Antislavery Society, an organization associated with the United Nations on a consultative basis.

The Antislavery Society, as quoted in this report of the United Nations (E/2548), referred (as it consistently has in its various reports on the subject), to the existence of slavery in Saudi Arabia, its status there, and the sources—some secondary, some official—of its information. What the Secretary General quoted [9] in this connection is quoted in part below:

"Saudi Arabia: The Ottoman Empire claimed to have sovereignty over the greater part of Arabia, but it is doubtful whether the Sultan of Turkey really ruled over all that he claimed. In 1889 slavery was abolished by law in the Ottoman Empire, and that law applied in theory to a great part of Arabia, but was not effective in some of those countries. Turkey was defeated in the First World War (1914–18), and the Turkish colonies were ceded to the principal Allied Powers. Following that war the Hijaz, on the eastern shores of the Red Sea, which had certainly been under effective Turkish rule, was set up as an independent kingdom, and one of the first acts of the first ruler, King Hussein, was to abrogate the Ottoman law abolishing the status of slavery. He even imposed a tax of 10 percent on the sale of human beings. In due course King Hussein was defeated by King Ibn Saud, the ruler of the Nejd, the country to the east of the Hijaz, and the Hijaz and the Nejd were united under his rule in the year 1925, and given the name Saudi Arabia.

"There is no doubt about the status of slavery in Saudi Arabia. Many Europeans resident in Saudi Arabia in the past 15 years, sympathetic to the way of life of the inhabitants of that country, have testified in books written by them to that fact. Eldon Rutter, who has spent a great part of his life in Saudi Arabia, and in a lecture which Cities of Arabia, and in a lecture which he delivered to the Royal Asian Society in London in 1933, said, 'Slavery exists in every part of Arabia, except Aden, as a normal social institution, but I have only seen one slave market where slaves are displayed in a public place like merchandise. That was in Mecca in a narrow street called the Suk-el-Abed. In all the other towns and villages, including the Persian Gulf towns, the slaves are sold privately. In some places there are dealers who keep a definite stock of slaves; in other there are merely agents who dispose of any slave whom a person may wish to sell.'

Footnotes at end of speech.

"Col. Gerald de Gaury, who received high honor from King Ibn Saud, says in his book, Arabian Journey, published in 1950 (p. 89), 'Slaves are still sold in Saudi Arabia. * * * The chief market is the Sug at Suwaigua in Mecca (of which Eldon Rutter published a description), and the main route for them is to Mecca from the Yemen, to which they are brought in sailing boats from the opposite coast of Africa.' He mentions that he had heard on good authority that boys were still arriving on the Oman coast in 1947 from the Mukron coast of Baluchistan, and that girls are brought from Aleppo in Syria and sold in Arabia. These are unofficial sources of information, there is also official information which confirms the existence of slavery in Saudi Arabia by implication.

"On October 2, 1936, King Ibn Saud made a decree entitled 'The Instructions Concerning Traffic in Slaves.' Part I prohibits the importation of slaves into Saudi Arabia, as well as the enslavement of any free person; part II gives slaves rights of protection against their masters, as well as the right to buy their liberty, thereby admitting the existence of the slave status. Part III provides for the appointment of an inspector of slaves, and for the licensing of slave brokers. During the session of the ad hoc Committee on Slavery as well as during the preparation of the Secretary General's Report on Slavery (E. 2357), the United Nations addressed requests to the Government of Saudi Arabia for information on slavery. To none of these was a reply received. The inference to be drawn from this persistent silence is that the Government of Saudi Arabia did not wish to reveal the position on slavery existing within its borders."

In all fairness, it must be said that in Saudi Arabia, the largest of the Arab States, various aspects of the subject must be treated separately for a fair picture of what is often generalized as one, under the term "slavery." Slave trade, slave smuggling, slave life as an integral part of Arabic society present differing facets to the modern world.

King Abdul Aziz Ibn Saud, most important of the potentates who has recently held sway over Arabian territory—not only because of the extent of his domain, Saudi Arabia, but also because of his personality, his contacts with the West, his advanced ideas, and his record of accomplishments—undertook under article VII of the Treaty of Jedda of 1927 [10] to cooperate with the British for the suppression of the slave trade. In this he succeeded to a large extent. Although secondary sources vary, it seems from a coordination of them that probably the only parts of the Arabian Peninsula where the smuggling of slaves remains today are Oman, Yemen, and Asir.[11]

Writing in 1937, in what has been called "so authoritative and detailed a survey of slavery," Sir George MacMunn has this to say: [12]

"But taken as a whole the Arab slavery is of that benevolent kind that is very properly anathema to the antislavery gospel * * * it does not cry to high heaven for vengeance, and therefore gets a toleration which its soul-destroying effect by no means merits. Slavery in Arabia is a perfectly legal affair, sanctioned * * * by custom, and by the Moslem religion. * * * Slaves were and are part of the ancient system. * * * Hordes of slaves and slave children, often his own, appeal to an Arab, to be ruled—often kindly enough, but quite definitely ruled—fed, clothed, and supplied, and entirely unpaid. * * * Since the slave is usually friendless and homeless he has no other anchor in life save the patriarch's tent.

"No slave can leave his master. His only change, as in other slave systems, can come from being sold. In the desert, slaves are both cheaper than free labor and far less

Footnotes at end of speech.

expensive. As concubines, slave women are equally inexpensive. * * * A Moslem wife receives a dowry from the husband, that is both law and custom; and while a modern wife may be divorced easily enough, her dowry is her inalienable right and goes with her. The slave concubine may be sold off, and may even yield profit. These slave concubines, and the slave children born of them, are therefore useful assets in every way, apart from the charm just mentioned. It is not, therefore, to be expected that from within will come any great movement of conscience to rid themselves of so comfortable a system.

* * * * *

"There is nothing in Moslem religious teaching that militates against slave holding. On the contrary, the existence of slaves is especially recognized as the law of life. * * * The Koran * * * dealt with it as a recognized institution, and one can but infer that while good and fair treatment of slaves was enforced, and their liberation was considered meritorious, condemnation of the institution was not thought of.

* * * * *

"It is well to quote from Eldon Rutter's lecture of a few years ago to the Central Asia Society, because it does reassure us that a state of affairs which is impossible to remedy save in the slow march of time is not unbearable.

" 'Slavedom in Arabia is in its physical aspect a slight thing. Regarded in a material way only, the lot of a slave in Arabia is quite as happy as that of thousands of human beings in the most advanced countries of the world * * * and that is precisely why I regard slavery of the easy-going Mohammedan kind as the worst of all forms of slavery. * * * The rigg or slavery of Arabia, and the position of the abd or slave is not within the same four walls as slavery in its worst form.' "

As late as the 1930's the slave market and slave trading was a regular part of Arabian life:

"We may see, too, a few old slave women. They are recognizable by the poverty of their clothing and the lack of proper veils, but we see nothing of the several thousands of younger women slaves who are kept close in shuttered houses of the city. * * * A narrow street called the Suk-el-Abid. This is the slave market. The most desirable of the slave girls are not exposed to view. They are kept in houses where prospective buyers are taken in to view them. * * * The best slaves are sold among the citizens by private treaty this way. 'Men are unscrupulous in Arab life as elsewhere, for whereas an owner with slaves should care for their old age, there are the heartless and the hypocritical who manumit their slaves when they are too old to work and too old to sell. * * * They have no home but the mosque, and no food but what they receive in alms. * * * It is but fair to say that good masters maintain their slaves until they die * * * a sorry death * * *.'

"There is yet another repulsive blot on human manners which is rendered possible by Arab slavery. Mekka is always full of students who settle in the cities to study theology—some of these marry slave women belonging to the Arabs. Any child of these so-called marriages is born into slavery, and becomes the property of the woman's owner. The father is usually too poor to buy the woman's freedom. * * * I do not think I have anything more barbarous to report out of all I have seen and heard of Arabian slavery." [13]

MacMunn elsewhere in the same treatise had written: [14]

"The gravest and most pronounced slave-holding and slave-breeding that yet exists has its home in the Arabian countries, where the system is as old as slavery itself, and can

Footnotes at end of speech.

Footnotes at end of speech.

fade but slowly. * * * The blot is still inaccessible. * * * It has just been said that in Arabia slavery is as old as time; and still today, in this year of grace 1937, there are many hundred thousand slaves, real undisguised slaves, called by no camouflaged name and sold as chattels at their owner's will. The slaves are men and women bought in the past, and still smuggled in smaller numbers, from the black races of the Sudan and even from negro Africa by Arab and half-Arab dealers. * * * Tens of thousands have been born of slave mothers in Arabia. * * *

Nevertheless the measures that were taken by the late King of Saudi Arabia, Ibn Saud, were effective to a certain degree. In 1954, an authority writing on the Arabian Peninsula stated: "Raiding among tribes, involving slave snatching and slave marketing such as that still occurring in the Trucial Coast has been stopped in Saudi Arabia. King Ibn Saud put an end to intertribal wars." [15]

These accomplishments, great though they are in themselves, were however, distinctly limited in proportion to the regulations promulgated by him in 1936. Those were of sufficient import to alter British practices. Up to the time of their promulgation, in October 1936, the British consul at Jiddah, Saudi Arabia, had, by treaty and by consent, had the right of manumission of slaves if they came to him. We are told, however, by MacMunn, that: [16]

"In prosecution of a cooperative policy and in connection with the general activity regarding slavery of the League of Nations, the British Government has renounced that right from that day (October 2, 1936) consequent on the promulgation of slavery regulations by the King of Saudi Arabia. These regulations are immensely important in principle. In practice they depend on the extent to which the Saudi writ runs within the confines of his dominions. The principal provisions are as follows:

"It is absolutely prohibited:

"1. To import slaves from any country by sea.

"2. To import slaves by any land route, unless the importer proves by government document that the slave is recognized as such in the country from which he comes.

"3. To enslave any free person.

"4. To buy or obtain possession of any slave who has been imported or enslaved in contravention of the regulations.

"It will be evident that the above is a great step forward, but that it does not touch slave-holding because no monarch or government can go against the inherent mentality of its people * * *. The regulations * * * are, however, a considerable step in advance, and definitely support the British antislavery patrol * * *. The next step in years to come should be to * * * declare that no man or woman can be born a slave. But desert opinion is not yet ready for that."

The British antislavery patrol was still operating in 1949. We have this account of it: [17]

"In the Red Sea and the Persian Gulf slave running continued for many years [after 1907], so that as recently as 1927 Sir Austen Chamberlain stated that 'His Majesty's Government maintain a naval detachment in the Persian Gulf, one of whose duties is to do whatever may be possible to prevent slave dealing in that region, but in spite of this measure, it is not possible to abolish the traffic altogether.' Such precautions are still taken [1949]."

From the United Nations in 1954 the following account of the official attitude in Arabia to the age-old situation:

"THE PERSIAN GULF STATES [18]

"Materials from nongovernmental organizations

"The Antislavery Society: Bertram Thomas at one time Prime Minister to the Sultan of Muscat, wrote in his book The Arabs, published in 1937, 'Within Arabia itself slavery flourishes with the full support of public opinion, and any extraneous authority interfering becomes odious in the eyes of the people. It is a vested interest of immemorial respectability.' And he continues, 'Most enlightened Arabian rulers, through they doubtless privately consider that it would be a good thing if slavery were no more, dare not affront influential subjects who favor slavery and possess slaves. And short of coercive measures, which no one is likely to take, only a change of opinion—a new general attitude of mind—will ensure permanent abolition'." [19]

A year later the Antislavery Society in its chapter on Islamic Teaching on Slavery and Slavery in Arabia, reported: [20]

"The movement to unite Islam as a single political force is hampered by the appreciation by educated Muslims that the governments of the countries where slavery is an accepted institution have an attitude to humanity which is considered uncivilized by modern democracies. On the other hand many Muslims feel that it is politically inexpedient to risk alienating the feelings of those who condone slavery by too strong a reaction against it.

"These conflicting considerations have led Muslim scholars to a reexamination of their sacred teachings which has tended to bring out the strong bias of the Prophet against the institution of slavery."

When the United Nations requested a report on slavery from societies in consultative status,[21] the Antislavery Society submitted the report by Mr. Greenidge published and distributed to members in February 1954 under the title of "Memorandum on Slavery." The memorandum gave an account of the progress made in the Economic and Social Council of the United Nations up to the beginning of the present session on the question of slavery and accounts of slavery in various areas. It concluded the one on Saudi Arabia with the following statement, which was quoted by the Secretary-General of the United Nations: [22]

"Saudi Arabia * * *

"During the session of the ad hoc Committee on Slavery, as well as during the preparation of the Secretary-General's Report on Slavery (E/2357), the United Nations addressed requests to the Government of Saudi-Arabia for information on slavery. To none of these was a reply received. The inference to be drawn from this persistent silence is that the Government of Saudi-Arabia did not wish to reveal the position on slavery existing within its borders." [23]

Harvard Students to Get Indoctrination From Dr. J. Robert Oppenheimer

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. SHEEHAN. Mr. Speaker, the Chicago Tribune, in their editorial of July 20, points out that the well-known Harvard doctrine of hospitality to the intellectuals of the left is again going to be used so as to provide the students with a series of lectures on ethics and philosophy by Dr. J. Robert Oppenheimer. Dr. Oppenheimer, of course, is the man on whom the Atomic Energy Commission ruled that the evidence in his care showed "basic defects in character."

The editorial is as follows:

HARVARD'S EXPERT ON ETHICS AND MORALS

Kenneth D. Robertson, Jr., of Boston, Harvard '29, has released correspondence with Federal District Judge Charles E. Wyzanski of Boston, Harvard '27, chairman of the Harvard board of overseers. The letters relate to the appropriateness of the approval given by the overseers to the appointment of Dr. J. Robert Oppenheimer as William James lecturer on ethics and philosophy at Harvard next year. In this capacity Dr. Oppenheimer will lecture young Harvard students.

Dr. Oppenheimer is not known as a philosopher. He is a nuclear physicist who contributed to the development of the atomic bomb. In June 1954 a special Federal loyalty board ruled that he was to be judged as a security risk and that he therefore should be denied access to secret material. The Atomic Energy Commission, by a vote of 4 to 1, sustained this finding.

Among the findings which led to this pronouncement, particular emphasis was given to Dr. Oppenheimer's penchant for forming Communist associations. His former mistress was a Communist. He married the widow of a Communist. Speaking of his friends, the Atomic Energy Commission noted that "his associations with persons known to him to be Communists have extended far beyond the tolerable limits of prudence and self-restraint. * * * These associations have lasted too long to be justified as merely the intermittent and accidental revival of earlier friendships." It was also established that Dr. Oppenheimer had regularly contributed financial assistance to Communist causes.

Dr. Oppenheimer conceded during his security review that he had lied to security officers. "I invented a cock and bull story," the scientist remarked. Asked why he had done so, Dr. Oppenhimer replied, "Because I was an idiot." The AEC ruling held that the evidence demonstrated "basic defects in character."

The simple question raised by Mr. Robertson in his correspondence with Judge Wyzanski was whether a man with this background was exactly an appropriate choice to lecture in memory of William James on morals, ethics, and philosophy. Is a relationship with a Communist outside the marital bond a warrant of good morals? Is lying ethical? Are philosophers only those so lacking in sound judgment that they can, as Raymond Moley has remarked, entertain such silly delusions as that capitalism was dying or should be destroyed, or that the masters of the Soviet Union were legitimate reformers?

Judge Wyzanski showed a certain nimbleness in skirting these matters, although he finally did concede that "I do approve of his [Dr. Oppenheimer's] qualifications to hold the James lectureship." By resort to the ouija board or some other means of communication with the spirit world, to which James has passed, Judge Wyzanski was even able to vouch that "William James would have wanted Oppenheimer to hold the lectureship."

Mr. Robertson also polled Ambassador Charles E. Bohlen in Moscow, another member in absentia of the Harvard board of overseers. Remarkably enough, the man who is representing American interests against communism on its home grounds, wrote back that he would have approved Dr. Oppenheimer's appointment.

Both Judge Wyzanski and Mr. Bohlen were at pains to state that Mr. Robertson had no right to inquire into the views of any member of the board of overseers, although Dr. Nathan Pusey, president of Harvard, has described that bady as one "which directly represents alumni interests in the policies of the university."

When Mr. Robertson indicated to Judge Wyzanski that he felt that the issue should be taken to the forum of public opinion, the learned judge promptly warned him, "Pursuant to Massachusetts law in *Baker* v. *Libbey*, I warn you that I have the literary property in my own letters." This hinted a suit if the views of Judge Wyzanski were made public—certainly a rather strange proceeding in a matter of public interest in which the judge was acting in a quasi-public capacity as member of a board "which directly represents alumni interests in the policies" of Harvard university.

Judge Wyzanski is an old New Dealer, appointed to the Federal judiciary by Mr. Roosevelt. His defense of Dr. Oppenheimer as James lecturer need occasion no surprise, for he testified as a character witness in behalf of Alger Hiss at both of Hiss' trials. We do not know whether the judge reserves the literary property in this testimony. But he certainly adheres to the well-known Harvard doctrine of hospitality to the intellectuals of the left, disregarding, as he puts it, "their political complexion or the public response to them."

Discrimination Against American Citizens in the Middle East

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I include an editorial from the Washington Post of Friday, July 20, 1956. This editorial was published on a day when the House had before it the civil rights bill, strengthening United States laws against discrimination.

Every right-thinking American deplores the discrimination referred to in this editorial, which results in part from an agreement between the United States and Saudi Arabia of June 18, 1951, and believes that the United States should take the strongest stand to defend its citizens from this sort of abuse.

The editorial follows:

DISCRIMINATION IN THE EAST

It is not surprising that Arab hostility to Israel should find expression in bitter discrimination against Jews in the United States as well as in other countries. But it is surprising indeed—surprising and disquieting—to find the Government of the United States acquiescing, and even concurring, in this discrimination. The Arab League countries have joined in denying entry or transit visas to American Jews, in boycotting American Jewish businesses and in distributing anti-Semitic literature in the United States. But the most flagrant instance is to be found in Saudi Arabia where American citizens of the Jewish faith are rigidly excluded from the Dharan airbase.

The ground on which the American State and Defense Departments acquiesce in this discrimination is that the agreement between the United States and Saudi Arabia regarding the establishment of an airbase authorizes the Saudi Arabian Government to exclude any individual it considers persona non grata. This is, of course, a sovereign right of any government. But exclusion of individuals on the basis of their religious belief is not exclusion on an individual basis. And acceptance of this kind by the American Government amounts to nothing less than a breach of the constitutional prohibition against religious discrimination.

Out of deference to Saudi Arabia, the Department of Defense now screens both civilians and military personnel assigned to the airbase there in order to keep out any Americans of the Jewish faith. Thus the United States Government directly applies a religious test to Federal employment in direct contravention of the constitutional stipulation that "no religious test shall ever be required as a qualification to any office or public trust under the United States."

Not long ago the Government of Spain sought to restrict the rights of American GIs to marry in that country. The United States Government promptly protested against such discrimination, and this country's military bases in Spain were not sacrificed as a result. The American agreement with Saudi Arabia respecting an airbase is founded on mutual advantage. There need be no fear that it will be abrogated if the United States insists on a decent respect for the fundamental principles which its whole defense program is designed to protect. Renewal of the airbase agreement with Saudi Arabia is about to be negotiated. Elimination of any form of religious discrimination in official matters is important for the sake of America's conscience and prestige in the free world.

Farm Housing

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 20, 1956

Mr. HAYS of Ohio. Mr. Speaker, some people are apparently getting the impression that the housing bill reported by the Banking and Currency Committee is nothing more than a bill to expand the public housing program. Nothing could be further from the truth. I do not propose this morning to debate the merits pro and con of public housing. What I do want to emphasize is that the public housing section of H. R. 11742 is but a small part of what is truly a general omnibus housing bill. And more particularly, I would like to emphasize that it is just as much a farm housing bill as it is a public housing or urban housing bill.

Too many of our city dwelling colleagues seem to think that cities have a monopoly on housing problems. Those of us from farm districts know otherwise.

Actually, the farm housing problem is every bit as serious, if not more acute than the urban housing problem. The 1950 census showed 20 percent of farm houses were so dilapidated that they needed major repairs or needed to be completely replaced. The percentage of urban homes in this category was considerably lower. Mr. Speaker, the farm housing problem was bad enough back in 1950 when farm income was close to 100 percent of parity. With the sad deterioration in net farm income over the past 3 or 4 years, many farmers have found it even more difficult to improve the quality of their farm housing.

Section 701 of the bill would extend title V of the Housing Act of 1949 to provide for a 5-year farm-housing program.

Specifically, the bill would authorize, first, $450 million for direct farm-housing loans to be available during a 5-year period; second, an additional $10 million for contributions by the Secretary of Agriculture to prevent defaults in payments on loans for potentially ade-

quate farms, and third, an additional $50 million for grants and loans for improvements and repairs to keep houses safe and sanitary and also to encourage family-size farms.

These programs would make farm housing credit available on liberal terms and at a low cost to our farmers. It would supplement and not supplant the insured farm-loan program under the Bankhead-Jones Act. Insured loans under the Bankhead-Jones Act are helpful in the farm-housing field but they do not meet all of the need by any means. Just to give one example, Bankhead-Jones Act loans are restricted to economic family-sized farms, whereas loans under title V of the Housing Act of 1949 are not.

Actually, the bill does not provide a new loan authority. Instead it renews the increased loan authority which has accumulated since the title V loan program was launched in 1949.

The sad fact is that despite consistent congressional action each year, the administration has made the title V farm housing loan program meaningless through failure to implement it. I think this is a typical example of the present administration's failure to show any real concern over the problems facing American farmers.

Those of us who are deeply concerned with improving farm housing hope that by placing the program on a long-term basis we can induce a change of attitude on the part of the administration so that the title V program can really do its needed job.

As I see it the Rules Committee's tabling action was a blow not only against public housing but against farm housing, college housing, military housing, and just about any kind of housing you want to name. We need the farm-housing legislation in the bill just as we need many of the other sections and I deeply hope that the Rules Committee will reconsider its action.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations
